Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.

Topic 2	• Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 3	• Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.
Topic 4	• SAFE Key Structure: This section of the exam measures skills of Network Security Designers and focuses on the SAFE framework's key structural elements. It includes understanding 'Places in the Network'—the different network zones—and defining 'Secure Domains' to organize security policy implementation effectively.
Topic 5	• Network and Cloud Security: This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.
Topic 6	• User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q118-Q123):

NEW QUESTION # 118

Cloud (hybrid and multicloud) platform security policies should consider:

- A. Ignoring encryption to enhance performance
- B. The physical location of servers only
- C. The specific security features and controls offered by third-party providers
- D. Using a single cloud provider for all needs

Answer: C

NEW QUESTION # 119

Automated response actions based on telemetry reports can include:

- A. Unconditionally trusting all internal network traffic
- B. Blocking IP addresses associated with malicious activity

- C. Decreasing the sensitivity of intrusion detection systems
- D. Removing all forms of access control

Answer: B

NEW QUESTION # 120

What are key considerations when implementing an integrated cloud security architecture?

- A. Centralizing all data storage on-premises
- B. Leveraging zero-trust principles
- C. Implementing consistent security policies across environments
- D. Ensuring compatibility between different cloud services

Answer: B,C,D

NEW QUESTION # 121

An administrator received an incident report indicating suspicious activity of a user using a corporate device.

The manager requested that the credentials of user user1@cisco.com be reset and synced via the Active Directory. Removing the account should be avoided and used for further investigation on data leak. Which configuration must the administrator apply on the Duo Admin Panel?

- A. Quarantine the user from all the policies on the Policies tab, including associated devices.
- B. Disable the account on the Users tab and reset the password from the Active Directory.
- C. Delete the user in the Users tab option and sync it with the domain controller.
- D. Request the password change on the Device tab on managed devices.

Answer: B

Explanation:

To preserve the user for investigation while immediately revoking access, the correct approach is to disable the user in the Duo Admin Panel. This action blocks authentication without deleting logs or user data.

Simultaneously, resetting the password from Active Directory ensures any potentially compromised credentials are revoked.

According to SCAZT (Section 2: User and Device Security, Pages 40-44), disabling user accounts in Duo offers secure containment during security incidents while maintaining data for forensic review.

NEW QUESTION # 122

The function of a reverse proxy includes:

- A. Acting as an intermediary for requests from clients seeking resources from servers
- B. Decreasing the security of web applications
- C. Slowing down the access to web services
- D. Directly exposing internal network architecture to the internet

Answer: A
