

Quiz 2025 CompTIA Latest N10-009 Technical Training

BONUS!!! Download part of Pass4Leader N10-009 dumps for free: <https://drive.google.com/open?id=1xoBobTQZpWKE1ge5wskvmAkVMa-vfkZ>

N10-009 practice materials stand the test of time and harsh market, convey their sense of proficiency with passing rate up to 98 to 100 percent. Easily being got across by exam whichever level you are, our N10-009 practice materials have won worldwide praise and acceptance as a result. They are 100 percent guaranteed N10-009 practice materials. The content of N10-009 practice materials are based on real exam by whittling down superfluous knowledge without delinquent mistakes rather than dropping out of reality. Being subjected to harsh tests of market, they are highly the manifestation of responsibility carrying out the tenets of customer oriented

Some practice materials keep droning on the useless points of knowledge. In contrast, being venerated for high quality and accuracy rate, our N10-009 training quiz received high reputation for their efficiency and accuracy rate originating from your interests, and the whole review process may cushier than you have imagined before. Numerous of our loyal customers wrote to us to praise that the N10-009 Exam Questions are the same with the real exam questions and they passed N10-009 exam with ease.

N10-009 New Exam Bootcamp - Authentic N10-009 Exam Hub

Here, we provide you with N10-009 accurate questions & answers which will be occurred in the actual test. About explanations, the difficult issues will be along with detail explanations, so that you can easy to get the content of our CompTIA N10-009 pdf vce and have a basic knowledge of the key points. Besides, you can choose the N10-009 Vce Format files for simulation test. It can help you enhance your memory and consolidate the knowledge, thus the successful pass is no longer a difficult thing.

CompTIA Network+ Certification Exam Sample Questions (Q117-Q122):

NEW QUESTION # 117

Which of the following devices functions mainly at the data link layer of the OSI model and is used to connect a fiber-optic cable to a network interface?

- A. SFP transceiver
- B. Twinaxial cable
- C. DAC
- D. SC

Answer: A

Explanation:

An SFP (Small Form-factor Pluggable) transceiver is a modular device that provides the interface between fiber-optic or copper cabling and the networking equipment (e.g., switch or router). It operates primarily at Layer 2 (Data Link), converting optical or electrical signals into frames usable by the network device.

A). SC is a fiber connector type, not the transceiver.

B). DAC (Direct Attach Copper) is a passive copper cable assembly with fixed transceivers, not a general-purpose module.

D). Twinaxial cable is a copper medium, not an interface device.

References (CompTIA Network+ N10-009):

Domain: Networking Concepts - Transceivers (SFP, GBIC, QSFP), fiber connectivity, OSI model mapping

NEW QUESTION # 118

What type of attack occurs when attackers send fraudulent text messages pretending to be a trusted source, tricking the victim into giving up sensitive credentials?

- A. ARP spoofing
- B. Vishing
- C. Smishing
- D. DNS poisoning

Answer: C

Explanation:

Smishing (SMS phishing) occurs when attackers send fraudulent text messages pretending to be a trusted source, tricking the victim into giving up sensitive credentials. Since this came via text message, it qualifies as smishing.

* A. DNS poisoning corrupts name resolution.

* B. ARP spoofing manipulates MAC-to-IP mappings.

* C. Vishing is phishing via voice calls, not text.

References (CompTIA Network+ N10-009):

* Domain: Network Security - Social engineering, phishing types (smishing, vishing, spear phishing).

NEW QUESTION # 119

A network engineer configures the network settings in a new server as follows:

IP address = 192.163.1.15

Subnet mask = 255.255.255.0

Gateway = 192.163.1.255

The server can reach other hosts on the same subnet successfully, but it cannot reach hosts on different subnets. Which of the following is most likely configured incorrectly?

- A. Gateway
- B. Default route
- C. Subnet mask
- D. IP address

Answer: A

Explanation:

The default gateway for a network should be an IP address within the subnet, but not the broadcast address. In this case:

IP: 192.163.1.15

Subnet Mask: 255.255.255.0

This means the network range is: 192.163.1.0 - 192.163.1.255

192.163.1.255 is the broadcast address for this subnet, so it cannot be used as a gateway.

Hence, the device fails to communicate outside its subnet because it's trying to use a broadcast address as its gateway.

□ The issue is clearly with the gateway configuration.

NEW QUESTION # 120

A network technician is adding a new switch to increase capacity on the network. The technician connects the two switches using a single cable. Several hosts are moved to the new switch, but none of the hosts can access the network or internet. Which of the following should the technician do to resolve the issue?

- A. Install STP cables between the switches
- B. Set up link aggregation on the uplink ports
- C. Configure the connecting ports as trunk ports
- D. Increase the PoE budget for the switches

Answer: C

Explanation:

The correct solution is to configure the connecting ports as trunk ports. When connecting switches, the uplink ports must be configured to carry traffic for multiple VLANs (trunking), not just a single access VLAN. Without trunking, VLAN tags may be dropped, and traffic from hosts will not reach the rest of the network or internet.

B . STP cables is a misnomer - STP refers to Spanning Tree Protocol or Shielded Twisted Pair cables, neither of which solves this logical configuration issue.

C . PoE budget is irrelevant because switches and hosts in this context don't require PoE.

D . Link aggregation (LACP, EtherChannel) is for increasing bandwidth/redundancy across multiple links, not required with a single cable.

By enabling trunking on the uplink ports, the switches can pass VLAN-tagged traffic, ensuring hosts connected to the new switch have access to the same resources as those on the existing switch.

NEW QUESTION # 121

A network administrator installed a new VLAN to the network after a company added an additional floor to the office. Users are unable to obtain an IP address on the new VLAN, but ports on existing VLANs are working properly. Which of the following configurations should the administrator update?

- A. Scope size
- B. Address reservations
- C. Lease time
- D. IP helper

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

When a new VLAN is created, it typically exists on a different subnet. If DHCP servers are on a different VLAN, the network needs an IP helper address to forward DHCP requests correctly. Without it, clients in the new VLAN won't receive an IP address.

Breakdown of Options:

- * A. Scope size- Increasing the DHCP scope would not resolve the issue if requests aren't reaching the server.
- * B. Address reservations- Reservations only assign specific addresses to devices; they do not fix DHCP communication issues.
- * C. Lease time- Changing the lease time does not impact DHCP functionality across VLANs.
- * D. IP helper- Correct answer. This forwards DHCP requests across VLANs to the DHCP server.

NEW QUESTION # 122

.....

With N10-009 practice test questions you can not only streamline your exam CompTIA N10-009 exam preparation process but also feel confident to pass the challenging N10-009 Exam easily. One of the top features of CompTIA N10-009 valid dumps is their availability in different formats.
