

Quiz 2025 EXIN CDCP: Certified Data Centre Professional (CDCP) Useful New Practice Materials

What's more, part of that Lead1Pass CDCP dumps now are free: <https://drive.google.com/open?id=1etYSfUeO16lyYGrIlp2VU1SHEVAvmMtb>

Our desktop Certified Data Centre Professional (CDCP) (CDCP) practice exam software allows you to see your progress report at the end of each attempt. In this way, you find your mistakes and overcome them before the final take. Our desktop software is customizable so you can change the duration and EXIN questions of CDCP Practice Tests according to your learning requirements. Since this software requires installation on Windows computers, you can take the Certified Data Centre Professional (CDCP) (CDCP) practice exam offline.

If a person fails despite proper Certified Data Centre Professional (CDCP) CDCP test preparation and using CDCP practice exam material, Lead1Pass provides a money-back guarantee. If a person fails despite proper Certified Data Centre Professional (CDCP) CDCP test preparation and using CDCP practice exam material, Lead1Pass provides a money-back guarantee. Lead1Pass offers three months of free updates if the Certified Data Centre Professional (CDCP) exam content changes after the purchase of Certified Data Centre Professional (CDCP) valid dumps. Lead1Pass wants to save your time and money, so the authentic and accurate Certified Data Centre Professional (CDCP) CDCP Exam Questions help candidates to pass their CDCP certification test on their very first attempt.

>> New CDCP Practice Materials <<

CDCP Valid Exam Torrent & CDCP Free Pdf Demo & CDCP Actual Questions & Answers

To prepare for CDCP exam, you do not need read a pile of reference books or take more time to join in related training courses, what you need to do is to make use of our Lead1Pass exam software, and you can pass the exam with ease. Our exam dumps can not only help you reduce your pressure from CDCP Exam Preparation, but also eliminate your worry about money waste. We guarantee to give you a full refund of the cost you purchased our dump if you fail CDCP exam for the first time after you purchased

and used our exam dumps. So please be rest assured the purchase of our dumps.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).
Topic 2	• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 3	• Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 4	• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 5	• Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 6	• Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 7	• Equipment Racks: It discusses power rail • strip options, security considerations, and rack standards, properties and selection criteria.
Topic 8	• Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.
Topic 9	• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 10	• Water Supply: This topic is all about water supply techniques and application areas.
Topic 11	• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q65-Q70):

NEW QUESTION # 65

When having two non-synchronized power sources, the ATS / STS need to be of the type:

- A. Both an ATS and STS can never handle two non-synchronized sources.
- B. Both make before break or break before make can be used.
- C. Make before break.
- D. Break before make.

Answer: D

Explanation:

When having two non-synchronized power sources, the ATS / STS need to be of the type break before make, which means that the switch disconnects from one source before connecting to the other source. This prevents any short circuit, back feed, or phase mismatch that could occur if the two sources were connected simultaneously. Break before make switches are also known as open transition switches, because they create a brief interruption in the power supply during the switching process. This interruption is

usually acceptable for most ICT equipment, as they have internal power supplies or batteries that can handle the transient. However, if the interruption is not acceptable, then the two power sources need to be synchronized before switching, which requires a make before break switch, also known as a closed transition switch. Make before break switches connect to the second source before disconnecting from the first source, which ensures a seamless transfer of power without any interruption. However, make before break switches require that the two sources have the same voltage, frequency, and phase, which can be achieved by using a synchronization module or a phase-locked loop.

NEW QUESTION # 66

Mean time between failures is best considered a measure of:

- A. Size
- B. Cost
- C. Duration
- **D. Reliability**

Answer: D

Explanation:

Mean time between failures (MTBF) is a measure of the reliability of a system or component. It represents the average time that a system or component will operate before it fails. The higher the MTBF, the more reliable the system or component is. MTBF is calculated by dividing the total time of operation by the number of failures that occur during that time. MTBF is used to compare the reliability of similar systems or components, and to help with maintenance planning, inventory management, and system design.

NEW QUESTION # 67

Which type of Fire Detection Device is recommended for protecting a Data Center?

- A. Heat detector
- B. Flame detector
- **C. Smoke detector**
- D. None of the above

Answer: C

Explanation:

According to the CDCP Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

Fire Detection and Suppression Systems in a Data Center.

NEW QUESTION # 68

Which one of the following is an AC Power Quality Anomaly?

- **A. Waveform Distortion**
- B. Backup Condition
- C. Attenuation
- D. Signal Distortion

Answer: A

Explanation:

Waveform distortion is a type of AC power quality anomaly that occurs when the shape of the voltage or current waveform deviates from the ideal sinusoidal shape. Waveform distortion can be caused by nonlinear loads, such as rectifiers, inverters, variable frequency drives, and electronic devices, that draw current in pulses or harmonics. Waveform distortion can result in overheating, reduced efficiency, malfunctioning, or damage of equipment.

NEW QUESTION # 69

Starting from which Rating does the requirement of Concurrently Maintainability becomes relevant?

- A. Rated-3
- B. Rated-2
- C. Rated-1
- D. Rated-4

Answer: A

Explanation:

The requirement of Concurrently Maintainability becomes relevant starting from Rated-3, according to the Uptime Institute Tier Classification System¹. Concurrently Maintainability means that any component or system in the data centre can be maintained or replaced without affecting the availability of the IT equipment.

This requires having redundant capacity components and multiple independent distribution paths serving the IT equipment. Rated-3 data centres are designed to achieve Concurrently Maintainability and have a minimum uptime of 99.982%. Rated-4 data centres also have Concurrently Maintainability, but they also have Fault Tolerance, which means that they can withstand any single unplanned event without affecting the availability of the IT equipment. Rated-4 data centres have a minimum uptime of 99.995%. Rated-1 and Rated-2 data centres do not have Concurrently Maintainability, as they have only one distribution path serving the IT equipment and no redundant capacity components. Rated-1 data centres have a minimum uptime of 99.671% and Rated-2 data centres have a minimum uptime of 99.741%.

NEW QUESTION # 70

.....

When you know you will enjoy one year free update after purchase, you may consider how to get the latest EXIN CDCP exam torrent. Here, we will tell you, the Lead1Pass system will send the update CDCP exam dumps to you automatically. You can pay attention to your payment email. If you find there is update and do not find any update email, do not worry, you can check your spam. If there is still not, please contact us by email or online chat. Besides, if you have any questions about EXIN CDCP, please contact us at any time. Our 7/24 customer service will be always at your side and solve your problem at once.
