

Quiz 2025 EXIN CDCP–High Hit-Rate Exam Dumps

Exin-CDCP Dumps Questions

If you are searching for Exin-CDCP Dumps Questions, you've come to the right place. ExamDumps.co has the latest and updated Exin-CDCP Dumps Questions to help you to pass your actual Exin-CDCP exam on the first attempt.

ExamDumps.co, one of the best Dumps Questions websites, offers Exin-CDCP Dumps Questions with correct answers and free updates. Our [Certified Data Centre Professional Dumps Questions](#) include multiple Questions with Verified answers that come with a complete Data Centre Professional certification exam preparation solution. Exin-CDCP Dumps Questions offers unique learning and exam preparing features to assist you in exam preparation.

Our Exin-CDCP Dumps Questions contain actual exam questions with accurate answers for passing the real exam. All the Exin-CDCP Dumps Questions are according to Certified Data Centre Professional Exam knowledge points and exam objectives by top IT experts and professionals. With our Exin-CDCP Dumps Questions, you can answer the Exin Data Centre Professional certification exam correctly and pass successfully.

Exin-CDCP Questions and Answers - Guarantee Success with High Marks

Get a 100% Success guarantee to pass your Certified Data Centre Professional Exam using our updated Exin-CDCP Questions and Answers. With the Exin-CDCP exam, you'll be able to take your place in society and enjoy the world even more in the highly competitive IT age.

We refresh and validate Exin-CDCP Questions and Answers every day to keep up-to-date questions and answers. ExamDumps.co will provide you 100% valid [Exin-CDCP Questions and Answers](#) with verified answers that reflect the real Exin exam. Certified Data Centre Professional Exin-CDCP Questions and Answers provided by ExamDumps.co cover all the questions you will face in the Exin-CDCP exam.

Exin-CDCP Questions and Answers cover the latest pattern and topics used in the Exin-CDCP exam. Our Certified Data Centre Professional Exam Exin-CDCP Questions and Answers help you pass exams with high marks and also offer you to improve your knowledge.

P.S. Free 2025 EXIN CDCP dumps are available on Google Drive shared by ValidVCE: <https://drive.google.com/open?id=1kOhRoMrzygHlyKMIJ5KG6z8GIIKNpeHe>

ValidVCE made an absolute gem of study material which carries actual EXIN CDCP Exam Questions for the students so that they don't get confused in order to prepare for EXIN CDCP exam and pass it with a good score. The EXIN CDCP practice test questions are made by examination after consulting with a lot of professionals and receiving positive feedback from them. The Certified Data Centre Professional (CDCP) (CDCP) practice test questions prep material has actual EXIN CDCP exam questions for our customers so they don't face any hurdles while preparing for EXIN CDCP certification exam.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 2	• Equipment Racks: It discusses power rail • strip options, security considerations, and rack standards, properties and selection criteria.
Topic 3	• Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.

Topic 4	• Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 5	• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 6	• Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).
Topic 7	• Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 8	• Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 9	• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.
Topic 10	• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 11	• Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.

Valid CDCP Learning Materials, Reliable CDCP Test Tips

Before you decide to buy ValidVCE of EXIN CDCP exam questions, you will have a free part of the questions and answers as a trial. So that you will know the quality of the ValidVCE of EXIN CDCP Exam Training materials. The EXIN CDCP exam of ValidVCE is the best choice for you.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q49-Q54):

NEW QUESTION # 49

Starting from which Rating does the requirement of Concurrently Maintainability becomes relevant?

- A. Rated-4
- **B. Rated-3**
- C. Rated-1
- D. Rated-2

Answer: B

Explanation:

The requirement of Concurrently Maintainability becomes relevant starting from Rated-3, according to the Uptime Institute Tier Classification System¹. Concurrently Maintainability means that any component or system in the data centre can be maintained or replaced without affecting the availability of the IT equipment.

This requires having redundant capacity components and multiple independent distribution paths serving the IT equipment. Rated-3 data centres are designed to achieve Concurrently Maintainability and have a minimum uptime of 99.982%. Rated-4 data centres also have Concurrently Maintainability, but they also have Fault Tolerance, which means that they can withstand any single unplanned event without affecting the availability of the IT equipment. Rated-4 data centres have a minimum uptime of 99.995%. Rated-1 and Rated-2 data centres do not have Concurrently Maintainability, as they have only one distribution path serving the IT equipment and no redundant capacity components. Rated-1 data centres have a minimum uptime of 99.671% and Rated-2 data

centres have a minimum uptime of 99.741%.

NEW QUESTION # 50

An optical fiber cable comes with the specifications 50/125 μm .

What do the numbers represent?

- A. The first number represents the distance for a 10 Gb/s connection; the second number represents the distance for a 1 Gb/s connection.
- B. The first number represents the diameter of the core; the second number represents the actual diameter cable including the buffer and jacket.
- C. The first number represents the required distance to single-phase power cabling; the second number represents the required distance to three-phase cabling.
- **D. The first number represents the diameter of the core; the second number represents the diameter of the cladding in microns.**

Answer: D

Explanation:

Optical fiber cables are composed of a core, a cladding, and a coating. The core is the central part of the fiber that carries the light signal. The cladding is the layer surrounding the core that reflects the light back into the core and prevents signal loss. The coating is the protective layer that covers the cladding and provides mechanical strength and environmental protection. The specifications of an optical fiber cable indicate the dimensions of the core and the cladding in microns (μm), which are one millionth of a meter. For example, a

50/125 μm cable has a core diameter of 50 μm and a cladding diameter of 125 μm . The coating diameter is usually 250 μm , but it is not part of the specifications.

NEW QUESTION # 51

Does shielded twisted pair network cabling provide protection against EMF from power cables?

- **A. No, the shielding is designed for alien cross-talk between network cables, it provides no or little protection against low frequency EMF.**
- B. Yes, but only if the power cable is placed in a tre-foil cable arrangement.
- C. No, the shielding for twisted pair network cabling is for physical protection against vandalism and accidental cutting of the cable.
- D. Yes, as the shielding for twisted pair network cabling is specifically design for low frequency EMF protection.

Answer: A

Explanation:

Shielded twisted pair cables (STP) are Ethernet cables that feature additional protection against electromagnetic interference from external sources, such as radio waves, microwaves, or other network cables. This is achieved by wrapping each pair of wires with a conductive shield, usually made of foil or braided wire, and then enclosing the entire cable with another shield layer. However, this shielding is not effective against low frequency electromagnetic fields (EMF) from power cables, which can induce currents and voltages in the network cables and cause signal distortion or data loss. Low frequency EMF can only be reduced by increasing the distance between the power and network cables, or by using a tre-foil cable arrangement, which is a special configuration of three power cables twisted together to cancel out the magnetic fields they generate.

NEW QUESTION # 52

What should be considered when using a direct air handler for a data centre?

- A. The availability of three-phase power due to the high power requirements of these air handler units.
- B. Space available inside the computer rooms as the air handler space requirement for the inside the Computer room is quite large.
- C. Cost of operation as power consumption on these units tend to be higher compared to traditional air conditioning technology.
- **D. Temperature, humidity and contamination of the outdoor environment.**

Answer: D

Explanation:

Direct air handlers are a type of cooling system that use outdoor air to cool the data centre. They draw in fresh air from outside, filter it, and supply it to the data centre at the desired temperature and humidity level. Direct air handlers can reduce the energy consumption and operating costs of data centres by eliminating the need for mechanical cooling or refrigeration. However, they also have some challenges and limitations that need to be considered. One of the main factors to consider when using direct air handlers for data centres is the temperature, humidity and contamination of the outdoor environment. Depending on the location and climate of the data centre, the outdoor air may not always be suitable for cooling the data centre. For example, if the outdoor air is too hot, too humid, or too polluted, it may not provide enough cooling capacity, or it may damage the IT equipment or cause corrosion. Therefore, direct air handlers need to have sensors and controls to monitor the outdoor air quality and adjust the airflow accordingly. They may also need to have backup cooling systems or supplementary cooling devices, such as evaporative coolers or heat exchangers, to cope with extreme weather conditions or peak loads.

NEW QUESTION # 53

What is the primary reason to install a monitoring system in the data centre?

- A. To be able to collect data for capacity planning
- B. To implement automated change management
- **C. To notice abnormalities early so that actions can be taken to avoid disasters**
- D. To create a proper asset database

Answer: C

Explanation:

The primary reason to install a monitoring system in the data centre is to notice abnormalities early so that actions can be taken to avoid disasters, according to the CDCP Preparation Guide¹ and various web sources²³⁴. A monitoring system is a system that collects and analyzes data about the power, cooling, environmental, and security conditions in the data centre, and alerts the operators or managers about any issues or threats that may affect the performance, availability, or reliability of the data centre. A monitoring system can help to prevent or minimize the impact of disasters, such as power outages, fire, water damage, overheating, equipment failure, or cyberattacks, by providing timely and accurate information that enables fast and corrective action. A monitoring system can also help to improve the energy efficiency, capacity planning, and asset management of the data centre, by providing useful insights and trends that support informed decision making.
