Latest Cloud-Digital-Leader Exam Forum | Reliable Cloud-Digital-Leader Real Exam

There are a lot of advantages of our APP online version. On one hand, the online version of our Cloud-Digital-Leader exam questions can apply in all kinds of the eletronic devices. In addition, the online version of our Cloud-Digital-Leader training materials can work in an offline state. If you buy our products, you have the chance to use our study materials for preparing your exam when you are in an offline state. We believe that you will like the online version of our Cloud-Digital-Leader Exam Questions.

Google Cloud Digital Leader Sample Questions (Q292-Q297):

NEW QUESTION # 292
An organization has hired a team of data scientists and developers They want to create unique value in their business by coding an advanced machine learning model in Vertex Al Workbench Which service should the organization use to train the model?

- A. Compute Engine
- B. AutoML
- C. Custom training
- D. Prebuilt APIs

Answer: B

NEW QUESTION # 293

You are a DevOps Engineer in an E-commerce company that sells products globally, across the countries, Customers buy products, add them to carts or check-in stock from different parts of the world with different timestamps, you need to choose a database that can scale globally without any hassle and lots of developer support, it should be consistent across regions, can scale horizontally to support enormous user, automatically replicates, shards and even auto transaction pro-cessing. Which of the following database do you choose?

- A. Cloud SQL
- B. Cloud Firestore.
- C. Cloud Storage.
- D. Cloud Spanner

Answer: D

Explanation:
Explanation
Cloud Spanner:
Fully managed relational database with unlimited scale, strong consistency, and up to 99.999% availability.
- Get all the benefits of relational semantics and SQL with unlimited scale
- Start at any size and scale with no limits as your needs grow
- Enjoy high availability with zero scheduled downtime and online schema changes
- Deliver high-performance transactions with strong consistency across regions and continents
- Focus on innovation, eliminating manual tasks with capabilities like automatic sharding Automatic sharding Cloud Spanner optimizes performance by automatically sharding the data based on request load and size of the data. As a result, you can spend less time worrying about how to scale your database and instead focus on scaling your business.
Strong transactional consistency
Purpose-built for external, strong, global transactional consistency.
Regional and multi-regional configurations
No matter where your users may be, apps backed by Cloud Spanner can read and write up-to-date strongly consistent data globally Additionally, when running a multi-region instance, your database is able to survive a regional failure, and offers industry-leading 99.999% availability.
Online schema changes with no downtime
Cloud Spanner users can make a schema change, whether it's adding a column or adding an index while serving traffic with zero downtime. Hence you now have the flexibility to adapt your database to your business needs without compromising on the availability of your application.

NEW QUESTION # 294
What DevOps practice should an organization use when developing their application to help minimize disruption caused by bugs?

- A. Implement large changes together to make rolling back easier when bugs appear
- B. Prioritize fixing large bugs during production because they are easier to review
- C. Implement small changes incrementally to reduce recovery time when bugs appear
- D. Pause production until all bugs have been eliminated

Answer: C

Explanation:
One of the key principles of DevOps is to release changes frequently and in small batches. This helps to reduce the risk of disruption caused by bugs. If a bug is introduced in a small change, it is easier to identify and fix the bug without affecting a large number of users.

NEW QUESTION # 295
A large organization is struggling to manage their cloud costs effectively. They want to increase vis-ibility into cloud costs. Which cost management approach should the organization use?

- A. Appoint a single person to monitor cloud spending across the organization.
- B. Increase monitoring of on-premises infrastructure and services.
- C. Establish a partnership between finance, technology, and business teams.
- D. Review any cloud spending that exceeds the organization's error budget.

Answer: C

Explanation:
Explanation
Because cross-team partnerships are part of the visibility cost management strategy.

NEW QUESTION # 296
Your organization wants to run a container-based application on Google Cloud. This application is expected to increase in complexity. You have a security need for fine-grained control of traffic between the containers.
You also have an operational need to exercise fine-grained control over the application's scaling policies.
What Google Cloud product or feature should your organization use?

- A. Compute Engine virtual machines
- B. Cloud Run
- C. App Engine
- D. Google Kubernetes Engine cluster

Answer: D

Explanation:
Google Kubernetes Engine GKE seems a better fit since the requirement is for "security need for fine-grained control of traffic between the containers" and "fine-grained control over scaling policies". Such level of control is easier on GKE that Cloud Run.
Text Description automatically generated

When it comes to managed Kubernetes services, Google Kubernetes Engine (GKE) is a great choice if you are looking for a container orchestration platform that offers advanced scalability and configuration flexibility. GKE gives you complete control over every aspect of container orchestration, from networking, to storage, to how you set up observability—in addition to supporting stateful application use cases. However, if your application does not need that level of cluster configuration and monitoring, then fully managed Cloud Run might be the right solution for you.

Fully managed Cloud Run is an ideal serverless platform for stateless containerized microservices that don't require Kubernetes features like namespaces, co-location of containers in pods (sidecars) or node allocation and management.
