## IBM C1000-130 Practice Questions

### IBM Cloud Pak for Integration V2021.2 Administration

Order our C1000-130 Practice Questions Today and Get Ready to Pass with Flying Colors!

### C1000-130 Practice Exam Features | QuestionsTube

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

<https://www.questionstube.com/exam/c1000-130/>

At QuestionsTube, you can read C1000-130 free demo questions in pdf file, so you can check the questions and answers before deciding to download the IBM C1000-130 practice questions. These free demo questions are parts of the C1000-130 exam questions. Download and read them carefully, you will find that the C1000-130 test questions of QuestionsTube will be your great learning materials online. Share some C1000-130 exam online questions below.

1.Red Hat OpenShift GitOps organizes the deployment process around repositories.

P.S. Free & New C1000-130 dumps are available on Google Drive shared by VerifiedDumps: [https://drive.google.com/open?id=1vXERdVY2\\_k3topgZ17MgV3dzVkzyasDV](https://drive.google.com/open?id=1vXERdVY2_k3topgZ17MgV3dzVkzyasDV)

By practicing our C1000-130 exam braindumps, you will get the most coveted certificate smoothly. Before getting ready for your exam, having the ability to choose the best C1000-130 practice materials is the manifestation of wisdom. Our C1000-130 training engine can help you effectively pass the exam within a week. That is also proved that we are worldwide bestseller. Come and buy our C1000-130 study dumps, you will get unexpected surprise.

Free IBM C1000-130 exam questions demo download facility, affordable price, 100 percent IBM C1000-130 exam passing money back guarantee. All these three IBM C1000-130 exam questions features are designed to help you in IBM C1000-130 Exam Preparation and enable you to pass the final IBM C1000-130 certification exam easily.

## Pass Guaranteed Quiz IBM - C1000-130 - IBM Cloud Pak for Integration V2021.2 Administration Updated Exam Collection Pdf

With our IBM C1000-130 study materials, you can make full use of those time originally spent in waiting for the delivery of exam files so that you can get preparations as early as possible. There is why our IBM C1000-130 learning prep exam is well received by

the general public.

## IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q73-Q78):

### NEW QUESTION # 73

If the App Connect Operator is installed in a restricted network, which statement is true?

- A. Persistent Claim storage can not be used for BAR files.
- B. Only Ephemeral storage is supported for BAR files.
- C. Simple Storage Service (S3) can not be used for BAR files.
- D. Ephemeral storage can not be used for BAR files.

**Answer: C**

### NEW QUESTION # 74

An administrator is deploying Cloud Pak for Integration (CP4I) onto an existing OpenShift cluster which is already being used for other IBM Cloud Paks. What is one way the administrator can restrict the CP4I components to only use the amount of VPCs to which they have been entitled?

- A. More information is required.
- B. Configure the MaxLicenseDeployment environment variable for the CP4I Operator to a value less than or equal to the VPCs of license entitlement.
- C. VPCs are shared across all IBM Cloud Paks, so this is not necessary.
- D. Only deploy CP4I to a namespace enforced by Kubernetes CPU quota limits, where the limit is less than the VPCs of license entitlement.

**Answer: B**

Explanation:

IBM Cloud Pak for Integration (CP4I) is licensed based on Virtual Processor Cores (VPCs), and administrators must ensure that CP4I does not exceed the entitled number of VPCs when deployed on a shared OpenShift cluster.

One of the official methods to enforce license usage limits in CP4I is by setting the MaxLicenseDeployment environment variable in the CP4I Operator.

How This Works:

MaxLicenseDeployment is an environment variable that can be set in the CP4I operator.

This restricts the CP4I components to only consume the specified number of Virtual Processor Cores (VPCs), ensuring compliance with licensing terms.

The value assigned should be less than or equal to the entitled VPCs to prevent over-deployment.

Configuration Example:

To enforce a maximum VPC limit of 16, update the CP4I Operator's environment variables:

env:

- name: MaxLicenseDeployment

value: "16"

Why Answer A is Correct?

IBM officially recommends using MaxLicenseDeployment to enforce VPC limits.

It is a built-in mechanism for Cloud Pak licensing enforcement.

Ensures compliance without affecting other Cloud Paks running on the same OpenShift cluster.

Explanation of Incorrect Answers:

B . VPCs are shared across all IBM Cloud Paks, so this is not necessary. → Incorrect While VPCs are shared at the cluster level, IBM provides per-Pak license enforcement mechanisms like MaxLicenseDeployment.

Without setting limits, CP4I could consume more than its entitled VPCs.

C . Only deploy CP4I to a namespace enforced by Kubernetes CPU quota limits, where the limit is less than the VPCs of license entitlement. → Incorrect Kubernetes CPU quotas control resource allocation but do not enforce IBM licensing.

This does not track VPC consumption for licensing compliance.

D . More information is required. → Incorrect

The IBM licensing model is well-documented, and IBM provides clear guidance on using MaxLicenseDeployment.

No additional information is needed to determine the best approach.

#### NEW QUESTION # 75

The installation of a Cloud Pak for Integration operator is hanging and the administrator needs to debug it. Which objects on the OpenShift cluster should be checked first?

- A. The ibm-operator-catalog CatalogSource and the ClusterServiceVersion.
- B. The Log Aggregator in the openshift-operators namespace and then the subscription.
- C. The InstallPlan and the pod logs from the hanging operator.
- **D. The operator's Subscription, InstallPlan, and ClusterServiceVersion.**

**Answer: D**

#### NEW QUESTION # 76

Which statement is true about the removal of individual subsystems of API Connect on OpenShift or Cloud Pak for Integration?

- A. They can be deleted if API Connect was deployed using a single top level CR.
- B. They can be deleted regardless of the deployment methods.
- C. They cannot be deleted if API Connect was deployed using a single top level CRM.
- **D. They cannot be deleted if API Connect was deployed using a single top level CR.**

**Answer: D**

Explanation:

#### NEW QUESTION # 77

Which queue manager includes a pair of pods, one of which is the active queue manager and the other of which is a standby?

- **A. Multi-instance**
- B. Replicated Data
- C. Native HA
- D. Single Resilient

**Answer: A**

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, IBM MQ provides multiple high-availability (HA) deployment options. A multi-instance queue manager consists of a pair of pods:

One active queue manager (handling message processing).

One standby queue manager (ready to take over if the active instance fails).

The standby instance continuously monitors the active queue manager, and if it detects a failure, it automatically takes over, ensuring minimal downtime and high availability.

Why the other options are incorrect:

A . Native HA - Incorrect

Native HA (Highly Available) queue managers use persistent storage and multiple replicas for redundancy but do not rely on an active-standby pod setup. Instead, they use Raft consensus for leader election and failover.

They are different from multi-instance queue managers, which explicitly have one active and one standby pod.

C . Single Resilient - Incorrect

A Single Resilient queue manager has only one instance running and recovers using persistent storage, but it does not have a standby pod for immediate failover.

D . Replicated Data - Incorrect

"Replicated Data" is not a specific IBM MQ HA mode. Instead, Native HA queue managers use replicated data across multiple pods to ensure resilience.
