IIBA Certification of Capability in Business Analysis (CCBA) Sample Questions (Q552-Q557):

NEW QUESTION # 552

A business owner has identified a high priority requirement that needs to be implemented immediately. The project manager has asked the business analyst (BA) to perform an impact analysis of this change. Which factor will the BA need to consider?

- A. Number of systems being affected by the requirement
- B. Original source of the requirement
- C. Selection of the elicitation for the requirement
- D. Method of requirement communication

Answer: A

NEW QUESTION # 553

A business analyst (BA) is working on a data-centric IT project. The business stakeholders develop the content but do not understand the technical aspects while the IT team believes that there is no need to understand the business issues. Which deliverable will facilitate understanding between IT and the business stakeholders?

- A. Transition requirements
- B. Data dictionary
- C. Data models
- D. Non-functional requirements

Answer: B

Explanation:

Explanation

The deliverable that will facilitate understanding between IT and the business stakeholders is a data dictionary. This is because a data dictionary is a document that defines and describes the data elements, attributes, properties, formats, relationships, rules, etc. of a data-centric solution. A data dictionary can help to facilitate understanding between IT and the business stakeholders by providing a common language and reference for the data requirements and specifications. The other options are not as effective or suitable as a data dictionary. References:

CCBA Practice Test, question 119

NEW QUESTION # 554

Due to a change in regulation, a solution being implemented has a new compliance requirement that must be evaluated. The requirements change strategy focuses on total cost of change as the primary driver for decisions. The business analyst (BA) compiled the following impact assessment of the proposed change based on the new compliance requirement.

Cost of non-compliance with new requirement (regulatory fine)	\$25,000 per year
Cost to implement new compliance requirement	\$30,000 one time
Time to implement new compliance requirement	6 months
Current implementation timeframe, existing scope (without new requirement)	1 month
Opportunity cost to implement new compliance requirement	\$40,000

What recommendation should the BA make to the stakeholders based on the above information?

- A. Reject the requirement
- B. Request additional information
- C. Defer the requirement
- D. Approve the requirement

Answer: B

Explanation:

Explanation

This is because the impact assessment shows that the proposed change has a high cost, high risk, low benefit, and low urgency. Therefore, the requirement is not worth implementing at the current stage of the project, and it can be postponed to a later phase or release. Approving the requirement (A) is not a good option, as it would increase the project budget, duration, and complexity

without adding much value. Requesting additional information (B) is not necessary, as the impact assessment already provides sufficient data to make a decision.

Rejecting the requirement (D) is not advisable, as it may violate the compliance regulation and cause legal issues. References: CCBA Practice Test, CCBA Mock Test

NEW QUESTION # 555

A government agency has initiated a project to implement a customer registry that will be shared across multiple agencies. Early estimates indicate there will be hundreds of requirements. While determining the requirements traceability approach, what factor takes precedence?

- A. Cost of testing
- B. Number of stakeholders
- **C. Cost of tracing**
- D. Number of defects

Answer: C

Explanation:

The cost of tracing is the factor that takes precedence while determining the requirements traceability approach. Requirements traceability is the ability to track a requirement from its origin to its realization in a solution¹. Requirements traceability helps to ensure that the requirements are aligned with the business need, the solution scope, and the test cases. However, requirements traceability also involves effort and resources to establish and maintain the links between requirements and other artifacts. Therefore, the cost of tracing should be balanced with the benefits of traceability, and the level of traceability should be appropriate for the project context and complexity². The other factors, such as number of defects, number of stakeholders, and cost of testing, are not directly related to the requirements traceability approach, although they may influence the decision on how much traceability is needed. NEW QUESTION # 556

A project team member is confused about why a small change requires the team to look at the different enterprise-level business objectives when a desired state can be achieved easily without this analysis. What can the business analyst (6A) do to help the team member understand?

- **A. Proper analysis from different aspects is required to select the best solution.**
- B. Detailed assessments might result in future success of other projects
- C. When funding is available for extra analysis the project team need to use it.
- D. Impact analysis helps gain critical thinking to achieve the desired solution.

Answer: A

Explanation:

The BA can help the team member understand why a small change requires looking at different enterprise-level business objectives by explaining that proper analysis from different aspects is required to select the best solution. This is because proper analysis from different aspects is a technique that involves considering various factors that influence a solution selection, such as feasibility, desirability, viability, sustainability, etc. Proper analysis from different aspects can help to ensure that a solution aligns with different enterprise-level business objectives and delivers optimal value to stakeholders. The other options are not as accurate or helpful as explaining proper analysis from different aspects. Reference:
