

Quiz 2025 Oracle Useful 1z0-915-1 Exam Tutorial

P.S. Free & New 1z0-915-1 dumps are available on Google Drive shared by PracticeMaterial: <https://drive.google.com/open?id=1WODLRUAj48FM1LR75yI-RDxfc1jqEFxM>

PracticeMaterial has designed Oracle 1z0-915-1 pdf dumps format that is easy to use. Anyone can download the Oracle 1z0-915-1 pdf questions file and use it from any location or at any time. Oracle PDF Questions files can be used on laptops, tablets, and smartphones. Moreover, you will get actual Oracle 1z0-915-1 Pdf Dumps file.

Oracle 1z0-915-1 Exam Syllabus Topics:

Topic	Details
Topic 1	Describe the architecture of the HeatWave cluster, adding a HeatWave cluster to a DB system, and determine whether a query is offloaded to HeatWave cluster for execution.
Topic 2	Provisioning and Connecting DB systems: For system administrators and database engineers, this part of the exam covers identifying VCN requirements for provisioning DB systems, connecting to DB systems with OCI Bastion, connecting to DB systems with MySQL Shell, connecting to DB systems with OCI Cloud Shell, connect to DB system with OCI SQL Worksheet, and authenticate DB system with OCI Identify Access Management credentials.
Topic 3	HeatWave Cluster: For database performance specialists and cloud architects, this section of the exam covers
Topic 4	MySQL HeatWave Service: For database administrators, cloud architects, and DevOps engineers, this section of the exam covers identifying key features and benefits, describing MySQL HeatWave architecture, defining MySQL HeatWave terminology, and identifying MySQL HeatWave limitations.
Topic 5	Read Replicas: For database architects and replication specialists, this domain of the exam covers creating and managing read replicas, describing the read replica load balancer, connecting to a read replica, etc.
Topic 6	MySQL HeatWave Configurations: For database administrators and performance tuning specialists, this part of the exam covers creating custom configurations, comparing configurations, describing the effects of changing dynamic and non-dynamic variables, and updating a DB system configuration.
Topic 7	Managing DB systems: For network administrators and cloud infrastructure specialists, this domain of the exam covers demonstrating a command of DRG and DRG Attachments, applying BGP in the OCI environment, evaluating OCI VPN Services, and validating the various FastConnect products from OCI.
Topic 8	Backing up and restoring DB systems: For database administrators and disaster recovery specialists, this section of the exam covers backing up and restoring a DB system, managing automatic backups, and performing point-in-time recovery.

Topic 9	• Inbound Replication: For database administrators and replication experts, this section of the exam covers setting up and troubleshoot inbound replication and creating channels.

1z0-915-1 Exam Fee - Best 1z0-915-1 Study Material

You want to get the most practical and useful certificate which can reflect your ability in some area. If you choose to attend the test 1z0-915-1 certification buying our 1z0-915-1 study materials can help you pass the test and get the valuable certificate. Our company has invested a lot of personnel, technology and capitals on our products and is always committed to provide the top-ranking 1z0-915-1 Study Materials to the clients and serve for the client wholeheartedly.

Oracle MySQL HeatWave Implementation Associate Rel 1 Sample Questions (Q33-Q38):

NEW QUESTION # 33

A query is not offloaded to the HeatWave cluster for execution. Which three are possible reasons? (Choose three.)

- A. The use_secondary_engine session variable is OFF.
- B. The query estimated cost is less than the query cost threshold.
- C. The user does not have privileges to access the HeatWave cluster.
- D. A required column is excluded from the RAPID secondary engine.
- E. The client is connected to the DB system instead of the HeatWave cluster.

Answer: A,D,E

Explanation:

A query may not be offloaded to the HeatWave cluster for execution due to the following reasons:

A:Theuse_secondary_enginesession variable is OFF: This setting controls whether queries should be offloaded to the secondary engine (HeatWave). B.The client is connected to the DB system instead of the HeatWave cluster: For queries to be offloaded, the client must be connected to the HeatWave cluster. E.A required column is excluded from the RAPID secondary engine: If a necessary column is not available in the HeatWave (RAPID) secondary engine, the query cannot be offloaded.

NEW QUESTION # 34

What must you do to minimize a DB system down time caused by automatic maintenance operations?

- A. Enable high availability.
- B. Create read replicas.
- C. Enable crash recovery.
- D. Add HeatWave cluster.

Answer: A

Explanation:

To minimize DB system downtime caused by automatic maintenance operations, you should enable high availability. High availability ensures that there are multiple instances of your database running in different fault domains or availability domains, reducing the impact of maintenance on the system's availability.

NEW QUESTION # 35

You want to restore a stand-alone DB system to a high-availability DB system with a point-in-time recovery. Which three are required? (Choose three.)

- A. An automatic backup taken before the selected point in time must be available.
- B. Point-in-time recovery must be enabled before the point in time to which you want to restore.
- C. A manual backup taken before the selected point in time must be available.

- D. The stand-alone DB system must remain active during the restore.
- E. Every user table must have a primary key.

Answer: A,B,C

Explanation:

To restore a stand-alone DB system to a high-availability DB system with point-in-time recovery, the following are required:

B:Point-in-time recovery must be enabled before the point in time to which you want to restore: Point-in-time recovery (PITR) must be enabled beforehand to allow restoration to a specific point in time. C.An automatic backup taken before the selected point in time must be available: You need an automatic backup from before the desired restore point. D.A manual backup taken before the selected point in time must be available:

Manual backups are also essential to ensure you can restore to the desired point in time.

NEW QUESTION # 36

The following statements execute successfully:

```
CALL sys.ML_TRAIN('ml_data.iris', 'class', NULL, @model);
```

```
SELECT @model;
```

Which three are true? (Choose three.)

- A. The target column is class.
- B. The statements validate the data set but do not create a model.
- C. The generated model handle is shown in the output.
- D. The training data set is obtained from the ml_data table in the iris schema.
- E. The statements create a classification model.

Answer: A,C,E

Explanation:

The statementsCALL sys.ML_TRAIN('ml_data.iris', 'class', NULL, @model);andSELECT @model;are used to create and retrieve a machine learning model in MySQL HeatWave AutoML. The following are true:

* The generated model handle is shown in the output(Answer B): After training the model, the handle (identifier) for the model is stored in the@modelvariable and can be retrieved with theSELECT

@model;statement.

* The statements create a classification model(Answer C): TheML_TRAINprocedure is used to create a classification model since the target column (class) indicates a classification problem.

* The target column is class(Answer E): The second argument in theML_TRAINcall specifies the target column for the machine learning model, which isclassin this case.

* ML_TRAIN Procedure Documentation

NEW QUESTION # 37

You have successfully enabled high availability of a stand-alone DB system. Which is true?

- A. The DB system performs load balancing by distributing client connections to all instances.
- B. The DB system has three instances running in different availability or fault domains.
- C. The DB system provides new port numbers on the same endpoint to connect to the secondary instances for read-only connections.
- D. The DB system provides new endpoints to connect to the secondary instances for read-only connections.

Answer: B

Explanation:

When high availability is enabled for a stand-alone DB system,the DB system has three instances running in different availability or fault domains(Answer D).

* High Availability Configuration: This setup involves creating multiple instances of the DB system across different availability or fault domains to ensure redundancy and minimize the risk of downtime due to hardware or network failures.

* Instances: Typically, there are three instances-one primary and two replicas-ensuring that the system can failover seamlessly if one instance goes down.
