NEW QUESTION # 124

You are creating an automation for a company. When a new record is created in a Microsoft Dataverse table, the automation must add the same data to an enterprise resource planning (ERP) system. The ERP system does not have an API.

You need to create the automation solution.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement	Solution
Trigger an automation to run when the new record is created.	Cloud flow Desktop flow Model-driven app
Add the data to the ERP system.	Cloud flow Desktop flow Model-driven app

Answer:

Explanation:

Requirement	Solution
Trigger an automation to run when the new record is created.	Cloud flow Desktop flow Model-driven app
Add the data to the ERP system.	Cloud flow Desktop flow Model-driven app

NEW QUESTION # 125

A company publishes a list of contacts each day as an HTML table on a web page. The company has a customer relationship management (CRM) application that runs on employee desktop devices.

You need to implement an RPA solution that reads data from the HTML table and create records in the CRM application.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
Launch a new web browser instance.	
Use the Get details of element on web page action to read data from the HTML table into a variable.	
Use the Run application action to start the CRM application.	
Use the Extract data from web page action to read data from the HTML table into a variable.	
Use a dynamic selector to save data from the HTML table into a variable.	
Use a For each loop to write data from the variable to the CRM application.	

Answer:

Explanation:

Actions	Answer area
Launch a new web browser instance.	Launch a new web browser instance.
Use the Get details of element on web page action to read data from the HTML table into a variable.	Use the Extract data from web page action to read data from the HTML table into a variable.
Use the Run application action to start the CRM application.	Use the Run application action to start the CRM application.
Use the Extract data from web page action to read data from the HTML table into a variable.	
Use a dynamic selector to save data from the HTML table into a variable.	
Use a For each loop to write data from the variable to the CRM application.	Use a For each loop to write data from the variable to the CRM application.
