Quiz 2025 SAP C_BW4H_2505: SAP Certified Associate - Data Engineer - SAP BW/4HANA–Reliable Valid Exam Testking

Our SAP C_BW4H_2505 exam dumps give help to give you an idea about the actual SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) exam. You can attempt multiple SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) exam questions on the software to improve your performance. UpdateDumps has many SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) practice questions that reflect the pattern of the real SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) exam. UpdateDumps allows you to create a SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) exam dumps according to your preparation. It is easy to create the SAP C_BW4H_2505 practice questions by following just a few simple steps. Our C_BW4H_2505 exam dumps are customizable based on the time and type of questions.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP BW • 4HANA Project and the Modeling Process:This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
Topic 2	• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.

Topic 3	• Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
Topic 4	• Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.
Topic 5	• SAP BW • 4HANA Modeling:This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.

C_BW4H_2505 Real Exams | Actual C_BW4H_2505 Test Pdf

It is common in modern society that many people who are more knowledgeable and capable than others finally lost some good opportunities for development because they didn't obtain the C_BW4H_2505 certification. The prerequisite for obtaining the C_BW4H_2505 Certification is to pass the exam, but not everyone has the ability to pass it at one time. But our C_BW4H_2505 exam questions will help you pass the exam by just one go for we have the pass rate high as 98% to 100%.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q74-Q79):

NEW QUESTION # 74
Which modeling decisions may have side effects on runtime performance? Note: There are 3 correct answers to this question.

- A. Use a transitive attribute instead of an attribute that is directly assigned to a characteristic.
- B. Move a characteristic within a DataMart DataStore object to a different group.
- C. Change a time-independent attribute of a characteristic to a time-dependent attribute.
- D. Uncheck the "Write change log" property for a Stard DataStore Object.
- E. Include a characteristic from the underlying DataMart DataStore Object in the CompositeProvider instead of a navigation attribute.

Answer: A,D,E

Explanation:
When modeling data in SAP BW/4HANA, certain decisions can have significant side effects on runtime performance. Let's analyze each option:
* Option A: Use a transitive attribute instead of an attribute that is directly assigned to a characteristic.
Transitive attributes are derived attributes that depend on other attributes in the data model. Using a transitive attribute instead of a directly assigned attribute introduces additional complexity during query execution because the system must calculate the value dynamically based on the underlying relationships. This can lead to slower query performance, especially for large datasets.
* Option B: Uncheck the "Write change log" property for a Standard DataStore Object.Disabling the
"Write change log" property improves performance rather than degrading it. By not writing changes to the change log, the system reduces the overhead associated with tracking historical data. Therefore, this decision does not negatively impact runtime performance.
* Option C: Move a characteristic within a DataMart DataStore object to a different group.Moving a characteristic to a different group within a DataMart DataStore Object primarily affects the logical organization of data but does not directly impact runtime performance. The physical storage and query execution remain unaffected by such changes.
* Option D: Change a time-independent attribute of a characteristic to a time-dependent attribute.
Converting a time-independent attribute to a time-dependent one introduces additional complexity into the data model. Time-dependent attributes require the system to manage multiple versions of the attribute over time, which increases the volume of data and the computational effort required for queries. This can significantly degrade runtime performance, especially for queries involving

large datasets or frequent updates.
* Option E: Include a characteristic from the underlying DataMart DataStore Object in the CompositeProvider instead of a navigation attribute.Including a characteristic directly from the underlying DataMart DataStore Object in the CompositeProvider can improve performance compared to using a navigation attribute. Navigation attributes require additional joins during query execution, which can slow down performance. However, if the question implies replacing a navigation attribute with a direct characteristic, this decision can have positive performance implications. Conversely, if the reverse is implied (using navigation attributes instead of direct characteristics), it would degrade performance.
References:SAP BW/4HANA Modeling Guide: Explains the impact of transitive attributes, time-dependent attributes, and navigation attributes on query performance.
SAP Help Portal: Provides detailed documentation on best practices for optimizing data models in SAP BW /4HANA.
SAP Community Blogs: Experts often discuss the performance implications of various modeling decisions in real-world scenarios.
In summary, options A, D, and E involve modeling decisions that can negatively impact runtime performance due to increased computational complexity or additional joins during query execution.

NEW QUESTION # 75
What foundation is necessary to use SAP S/4HANA embedded analytics?

- A. Generated external SAP HANA Calculation Views
- B. SAP HANA optimized business content
- C. SAP Agile Data Preparation
- D. ABAP CDS view based virtual data model

Answer: D

Explanation:
SAP S/4HANA Embedded Analytics relies on theABAP CDS (Core Data Services)view-based Virtual Data Model (VDM). This foundation provides a unified layer for data consumption directly from transactional data in the S/4HANA system.
* ABAP CDS Views as Foundation:
* CDS views define the semantic model for data and integrate seamlessly with SAP S/4HANA.
* These views allow users to build advanced reporting and analytics without requiring external data movement.
* Virtual Data Model (VDM):
* VDM provides a structured framework of CDS views optimized for analytics and reporting.
* It includes analytical, transactional, and consumption views tailored for SAP Analytics tools.

NEW QUESTION # 76
In SAP Web IDE for SAP HANA, you have imported a project including an HDB module with calculation views.What do you need to do in the project settings before you can successfully build the HDB module?

- A. Change the schema name
- B. Define a package
- C. Assign a space
- D. Generate the HDI container

Answer: C

NEW QUESTION # 77
Which objects values can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

- A. Navigation attributes
- B. Display attributes
- C. Basic key figures
- D. Hierarchies
- E. Time characteristics

Answer: B,D,E

NEW QUESTION # 78

You want to access data from a table residing in an external database using an SAP HANA SDA remote source. Which other SAP HANA element is required to access its data?

- A. Replication Task
- B. Virtual Table
- C. Flowgraph
- D. Table Function

Answer: B

NEW QUESTION # 79
