SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q57-Q62):

NEW QUESTION # 57
How can you create a local table with a custom name in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. By creating an intelligent lookup
- B. By creating a persistent snapshot of a view
- C. By importing a CSV file
- D. By adding an output of a data flow

Answer: C,D

Explanation:
In SAP Datasphere, there are several ways to create a local table with a custom name, providing flexibility for data management. Two common methods are by importing a CSV file and by adding an output of a data flow. When you import a CSV file, Datasphere allows you to specify a custom name for the new local table that will store the imported data. This is a quick and straightforward way to bring external, flat-file data into Datasphere. Secondly, a data flow in Datasphere allows you to define a sequence of operations (e.g., transformations, aggregations) and write the processed data to a target. When configuring the output of a data flow, you can specify a new local table and provide it with a custom name. This method is ideal for creating structured tables as a result of complex data integration or transformation processes. These options ensure that users can create and name tables according to their specific data modeling and organizational requirements.
