

Quiz 2025 SAP Valid C-BW4H-2404: SAP Certified Associate - Data Engineer - Data Fabric Questions Exam

SAP CERTIFICATION

BTW, DOWNLOAD part of DumpTorrent C-BW4H-2404 dumps from Cloud Storage: <https://drive.google.com/open?id=1LOG-MXsOWISrLN1bzI1e9ooeYxYtSSeH>

Some candidates may think that to get a certification cost too much time and efforts, but if they find the right exam materials, they will change their mind. Our C-BW4H-2404 study questions will not occupy you much time. Whenever you have spare time, you can learn and memorize some questions and answers of our C-BW4H-2404 Exam simulation. Gradually, you will learn much knowledge and become totally different from past. You will regret to miss our C-BW4H-2404 practice materials. Come to purchase our C-BW4H-2404 learning guide!

SAP C-BW4H-2404 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SAP BW4HANA Project and Modeling Process: In this topic, candidates learn about how to design and implement efficient data models within environment of the SAP BW• 4HANA.
Topic 2	<ul style="list-style-type: none">• SAP Datasphere: This part investigates the implementation of SAP Datasphere, encompassing its modeling components and the SAP BW bridge capabilities.
Topic 3	<ul style="list-style-type: none">• SAP BW Query Design: This portion encompasses the development and implementation of BW queries in the SAP BW• 4HANA environment.
Topic 4	<ul style="list-style-type: none">• Data Modeling and Design: This segment delves into the attributes and features of modeling entities within SAP BW• 4HANA and SAP HANA HDI frameworks.

Topic 5	<ul style="list-style-type: none"> • SAP BW • 4HANA Project and the Modeling Process: This segment offers direction on orchestrating SAP BW • 4HANA initiatives.
Topic 6	<ul style="list-style-type: none"> • Performance Optimization: This section scrutinizes elements associated with enhancing system efficiency.
Topic 7	<ul style="list-style-type: none"> • Fundamentals: This portion explores key terminologies, principles, and benefits of SAP BW • 4HANA built on SAP HANA technology.
Topic 8	<ul style="list-style-type: none"> • Data Acquisition into SAP BW • 4HANA: This section addresses the incorporation of diverse data origins into SAP BW • 4HANA and the methodologies for data ingestion.

C-BW4H-2404 Practice Tests | Top C-BW4H-2404 Questions

DumpTorrent SAP C-BW4H-2404 Exam Training materials can help you to come true your dreams. Because it contains all the questions of SAP C-BW4H-2404 examination. With DumpTorrent, you could throw yourself into the exam preparation completely. With high quality training materials by DumpTorrent provided, you will certainly pass the exam. DumpTorrent can give you a brighter future.

SAP Certified Associate - Data Engineer - Data Fabric Sample Questions (Q30-Q35):

NEW QUESTION # 30

You have created a custom characteristic with the technical name "COSTOBJ". Depending on the controlling area, you need to have different attribute values assigned.
How do you desing the model?

- A. Define Controlling Areas as a navigation attribute for the characteristic "COSTOBJ"
- **B. Compound the characteristic for Controlling Area with the characteristic "COSTOBJ"**
- C. Compound characteristic "COSTOBJ" with the characteristic for Controlling Area
- D. Define characteristic "COSTOBJ" as a navigation attribute for Controlling Area

Answer: B

NEW QUESTION # 31

Which recommendations should you follow to optimize BW query performance? Note: There are 3 correct answers to this question.

- **A. Use matory characteristic value variables.**
- B. Use the dereference option for reusable filters.
- **C. Use the include mode within filter restrictions.**
- D. Create linked components.
- **E. Include fewer drill-down characteristics in the initial view.**

Answer: A,C,E

Explanation:

B. Fewer drill-down characteristics in the initial view:

* Minimizing drill-down characteristics reduces the volume of data retrieved during query execution, improving performance.

C. Mandatory characteristic value variables:

* Restricting queries to smaller data subsets by requiring users to input characteristic values enhances query speed.

D. Include mode within filter restrictions:

* The include mode narrows the dataset scope, improving query performance by reducing unnecessary data retrieval.

NEW QUESTION # 32

Which of the following are possible delta-specific field for a generic DataSource in SAP ERP? Note: There are 3 correct answers to this question.

- A. Record mode
- B. Request ID
- C. Time stamp
- D. Calendar day
- E. Numeric pointer

Answer: C,D,E

NEW QUESTION # 33

"How does SAP position SAP Data Warehouse Cloud in supporting business users?"

- A. Business users can maintain process chains from SAP BW/4HANA dataflows
- B. Business users can create agile models from different sources
- C. Business users can allocate system resources without IT involvement
- D. Business users can generate SQL code that is pushed to SAP BW/4HANA.

Answer: B

Explanation:

SAP Data Warehouse Cloud is a cloud-based data service that enables business users to create agile models from different sources and access data in real time. Business users can use the graphical user interface or the SQL editor to create data models, join data from various sources, and enrich data with business semantics. Business users can also use SAP Analytics Cloud to visualize and analyze data from SAP Data Warehouse Cloud. SAP Data Warehouse Cloud supports business users by providing self-service capabilities, pre-built business content, and flexible consumption options.

NEW QUESTION # 34

You consider using the feature Snapshot Support for a Standard DataStore object. Which data management process may be slower with this feature than without it?

- A. Selective Data Deletion
- B. Activating Data
- C. Filling the Inbound Table
- D. Delete request from the inbound table

Answer: A

Explanation:

The feature "Snapshot Support" in SAP BW/4HANA is designed to enable the retention of historical data snapshots within a Standard DataStore Object (DSO). When enabled, this feature allows the system to maintain multiple versions of records over time, which is useful for auditing, tracking changes, or performing historical analysis. However, this capability comes with trade-offs in terms of performance for certain data management processes.

Let's evaluate each option:

* Option A: Selective Data Deletion With Snapshot Support enabled, selective data deletion becomes slower because the system must manage and track historical snapshots. Deleting specific records requires additional processing to ensure that the integrity of historical snapshots is maintained. This process involves checking dependencies between active and historical data, making it more resource-intensive compared to scenarios without Snapshot Support.

* Option B: Delete request from the inbound table Deleting requests from the inbound table is generally unaffected by Snapshot Support. This operation focuses on removing raw data before it is activated or processed further. Since Snapshot Support primarily impacts activated data and historical snapshots, this process remains efficient regardless of whether the feature is enabled.

* Option C: Filling the Inbound Table Filling the inbound table involves loading raw data into the DSO.

This process is independent of Snapshot Support, as the feature only affects how data is managed after activation. Therefore, enabling Snapshot Support does not slow down the process of filling the inbound table.

Activation processes are optimized in SAP BW/4HANA, even with Snapshot Support, to handle the creation of new records and snapshots efficiently.

* SAP Help Portal: Provides insights into how Snapshot Support works and its implications for performance.

References: In conclusion, Selective Data Deletion is the process most significantly impacted by enabling Snapshot Support in a Standard DataStore Object. This is due to the additional complexity of managing historical snapshots while ensuring data consistency during deletions.
