You can use PassLeaderVCE products to pass the Splunk Core Certified Advanced Power User (SPLK-1004) exam on the first attempt. The Splunk Core Certified Advanced Power User (SPLK-1004) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the Splunk Core Certified Advanced Power User (SPLK-1004) exam on the first attempt.

Splunk Core Certified Advanced Power User Sample Questions (Q88-Q93):

NEW QUESTION # 88

What happens to panels with post-processing searches when their base search is refreshed?

- A. The parcels are deleted.
- B. The panels are only refreshed if they have also been configured.
- C. Nothing happens to the panels.
- **D. The panels are refreshed automatically.**

Answer: D

Explanation:

When the base search of a dashboard panel with post-processing searches is refreshed, the panels with these post-processing searches are refreshed automatically (Option C). Post-processing searches inherit the scope and results of the base search, and when the base search is updated or rerun, the post-processed results are recalculated to reflect the latest data.

NEW QUESTION # 89

How can an underlying search be optimized to improve dashboard performance?

- A. Use the transaction command instead of stats.
- B. Use NOT expressions to filter results.
- C. Convert the search to an inline search.
- **D. Limit the results to a specific time window.**

Answer: D

Explanation:

One of the most effective ways to enhance dashboard performance in Splunk is by narrowing the time range of the underlying searches. Limiting the search to a specific time window reduces the amount of data Splunk needs to process, leading to faster search execution and improved dashboard responsiveness.

According to Splunk Documentation:

"One of the most effective ways to limit the data that is pulled off from disk is to limit the time range. Use the time range picker or specify time modifiers in your search to identify the smallest window of time necessary for your search." Reference: Quick tips for optimization - Splunk Documentation

NEW QUESTION # 90

How is a multivalue field treated from `product="a, b, c, d"`?

- **A. ... | `makemv delim="," product`**
- B. ... | `makemv delim{product, ","}`
- C. ... | `eval mvexpand{makemv{product, ","}}`
- D. ... | `mvexpand product`

Answer: A

Explanation:

The `makemv` command with `delim=","` is used to split a multivalue field like `product="a, b, c, d"` into separate values, making it easier to manipulate each value individually.

NEW QUESTION # 91

Which of the following is not a common default time field?

- **A. `date_zone`**
- B. `date_day`
- C. `date_year`
- D. `date minute`

Answer: A

Explanation:

In Splunk, common default time fields include `date_minute`, `date_year`, and `date_day`, which represent the minute, year, and day parts of event timestamps, respectively. `date_zone` (Option A) is not recognized as a common default time field in Splunk. The

platform typically uses fields like `_time` and various `date_*` fields for time-related information but does not use `date_zone` as a standard time field.

NEW QUESTION # 92

Which search generates a field with a value of "hello"?

- A. `| Makerresults field="hello"`
- B. `| Makerresults | fields"hello"`
- C. `| Makerresults | eval field =make{"hello"}`
- D. `| Makerresults | eval field="hello"`

Answer: D

Explanation:

To generate a field with a value of "hello" using the `makerresults` command in Splunk, the correct syntax is `| makerresults | eval field="hello"` (Option C). The `makerresults` command creates a single event, and the `eval` command is used to add a new field (named "field" in this case) with the specified value ("hello"). This is a common method for creating sample data or for demonstration purposes within Splunk searches.

NEW QUESTION # 93

.....
