

Quiz 2025 Tableau Pass-Sure Desktop-Specialist: New Tableau Desktop Specialist Exam Exam Pass4sure

What's more, part of that DumpsValid Desktop-Specialist dumps now are free: <https://drive.google.com/open?id=1YEF9Nou5-1CCb5btGryUnix7BjIsc0N>

You can attempt the Desktop-Specialist test multiple times to relieve exam stress and boosts confidence. Besides Windows, DumpsValid Tableau Desktop-Specialist web-based practice exam works on iOS, Android, Linux, and Mac. You can take Tableau Desktop Specialist Exam (Desktop-Specialist) practice exams (desktop and web-based) of DumpsValid multiple times to improve your critical thinking and understand the Desktop-Specialist test inside out. DumpsValid has been creating the most reliable Tableau Dumps for many years. And we have helped thousands of Tableau aspirants in earning the Desktop-Specialist certification.

Topics of Tableau Desktop-Specialist: Tableau Desktop Specialist Exam

Candidates must know the exam topics before they start preparation. Because it will help them to hit the core. **Tableau Desktop Specialist exam tests** will include the following topics:

- Determine which controls to design and implement that will ensure cost optimization
- Determine a new cloud architecture for an existing solution
- Determine security requirements and controls when designing and implementing a solution
- Determine a strategy to improve the security of an existing solution
- Determine how to improve the deployment of an existing solution
- Determine a deployment strategy to meet business requirements when designing and implementing a solution
- 3 *Migration Planning*
 - Determine how to design networks for complex organizations (for example, an organization with varying compliance requirements, multiple business units, and varying scalability requirements)
 - Select migration tools and/or services for new and migrated solutions based on detailed Tableau knowledge
 - Select a cost-effective pricing model for a solution
 - Determine a solution design and implementation strategy to meet reliability requirements
 - Determine a strategy to improve the performance of an existing solution
 - Determine a solution design to ensure business continuity
- Determine how to design a multi-account Tableau environment for complex organizations (for example, an organization with varying compliance requirements, multiple business units, and varying scalability requirements)
- 2 *Design for New Solutions*
 - Determine cross-account authentication and access strategy for complex organizations (for example, an organization with varying compliance requirements, multiple business units, and varying scalability requirements)
 - Identify opportunities to reduce cost in an existing solution
- 5 *Continuous Improvement for Existing Solutions*
 - Determine a solution design to meet performance objectives
 - Determine a strategy for migrating existing on-premises workloads to the cloud
- 4 *Cost Control*

Tableau Desktop-Specialist Certification Exam tests candidates on their ability to use Tableau Desktop software to connect to and analyze data, create and publish interactive visualizations, and perform various data analysis tasks. Desktop-Specialist exam consists of 36 multiple-choice questions, and candidates are given two hours to complete it. Desktop-Specialist exam fee is \$100, and candidates can take the test online or in-person at a testing center.

Valid Desktop-Specialist Exam Pattern | Desktop-Specialist Verified Answers

Now passing Tableau certification Desktop-Specialist exam is not easy, so choosing a good training tool is a guarantee of success. DumpsValid will be the first time to provide you with exam information and exam practice questions and answers to let you be fully prepared to ensure 100% to pass Tableau Certification Desktop-Specialist Exam. DumpsValid can not only allow you for the first time to participate in the Tableau certification Desktop-Specialist exam to pass it successfully, but also help you save a lot of valuable time.

Tableau Desktop-Specialist (Tableau Desktop Specialist) Exam is a certification exam designed for individuals who are interested in becoming experts in Tableau Desktop, a powerful data visualization and business intelligence tool. Desktop-Specialist exam is perfect for those who want to demonstrate their knowledge and skills in using Tableau Desktop to create insightful reports, dashboards, and visualizations that can help organizations make data-driven decisions.

Tableau Desktop Specialist Exam Sample Questions (Q260-Q265):

NEW QUESTION # 260

Which three statements accurately describes the capabilities of dashboard actions? Choose three.

- A. Can be set to Filter, Highlight, or Go to URL
- B. Can have multiple source and target sheets
- C. Can be set to run on Hover, Select, or Menu
- D. Can be set to be triggered on a data value
- E. Can be set to dynamically update when a workbook opens

Answer: A,B,C

Explanation:

Dashboard actions in Tableau are interactive elements that can be used to create a more dynamic experience.

These actions can be set to filter data on the dashboard, highlight specific elements, or even direct the user to a URL when interacting with a visualization. They can be triggered by user interaction such as hover, selection, or accessing a context menu.

Moreover, dashboard actions can have multiple source sheets (where the action originates) and target sheets (where the action takes effect), allowing for a complex interactivity between different parts of the dashboard.

NEW QUESTION # 261

Which of the following is NOT a valid official data source in Tableau Desktop?

- A. SAP HANA
- B. PostgreSQL
- C. Google Firebase
- D. Amazon Redshift

Answer: D

Explanation:

Explanation

Presently, there is no official way to connect your data in Firebase directly with Tableau Desktop.

A workaround however can be to export your Firebase data into Google BigQuery, and then connect it to Tableau Desktop.

But then again, it is a workaround and not an official out-of-the-box solution.

The following are the available Data sources available as of now:

* Server

* File

NEW QUESTION # 262

If you have a dashboard and are displaying its filter, how can you rearrange it?

- A. By clicking on the 2 lines on top and dragging the filter.

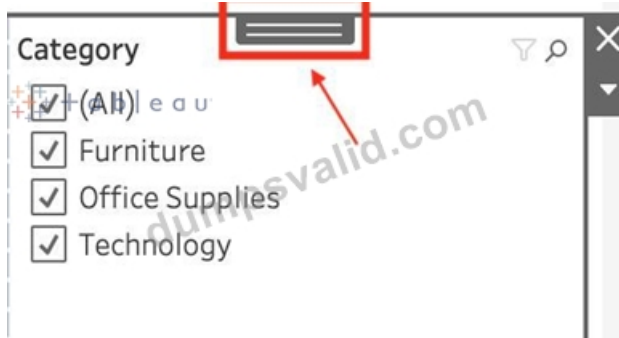

- B. By clicking anywhere inside the filter and dragging it.
- C. By clicking on the filter title and dragging it.
- D. By clicking on the dropdown and dragging the filter

Answer: A

Explanation:

Explanation

You can drag the filter by clicking on the 2 lines on top, and then dragging the filter as shown:

NEW QUESTION # 263

Is it possible to add both a Dashboard and a Worksheet at the same time to a Story Point in Tableau?

- A. Yes
- B. No

Answer: B

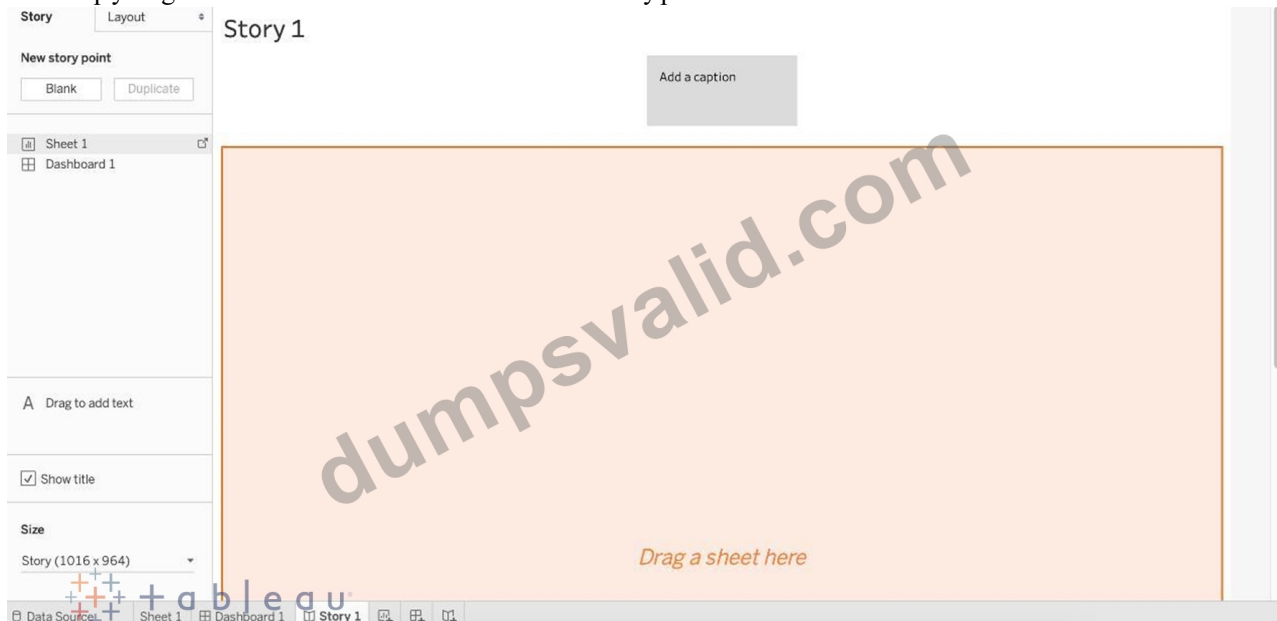

Explanation:

Explanation

This is a tricky question. We are talking about story POINTS, and not entire stories in the question.

To create a story, lets say I have a blank story with 1 dashboard and 1 worksheet.

I can simply drag the dashboard into the view to create a new story point.

Now, if I try to adjust the worksheet beside it in this same view, I cannot. See below:

The only option available is to replace the existing view. Therefore, the answer is NO since they both cannot be added.
Read more about stories in Tableau: https://help.tableau.com/current/pro/desktop/en-us/story_create.htm

NEW QUESTION # 264

The Shape option is available for which two views? Choose two.

- A. Heat maps
- B. Packed bubbles
- C. Scatter plots
- D. Side-by-side circles

Answer: B,C

Explanation:

The Shape option is available for scatter plots and packed bubbles views. The Shape option allows you to change the shape of marks in the view by selecting from a predefined set of shapes or adding custom shapes. You can access the Shape option by placing any field on Shape on the Marks card⁴ Scatter plots are views that show the relationship between two numerical variables by plotting them as coordinates on a Cartesian plane. You can create a scatter plot by placing at least one measure on Columns and at least one measure on Rows on the Marks card. You can then use Shape to assign different shapes to different categories or segments in your data⁵ Packed bubbles are views that show hierarchical data as a set of nested circles. Each circle represents a dimension member and its size is proportional to a measure value. You can create a packed bubble chart by placing one or more dimensions on Detail and one measure on Size on the Marks card. You can then use Shape to change the shape of circles to other shapes such as squares or stars⁶ The other options are not valid views for using the Shape option. Side-by-side circles are views that show proportions of a whole by using circles with different angles and sizes arranged horizontally or vertically. You can create a side-by-side circle chart by placing one dimension on Columns or Rows and one measure on Angle and Size on the Marks card. You cannot use Shape to change the shape of circles in this view⁷ Heat maps are views that show the distribution of two or more measures by using a color gradient and size. You can create a heat map by placing one or more dimensions on Columns and Rows and two measures on Color and Size on the Marks card. You cannot use Shape to change the shape of marks in this view⁸
