EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

Question:

A company is looking for a continuous data protection solution that can provide any point-in-time recovery. Which Dell solution is most suitable for this requirement?

- A. Dell SRDF
- B. Dell Cloud Tier
- C. Dell RecoverPoint
- D. Dell TimeFinder SnapVX

Answer: C

Explanation:

Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provide any point-in-time recovery of data. It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.

* Dell SRDF (Symmetrix Remote Data Facility): Provides synchronous/asynchronous replication, not CDP.

* Dell TimeFinder SnapVX: Creates point-in-time snapshots but doesn't offer continuous journaling.

* Dell Cloud Tier: Used for archiving older data to the cloud.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Replication and CDP.

NEW QUESTION # 28

Question:

A company needs to ensure high availability for its applications and minimize downtime in case of a disk failure. The current storage configuration is a RAID 0 array with SSDs. Which RAID level is most cost effective and would provide the necessary data protection without significant performance degradation?

- A. Maintain the existing RAID 0 configuration with SSDs
- B. Migrate to a RAID 5 array with SSDs for parity-based protection
- C. Implement a RAID 1 array with SSDs for disk mirroring
- D. Upgrade to a RAID 6 array with SSDs for dual parity protection

Answer: B

Explanation:

RAID 5 provides a cost-effective balance between:

Data protection (single parity, can tolerate one disk failure).

Performance (especially read-heavy environments).

Cost (uses fewer drives than RAID 1 or 6 for the same capacity).

* RAID 1 (B): Best for read-heavy workloads but doubles the storage needed (mirroring).

* RAID 0 (C): No protection against disk failure.

* RAID 6 (D): More protection (dual parity), but more write penalty and more disks needed.

NEW QUESTION # 29

Question:

What is the first step in a machine learning process?

- A. Selecting the type of learning
- B. Collecting the datasets

- C. Training the model
- D. Analyzing the data

Answer: B

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets:Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data:Cleaning and exploring data for patterns.

3##Selecting learning type:Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model:Using the data to build predictive models.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: AI/ML Fundamentals.

NEW QUESTION # 30

Question:

A storage system uses SSDs as a secondary cache tier in front of traditional hard drives. What is the primary goal of this configuration?

- A. To improve read performance
- B. To increase storage capacity
- C. To reduce power consumption
- D. To simplify data backup

Answer: A

Explanation:

Using SSDs as a secondary cache (sometimes called a "flash cache") helps:

Improve read performance by storing frequently accessed data in the faster SSDs.

Reduce latency for read requests because SSDs are much faster than traditional spinning hard drives (HDDs).

* Power consumption (A): SSDs do use less power, but the primary goal here is performance.

* Data backup (C): SSD cache doesn't impact backup operations.

* Storage capacity (D): This is not the main focus; the SSDs act as a cache layer only.

Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage System Caching Architectures.

NEW QUESTION # 31

Question:

An IT team needs to reduce or eliminate data frame loss during times of network congestion in their converged Ethernet network. What standard should they implement?

- A. VLAN
- B. QoS
- C. DCB
- D. NAT

Answer: C

Explanation:

Data Center Bridging (DCB) is a set of IEEE standards designed to enhance Ethernet for converged data center networks.

DCB includes priority-based flow control (PFC) to reduce frame loss during congestion.

Ensures lossless Ethernet transport, crucial for storage traffic (like FCoE).

* QoS (A) prioritizes traffic but doesn't guarantee lossless transport.

* NAT (C) translates IP addresses, not relevant to lossless transport.

* VLAN (D) segments networks logically but doesn't address congestion.
