Pdf SK0-005 Torrent, Valid SK0-005 Exam Experience

TestPDF is famous for our company made these exam questions with accountability. We understand you can have more chances getting higher salary or acceptance instead of preparing for the SK0-005 exam. Our SK0-005 practice materials are made by our responsible company which means you can gain many other benefits as well. We offer free demos of our SK0-005 Exam Questions for your reference, and send you the new updates of our SK0-005 study guide if our experts make them freely. All we do and the promises made are in your perspective.

CompTIA SK0-005 exam is a globally recognized certification that validates the skills and knowledge of server administrators. It is designed to test their understanding of server hardware and software, troubleshooting, virtualization, storage and security, as well as disaster recovery and business continuity. SK0-005 Exam is recommended for individuals who have at least 18-24 months of experience working with server hardware and software in an IT environment.

CompTIA Server+ Certification Exam Sample Questions (Q248-Q253):

NEW QUESTION # 248

Which of the following is the MOST appropriate scripting language to use for a logon script for a Linux box?

- A. Batch

- B. Java
- **C. Shell**
- D. PowerShell
- E. VBS

Answer: C

Explanation:

Shell is the most appropriate scripting language to use for a logon script for a Linux box. Shell is a generic term for a command-line interpreter that allows users to interact with the operating system by typing commands and executing scripts. Shell scripts are files that contain a series of commands and instructions that can be executed by a shell. Shell scripts are commonly used for automating tasks, such as logon scripts that run when a user logs on to a system. There are different types of shells available for Linux systems, such as Bash, Ksh, Zsh, etc., but they all share a similar syntax and functionality.

NEW QUESTION # 249

Which of the following relates to how much data loss a company agrees to tolerate in the event of a disaster?

- A. MTTR
- B. PRO
- **C. RTO**
- D. MTBF

Answer: C

Explanation:

Reference: <https://www.druva.com/blog/understanding-rpo-and-rto/>

The Recovery Time Objective (RTO) is the maximum amount of time that a company agrees to tolerate in the event of a disaster before restoring its normal operations. The RTO is based on the business impact analysis (BIA) and the criticality of the processes and data involved. The RTO helps determine the backup and recovery strategies and resources needed to minimize downtime and data loss. Reference: <https://www.ibm.com/cloud/learn/recovery-time-objective>

NEW QUESTION # 250

A server administrator needs to check remotely for unnecessary running services across 12 servers. Which of the following tools should the administrator use?

- A. DLP
- B. A sniffer
- C. Anti-malware
- **D. A port scanner**

Answer: D

Explanation:

The tool that the administrator should use to check for unnecessary running services across 12 servers is a port scanner. A port scanner is a tool that scans a network device for open ports and identifies the services or applications that are running on those ports. A port scanner can help detect any unauthorized or unwanted services that may pose a security risk or consume network resources. A port scanner can also help troubleshoot network connectivity issues or verify firewall rules.

NEW QUESTION # 251

A systems administrator is performing maintenance on 12 Windows servers that are in different racks at a large datacenter. Which of the following would allow the administrator to perform maintenance on all 12 servers without having to physically be at each server? (Choose two.)

- A. A crash cart
- **B. Remote desktop**
- C. A virtual administration console
- **D. IP KVM**

- E. A console connection
- F. Remote drive access

Answer: B,D

Explanation:

The methods that would allow the administrator to perform maintenance on all 12 servers without having to physically be at each server are remote desktop and IP KVM. Remote desktop is a feature that allows a user to access and control another computer over a network using a graphical user interface (GUI). Remote desktop can enable remote administration, troubleshooting, and maintenance of servers without requiring physical presence at the server location. IP KVM (Internet Protocol Keyboard Video Mouse) is a device that allows a user to access and control multiple servers over a network using a single keyboard, monitor, and mouse. IP KVM can provide remote access to servers regardless of their operating system or power state, and can also support virtual media and serial console functions.

NEW QUESTION # 252

A technician is building a lab to learn storage redundancy techniques. Which of the following is the MOST cost-effective method the technician can deploy?

- A. JBOD
- **B. Software RAID**
- C. FCoE
- D. Hardware RAID

Answer: B

Explanation:

Software RAID would be the most cost effective as it will use existing HDs to create the environment. Not to mention we are looking to learn storage redundancy. JBOD is the exact opposite of this.
