

Quiz 2025 WGU Network-and-Security-Foundation: Network-and-Security-Foundation Marvelous Latest Exam Camp

WGU D315 Final Exam Network and Security (Updated 2025/2026) Verified Questions and Answers

BONUS!!! Download part of ValidVCE Network-and-Security-Foundation dumps for free: <https://drive.google.com/open?id=1NJsMdm9DeR9ZBfl6LUDVWT77Phbhm-1Z>

All the advantages of our Network-and-Security-Foundation exam braindumps prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on Network-and-Security-Foundation exam. We can claim that prepared with our Network-and-Security-Foundation study guide for 20 to 30 hours, you can easy pass the exam and get your expected score. Also we offer free demos for you to check out the validity and precise of our Network-and-Security-Foundation Training Materials. Just come and have a try!

The Network-and-Security-Foundation practice questions at ValidVCE Network-and-Security-Foundation cover all the key topics and areas of knowledge necessary to get success on the first try. The product of ValidVCE is designed by professionals and is regularly updated to reflect the latest changes in the content. The ValidVCE recognizes that students may have different learning styles and preferences. Therefore, the ValidVCE offers PDF format, desktop practice exam software, and Network-and-Security-Foundation Exam Questions to help customers prepare for the Network-and-Security-Foundation exam successfully.

Authorized Network-and-Security-Foundation Certification - Network-and-Security-Foundation Trustworthy Source

Our Network-and-Security-Foundation learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our Network-and-Security-Foundation exam engine. And our professional Network-and-Security-Foundation Study Materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates after using our products have passed the Network-and-Security-Foundation exam.

WGU Network-and-Security-Foundation Sample Questions (Q36-Q41):

NEW QUESTION # 36

A start-up company wants to build its computer network by starting with the base-level resources offered by a cloud service. In this way, the company won't have to buy physical hardware but can still have complete control over operating systems and other software.

Which cloud service model should be used?

- A. Function as a Service (FaaS)
- **B. Infrastructure as a Service (IaaS)**
- C. Software as a Service (SaaS)
- D. Platform as a Service (PaaS)

Answer: B

Explanation:

Infrastructure as a Service (IaaS) provides virtualized computing resources, including virtual machines, storage, and networking, while allowing users full control over operating systems and applications. Examples include AWS EC2 and Google Compute Engine.

* SaaS provides ready-to-use applications (e.g., Google Docs).

* FaaS runs code in response to events (e.g., AWS Lambda).

* PaaS provides development environments but not full infrastructure control.

NEW QUESTION # 37

A developer is using shared functions for software code in order to reduce complexity, knowing that greater complexity and volume of code are harder to defend against attacks.

Which security principle is demonstrated in this scenario?

- A. Least privilege
- B. Least common mechanism
- **C. Economy of mechanism**
- D. Zero-trust model

Answer: C

Explanation:

The economy of mechanism principle states that security systems should be as simple and small as possible.

Reducing complexity makes security mechanisms easier to understand, audit, and defend against attacks.

* Least common mechanism reduces shared resources to limit security risks.

* Least privilege restricts access based on necessity.

* Zero-trust model assumes no implicit trust in users or devices.

NEW QUESTION # 38

An organization has experienced a series of data breaches and needs to ensure that data remains protected even if intercepted.

Which security measure should be implemented?

- A. Patch management
- **B. Data encryption**
- C. Two-factor authentication (2FA)
- D. Role-based access control (RBAC)

Answer: B

Explanation:

Data encryption protects sensitive information by encoding it into an unreadable format, ensuring that even if attackers intercept the data, they cannot decipher it without the proper decryption key. This is crucial for protecting stored and transmitted data.

- * RBAC controls user access but does not secure data in transit.
- * 2FA strengthens authentication but does not secure stored or transmitted data.
- * Patch management fixes software vulnerabilities but does not directly protect intercepted data.

NEW QUESTION # 39

An attacker uses a poisoned domain name on the domain name server to navigate users to the attacker's site. Which malicious attack strategy is represented in the scenario?

- **A. Pharming**
- B. IP address spoofing
- C. Session hijacking
- D. Brute-force attack

Answer: A

Explanation:

Pharming is an attack that manipulates the Domain Name System (DNS) to redirect users to fraudulent websites without their knowledge. Attackers poison DNS records or compromise routers to reroute traffic to malicious sites designed to steal information.

- * Brute-force attack involves password guessing, not domain manipulation.
- * IP address spoofing disguises a device's identity but does not alter DNS records.
- * Session hijacking takes over active user sessions but does not redirect websites.

NEW QUESTION # 40

A person is troubleshooting a network issue and needs to see details about network adapters and their settings. Which Windows command should be used?

- **A. ipconfig**
- B. traceroute
- C. nslookup
- D. netstat

Answer: A

Explanation:

The `ipconfig` command in Windows provides details about a computer's network adapters, including IP addresses, subnet masks, default gateways, and DNS settings. It is particularly useful for troubleshooting connectivity issues.

- * `traceroute` (or `tracert` in Windows) is used to trace the path packets take to a destination.
- * `nslookup` is used for querying DNS records.
- * `netstat` provides details about active network connections and listening ports, but not adapter configurations.

NEW QUESTION # 41

.....

Our company is a professional certification exam materials provider. We have occupied in this field more than ten years, therefore we have rich experiences in providing valid exam dumps. Network-and-Security-Foundation training materials cover most of knowledge points for the exam, and you can improve your professional ability in the process of learning. Network-and-Security-Foundation Exam Materials are high-quality, and you can improve your efficiency while preparing for the exam. We offer you free demo for Network-and-Security-Foundation exam dumps, you can have a try before buying, so that you can have a deeper understanding of what you are going to buy.
