We are not running around monetary objectives, customer satisfaction is our primary goal. VCEdumps provides best after sales services, consoles the customers worries and problems through 24/7 support. Seek the appropriate guidance at VCEdumps and get the ZDTA related help whenever you come across any problem.

Zscaler ZDTA Exam Syllabus Topics:

Topic	Details
Topic 1	Access Control Services: This area assesses Security Operations Specialists on implementing access control mechanisms including cloud app control, URL filtering, file type controls, bandwidth controls, and segmentation. It also covers Microsoft 365 policies, private application access strategies, and firewall configurations to protect enterprise resources.
Topic 2	Zscaler Digital Experience: This section evaluates Network Performance Analysts on their knowledge of Zscaler Digital Experience (ZDX), including understanding the ZDX score, architectural overview, features, functionalities, and practical use cases to optimize digital user experiences.

Topic 3	Identity Services: This section of the exam measures skills of Identity and Access Management Engineers and covers foundational identity services including authentication and authorization protocols such as SAML, SCIM, and OIDC. Candidates should understand identity administration tasks and how to manage policies and audit logs within the Zscaler platform.
Topic 4	- Cyberthreat Protection Services: This domain targets Cybersecurity Analysts and covers broad cybersecurity fundamentals and advanced threat protection capabilities. Candidates must know about malware protection, intrusion prevention systems, command and control channel detection, deception technologies, identity threat detection and response, browser isolation, and incident detection and response. - Data Protection Services
Topic 5	Risk Management: This domain measures skills of Risk Managers and Security Architects in using Zscaler's comprehensive risk management suite. Candidates are expected to understand risk capabilities, dashboards, asset and financial risk insights, vulnerability management, deception tactics, identity protection, and breach prediction analytics.
Topic 6	Zscaler Zero Trust Automation: This part measures Automation Engineers on their ability to utilize Zscaler APIs, including the One API framework, for automating zero trust security functions and integrating with broader enterprise security and orchestration tools.

Associate ZDTA Level Exam, ZDTA Exam Cost

VCEDumps provides with actual Zscaler ZDTA exam dumps in PDF format. You can easily download and use ZDTA PDF dumps on laptops, tablets, and smartphones. Our real ZDTA dumps PDF is useful for applicants who don't have enough time to prepare for the examination. If you are a busy individual, you can use ZDTA Pdf Dumps on the go and save time.

Zscaler Digital Transformation Administrator Sample Questions (Q94-Q99):

NEW QUESTION # 94

What does Advanced Threat Protection defend users from?

- A. Command injection attacks
- B. Malicious active content
- C. Large iFrames
- D. Vulnerable JavaScripts

Answer: B

Explanation:

Advanced Threat Protection (ATP) defends users from malicious active content, which includes malware, exploit kits, malicious scripts, and other forms of active content designed to compromise user systems. ATP employs multiple techniques such as sandboxing, malware scanning, and threat intelligence to detect and block these threats before they reach the user.

NEW QUESTION # 95

An administrator would like users to be able to use the corporate instance of a SaaS application. Which of the following allows an administrator to make that distinction?

- A. Endpoint DLP
- B. URL filtering with SSL inspection
- C. Cloud application control
- D. Out-of-band CASB

Answer: C

Explanation:

Cloud application controls is the feature that allows an administrator to distinguish and enforce policies specifically on the corporate instance of a SaaS application. This enables granular control, allowing users to access the approved corporate SaaS while restricting access to personal or unauthorized instances. Out-of-band CASB generally provides visibility but does not enforce real-time distinctions in this context. URL filtering with SSL inspection and Endpoint DLP serve different purposes, such as content inspection and endpoint data protection, respectively.

The study guide explains that Cloud Application Control policies identify and enforce controls based on SaaS application instances, providing precise policy enforcement aligned with corporate SaaS usage requirements.

NEW QUESTION # 96

Which of the following are types of device posture?

- A. Domain Joined, Process Check, Deception Check
- **B. Unauthorized Modification, OS Version, License Key**
- C. Certificate Trust, File Path, Full Disk Encryption
- D. Detect CrowdStrike, CrowdStrike ZTA score, First name

Answer: B

Explanation:

Types of device posture typically include attributes that reflect the security and compliance status of a device.

This includes Unauthorized Modification, which checks if the device has unauthorized changes; OS Version, verifying if the operating system is up-to-date; and License Key, confirming the validity of software licenses on the device. These attributes help in assessing device trustworthiness for access control.

Other options include some irrelevant attributes such as "First name" or product-specific detections not generally categorized as device posture in Zscaler's framework.

NEW QUESTION # 97

Fundamental capabilities needed by other services within the Zscaler Zero Trust Exchange are provided by which of these?

- A. Cyber Security Services
- **B. Platform Services**
- C. Digital Experience Monitoring
- D. Access Control Services

Answer: B

Explanation:

Platform Services provide the fundamental capabilities needed by other services within the Zscaler Zero Trust Exchange. These services include core functions such as identity management, policy management, logging, reporting, and API integrations that underpin and support the other service modules.

The study guide clarifies that Platform Services form the backbone of the Zscaler Zero Trust Exchange, enabling seamless interoperability and foundational support for security and access services.

NEW QUESTION # 98

Which of the following are types of device posture?

- A. Domain Joined, Process Check, Deception Check
- B. Unauthorized Modification, OS Version, License Key
- **C. Certificate Trust, File Path, Full Disk Encryption**
- D. Detect CrowdStrike, CrowdStrike ZTA score, First name

Answer: C
