### SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q18-Q23):

#### NEW QUESTION # 18

You have attached a system field to an input parameter of a CDS view entity as follows:

```
define view entity Z_ENTITY
```

```
with parameters
```

```
@Environment.systemField: #SYSTEM_LANGUAGE
```

```
language : spras
```

What are the effects of this annotation? (Select 2 correct answers)

- A. The value of sy-langu will be passed to the CDS view automatically when you use the CDS view in ABAP but not when you use it in another view entity.
- B. The value of sy-langu will be passed to the CDS view automatically both when you use the CDS view in ABAP and in another CDS view entity (view on view).
- C. It is no longer possible to pass your own value to the parameter.
- D. You can still override the default value with a value of your own.

**Answer: B,D**

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

\* With @Environment.systemField: #SYSTEM\_LANGUAGE, the system field sy-langu is automatically supplied as a default value for the parameter.

\* This works both in ABAP and in view-on-view scenarios (A).

\* Developers can still override this value when calling the view explicitly (B).

\* Options C and D are incorrect: system fields are not limited to ABAP only, and overriding is allowed.

Study Guide Reference: ABAP CDS Guide - System Fields in View Parameters.

#### NEW QUESTION # 19

In a booking record, how can you calculate the difference in days between the order date (type D) and the flight date (type D) of a flight?

- A. data(gv\_diff\_days) = gs\_booking-flight\_date - gs\_booking-order\_date.
- B. data(gv\_diff\_days) = conv d( gs\_booking-flight\_date - gs\_booking-order\_date ).

- C. `data(gv_diff_days) = conv d( gs_booking-order_date - gs_booking-flight_date ).`
- D. `data(gv_diff_days) = gs_booking-order_date - gs_booking-flight_date.`

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In ABAP, when calculating the difference between two date fields (type DATS), the result is directly a type i (integer) representing the difference in days.

\* Statement B is correct:

\* `data(gv_diff_days) = gs_booking-flight_date - gs_booking-order_date.`

This directly subtracts two DATS fields, resulting in an integer value for the number of days difference. No conversion is necessary.

\* Statements A and D are incorrect because the `conv d( ... )` attempts to convert the result back to a DATS type, which is invalid since the result is an integer (number of days), not a date.

\* Statement C is syntactically correct but would produce the negative of the desired value (flight date - order date). It is semantically incorrect for the use case.

This approach is consistent with ABAP for Cloud Development, which requires explicit typing, and ABAP language version strict mode, where automatic type inference is restricted.

Reference: ABAP Language Documentation - DATS arithmetic and date operations section; consistent with ABAP Cloud version restrictions.

- C. `#EC_NEEDED` is not checked by the syntax checker.

- B.  $\text{data}(\text{gv\_diff\_days}) = \text{gs\_booking-order\_date} - \text{gs\_booking-flight\_date}$ .
- C.  $\text{data}(\text{gv\_diff\_days}) = \text{conv d}(\text{gs\_booking-flight\_dategs\_booking-order\_date})$ .
- D.  $\text{data}(\text{gv\_diff\_days}) = \text{conv d}(\text{gs\_booking-order\_dategs\_booking-flight\_date})$ .
