

Quiz 2026 Salesforce Analytics-Admn-201 Perfect Reliable Exam Pattern

One of the top features of Salesforce Analytics-Admn-201 exam dumps is the Analytics-Admn-201 exam passing a money-back guarantee. In other words, your investments with Pass4SureQuiz Links to an external site. Salesforce Salesforce Certified Tableau Server Administrator exam questions are secured with the 100 Salesforce Certified Tableau Server Administrator Analytics-Admn-201 Exam passing a money-back guarantee. Due to any reason, if you did not succeed in the final Analytics-Admn-201 exam despite using Pass4SureQuiz Analytics-Admn-201 pdf questions and practice tests, we will return your whole payment without any deduction.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed. |
| Topic 2 | <ul style="list-style-type: none">• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks. |
| | |

| | |
|---------|---|
| Topic 3 | <ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process. |
| Topic 4 | <ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested. |
| Topic 5 | <ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment. |

Latest Salesforce Analytics-Admn-201 Test Format - Analytics-Admn-201 Latest Exam Review

About the dynamic change of our Analytics-Admn-201 guide quiz, they will send the updates to your mailbox according to the trend of the exam. Besides, we understand you may encounter many problems such as payment or downloading Analytics-Admn-201 practice materials and so on, contact with us, we will be there. Our employees are diligent to deal with your need and willing to do their part 24/7. They always treat customers with courtesy and respect to satisfy your need on our Analytics-Admn-201 Exam Dumps.

Salesforce Certified Tableau Server Administrator Sample Questions (Q22-Q27):

NEW QUESTION # 22

A user reports that a newly-published workbook runs slowly. What should you ask the user first to investigate the problem?

- A. Did you enable caching on the workbook?
- B. Does the workbook always run slowly or does performance vary?
- C. How many times have you opened the workbook in Tableau Server?
- **D. Does it run any faster in Tableau Desktop?**

Answer: D

Explanation:

When a user reports slow performance for a newly-published workbook on Tableau Server, troubleshooting requires isolating the cause-e.g., data source issues, server load, workbook design, or caching. The first question should establish a baseline to narrow the scope. Let's analyze this step-by-step with depth:

* Performance Context:

* A workbook's speed depends on:

* Data Source: Query complexity, size, network latency (e.g., database vs. extract).

* Workbook Design: Filters, calculations, dashboard complexity.

* Server Resources: VizQL rendering, Background load, caching.

* "Newly-published" implies it's not yet optimized or cached on the server.

* Option A (Does it run any faster in Tableau Desktop?): Correct.

* Why First: Comparing Desktop vs. Server performance is the most foundational diagnostic step:

- * Desktop Baseline: If it's slow in Desktop (local machine), the issue likely lies in the workbook (e.g., complex queries, large data) or data source (e.g., slow database)-not Server-specific.
- * Server Difference: If it's fast in Desktop but slow on Server, the problem could be server- side (e.g., resource contention, network latency to the data source from Server).
- * Practical Next Steps:
 - * Slow in Desktop: Optimize workbook (e.g., simplify calcs, use extracts).
 - * Fast in Desktop: Check Server (e.g., caching, VizQL load).
 - * Why Critical: Establishes whether the issue is inherent to the workbook/data or introduced by Server-guides all further investigation.
 - * Option B (Does the workbook always run slowly or does performance vary?): Useful but secondary.
 - * Why Not First: Variability (e.g., slow at peak times) points to server load, but without a Desktop baseline, you can't rule out workbook design. It's a follow-up question after A.
 - * Detail: Variability might suggest caching or concurrent user impact, but it assumes Server-side causation prematurely.
 - * Option C (How many times have you opened the workbook in Tableau Server?): Less relevant initially.
 - * Why Not First: Frequency of access might affect caching (first load is slower, subsequent loads faster), but it's too specific and doesn't isolate Desktop vs. Server. It's a niche follow-up.
 - * Option D (Did you enable caching on the workbook?): Misleading and incorrect.
 - * Why Not First: Caching is server-managed (e.g., VizQL cache settings via tsm data-access caching set), not a user-toggle per workbook. Users don't "enable" it-admins do. Plus, it's premature without a baseline.
- Why This Matters: Starting with Desktop performance cuts through assumptions, pinpointing whether the root cause is client-side (workbook/data) or server-side-essential for efficient resolution in production.
- Reference: Tableau Server Documentation - "Troubleshoot Performance" (https://help.tableau.com/current/server/en-us/troubleshoot_performance.htm).

NEW QUESTION # 23

You attempt to delete a user who owns content on a Tableau Server. What is the result of the delete action?

- A. The user and all of the user's content is deleted
- B. The user is deleted, and the user's content is reassigned to the project leader
- C. The user is deleted, and the user's content is reassigned to the server administrator
- **D. The user is switched to an Unlicensed site role and is NOT deleted**

Answer: D

Explanation:

Deleting a user in Tableau Server involves handling their owned content (workbooks, data sources)-let's analyze the process:

- * Deletion Rules:
 - * Ownership Check: Tableau prevents deletion if the user owns content to avoid orphaning it.
 - * Action: Instead of deleting, the user's site role is set to Unlicensed, retaining their account and content ownership.
 - * Resolution: An admin must reassign ownership (e.g., via Users > Actions > Change Owner) before deletion.
 - * Option D (User switched to Unlicensed and NOT deleted): Correct.
 - * Details: Attempting deletion (e.g., Users > Select User > Actions > Delete) triggers a check. If content exists, the user becomes Unlicensed-still in the system but unable to log in.
 - * Why: Protects data integrity-content remains accessible for reassignment.
- * Option A (Deleted, content to server admin): Incorrect.
- * Why: No automatic reassignment to the server admin-manual action is required first.
- * Option B (Deleted, content to project leader): Incorrect.
- * Why: Project leaders don't automatically inherit content-no such mechanism exists.
- * Option C (User and content deleted): Incorrect.
- * Why: Tableau avoids deleting content with the user-too destructive without explicit intent.
- Why This Matters: This safeguard prevents accidental data loss, ensuring admins manage ownership transitions deliberately.

NEW QUESTION # 24

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Type `:record_performance=yes&` at the end of the view URL, immediately before the session ID
- **B. Type `:record_performance=yes&` at the end of the view URL, immediately after the session ID**
- C. Click the Performance link in the toolbar at the top of the view
- D. Delete the session ID in the URL and reload the view

Answer: B

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append `:record_performance=yes&` to the view URL, immediately after the session ID. For example:

* Original

URL: `http://server/##/site/my-site/views/workbook/view?iid=1`

* Modified

URL: `http://server/##/site/my-site/views/workbook/view?iid=1:record_performance=yes`

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

* Option B (Type `:record_performance=yes&` at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

* Option C (Type `:record_performance=yes&` immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., `iid=1`) to function correctly.

* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" (https://help.tableau.com/current/server/en-us/perf_record.htm).

NEW QUESTION # 25

What Tableau Server authentication method should you configure to use OpenID Connect?

- **A. SAML**
- B. Local Authentication
- C. Active Directory
- D. Kerberos

Answer: A

Explanation:

Tableau Server supports multiple authentication methods, including Local Authentication, Active Directory, Kerberos, SAML, and OpenID Connect. OpenID Connect (OIDC) is an identity layer built on OAuth 2.0, commonly used for single sign-on (SSO). In Tableau Server, OIDC is implemented as a variant of SAML (Security Assertion Markup Language) authentication because both are SSO protocols managed through the same configuration workflow.

To use OpenID Connect:

* Configure Tableau Server for SAML/SSO.

* Provide an OIDC-compatible identity provider (IdP) configuration (e.g., Google, Okta).

* Set up the IdP metadata and certificates in TSM.

* Option D (SAML): Correct. Tableau Server treats OIDC as a subset of its SAML authentication framework, so you configure it under the SAML settings in TSM.

* Option A (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, not an external SSO protocol like OIDC.

* Option B (Kerberos): Incorrect. Kerberos is a network authentication protocol for Windows environments, unrelated to OIDC.

* Option C (Active Directory): Incorrect. AD uses LDAP or Kerberos, not OIDC, for authentication.

Reference: Tableau Server Documentation - "Configure SAML and OpenID Connect" (https://help.tableau.com/current/server/en-us/saml_config.htm).

NEW QUESTION # 26

To which site role can you associate the Viewer user-based license level?

- A. Creator
- B. Explorer (can publish)
- **C. Viewer**
- D. Explorer

Answer: C

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option A (Creator): Incorrect. The Creator license is for users who can create, edit, and publish content using Tableau Desktop and the web interface. It corresponds to the Creator site role, not Viewer.

Option B (Explorer (can publish)): Incorrect. This is a variation of the Explorer license, which allows users to edit and publish content within limits. It's more permissive than Viewer.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

Option D (Explorer): Incorrect. The Explorer license allows users to explore data and create content in the web interface, exceeding the Viewer license's capabilities.

Reference: Tableau Server Documentation - "User Site Roles and Licenses" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 27

.....

You may feel astonished and doubtful about this figure; but we do make our Analytics-Admn-201 exam dumps well received by most customers. Better still, the 98-99% pass rate has helped most of the candidates get the certification successfully, which is far beyond that of others in this field. In recent years, supported by our professional expert team, our Analytics-Admn-201 Test Braindumps have grown up and have made huge progress. We pay emphasis on variety of situations and adopt corresponding methods to deal with. More successful cases of passing the Analytics-Admn-201 exam can be found and can prove our powerful strength.
