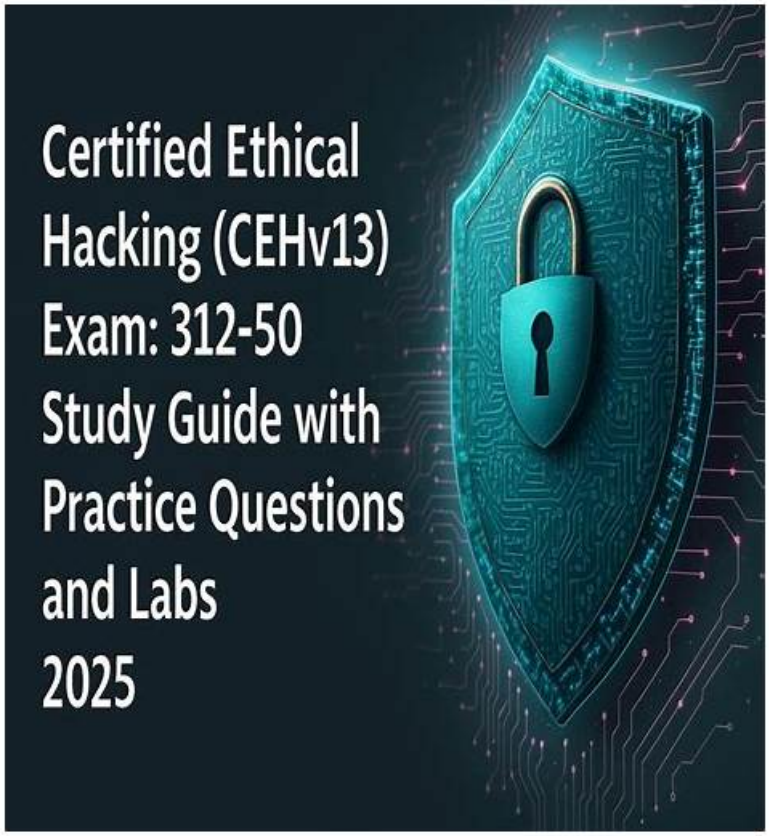
Quiz 312-50v13 - Professional Reliable Certified Ethical Hacker Exam (CEHv13) Test Questions



DOWNLOAD the newest Lead1Pass 312-50v13 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1PmmDWu5cleHcxNrzfDw-UCkeSC-ZHRt2

With this software, you can evaluate your ECCouncil 312-50v13 exam preparation.The beforehand awareness of your weaknesses will help you take the ECCouncil certification exam successfully. Environment you encounter during the practice test is similar to the real ECCouncil 312-50v13 Exam. This feature of software will help you kill ECCouncil 312-50v13 Exam anxiety.

Many people choose to sign up for the ECCouncil 312-50v13 certification examinations in order to advance their knowledge and abilities. We offer updated and actual ECCouncil 312-50v13 Dumps questions that will be enough to get ready for the ECCouncil 312-50v13 test. Our ECCouncil 312-50v13 questions are 100% genuine and will certainly appear in the next ECCouncil 312-50v13 test.

312-50v13 Exam Book, Book 312-50v13 Free

May be you still strange to our 312-50v13 dumps pdf, you can download the free demo of the dump torrent before you buy. If you have any questions to our ECCouncil exam questions torrent, please feel free to contact us and we will give our support immediately. You will be allowed to updating 312-50v13 Learning Materials one-year once you bought pdf dumps from our website.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q278-Q283):

NEW QUESTION # 278
An incident investigator asks to receive a copy of the event logs from all firewalls, proxy servers, and Intrusion Detection Systems (IDS) on the network of an organization that has experienced a possible breach of security. When the investigator attempts to

correlate the information in all of the logs, the sequence of many of the logged events do not match up.
What is the most likely cause?

- A. Proper chain of custody was not observed while collecting the logs.
- B. The network devices are not all synchronized.
- C. The security breach was a false positive.
- D. The attacker altered or erased events from the logs.

Answer: B

Explanation:
Many network and system administrators don't pay enough attention to system clock accuracy and time synchronization. Computer clocks can run faster or slower over time, batteries and power sources die, or daylight-saving time changes are forgotten. Sure, there are many more pressing security issues to deal with, but not ensuring that the time on network devices is synchronized can cause problems. And these problems often only come to light after a security incident.
If you suspect a hacker is accessing your network, for example, you will want to analyze your log files to look for any suspicious activity. If your network's security devices do not have synchronized times, the timestamps' inaccuracy makes it impossible to correlate log files from different sources. Not only will you have difficulty in tracking events, but you will also find it difficult to use such evidence in court; you won't be able to illustrate a smooth progression of events as they occurred throughout your network.

NEW QUESTION # 279
Suppose that you test an application for the SQL injection vulnerability. You know that the backend database is based on Microsoft SQL Server. In the login/password form, you enter the following credentials:
Username: attack' or 1=1 -
Password: 123456
Based on the above credentials, which of the following SQL commands are you expecting to be executed by the server, if there is indeed an SQL injection vulnerability?

- A. select * from Users where UserName = 'attack or 1=1 -- and UserPassword = '123456'
- B. select * from Users where UserName = 'attack' or 1=1 --' and UserPassword = '123456'
- C. select * from Users where UserName = 'attack' or 1=1 -- and UserPassword = '123456'
- D. select * from Users where UserName = 'attack" or 1=1 -- and UserPassword = '123456'

Answer: B

NEW QUESTION # 280
In your cybersecurity class, you are learning about common security risks associated with web servers. One topic that comes up is the risk posed by using default server settings. Why is using default settings ona web - server considered a security risk, and what would be the best initial step to mitigate this risk?

- A. Default settings enable auto-updates; disable and manually patch
- B. Default settings allow unlimited login attempts; setup account lockout
- C. Default settings cause server malfunctions; simplify the settings
- D. Default settings reveal server software type; change these settings

Answer: D

Explanation:
Using default settings on a web server is considered a security risk because it can reveal the server software type and version, which can help attackers identify potential vulnerabilities and launch targeted attacks. For example, if the default settings include a server signature that displays the name and version of the web server software, such as Apache 2.4.46, an attacker can search for known exploits or bugs that affect that specific software and version. Additionally, default settings may also include other insecure configurations, such as weak passwords, unnecessary services, or open ports, that can expose the web server to unauthorized access or compromise.
The best initial step to mitigate this risk is to change the default settings to hide or obscure the server software type and version, as well as to disable or remove any unnecessary or insecure features. For example, to hide the server signature, one can modify the ServerTokens and ServerSignature directives in the Apache configuration file1. Alternatively, one can use a web application firewall or a reverse proxy to mask the server information from the client requests2. Changing the default settings can reduce the attack surface and make it harder for attackers to exploit the web server.

NEW QUESTION # 281
Nathan is testing some of his network devices. Nathan is using Macof to try and flood the ARP cache of these switches.
If these switches' ARP cache is successfully flooded, what will be the result?

- A. If the ARP cache is flooded, the switches will drop into pix mode making it less susceptible to attacks.
- B. The switches will route all traffic to the broadcast address created collisions.
- C. The switches will drop into hub mode if the ARP cache is successfully flooded.
- D. Depending on the switch manufacturer, the device will either delete every entry in its ARP cache or reroute packets to the nearest switch.

Answer: C

Explanation:
When a switch's ARP cache is flooded using a tool like Macof (from the Dsniff suite), it overwhelms the device's MAC address table, which stores port-to-MAC mappings.
If the table overflows:
* The switch can no longer associate MAC addresses with specific ports.
* It fails open and begins forwarding frames out all ports - just like a hub.
This degrades the switch's functionality and allows attackers to sniff traffic on segments that should otherwise be isolated.

Macof (Dsniff Suite)

NEW QUESTION # 282
What does the -oX flag do in an Nmap scan?

- A. Output the results in truncated format to the screen
- B. Perform an eXpress scan
- C. Output the results in XML format to a file
- D. Perform an Xmas scan

Answer: C

Explanation:
https://nmap.org/book/man-output.html
-oX <filespec> - Requests that XML output be directed to the given filename.

NEW QUESTION # 283
.....

Under the help of the 312-50v13 online test engine, you can have a good command of key points which are more likely to be tested in the real test, If there is any update about the ECCouncil 312-50v13 Training Material, our operation system will automatically send the latest one to your email which you used for payment at once.

Quiz Perfect 312-50v13 - Reliable Certified Ethical Hacker Exam (CEHv13) Test Questions

Do you want to be the winner (with our 312-50v13 study guide), So its status can not be ignored, If you don't pass the exam, you just need to send us your failure transcript of 312-50v13 exam test, then Lead1Pass will give you a full refund, thus the money you spent on 312-50v13 test won't be wasted.
