100% Pass Realistic AWS-DevOps Latest Learning Materials - New APP AWS Certified DevOps Engineer - Professional Simulations

The study material provided to the customers is available in three different formats. The first one is PDF (Portable Document Format). It is commonly used for quick preparation. Customers can access the Amazon AWS-DevOps Pdf Dumps anywhere anytime on their smartphones, tablets, and laptops to prepare for Amazon AWS-DevOps certification exam in a short time.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q98-Q103):

NEW QUESTION # 98

After a recent audit, a company decided to implement a new disaster recovery strategy for its Amazon S3 data and its MySQL database running on Amazon EC2. Management wants the ability to recover to a secondary AWS Region with an RPO under 5 seconds and an RTO under 1 minute.

Which actions will meet the requirements while MINIMIZING operational overhead? (Choose two.)

- A. Migrate to Amazon Aurora Global Database.
- **B. Modify the application to write to both Regions at the same time when uploading objects to Amazon S3.**
- C. Migrate the database to an Amazon Aurora multi-master in the primary and secondary Regions.
- D. Migrate the database to Amazon RDS with a read replica in the secondary Region.
- **E. Set up S3 cross-Region replication with a replication SLA for the S3 buckets where objects are being put.**

Answer: B,E

NEW QUESTION # 99

A financial institution provides security-hardened AMIs of Red Hat Enterprise Linux 7.4 and Windows Server 2016 for its application teams to use in deployments. A DevOps Engineer needs to implement an automated daily check of each AMI to monitor for the latest CVE.

How should the Engineer implement these checks using Amazon Inspector?

- A. Tag each AMI with SecurityCheck: True. Configure AWS Step Functions to first compose an Amazon Inspector assessment template for all AMIs that have the tag SecurityCheck: True and second to make a call to the Amazon Inspector API action StartAssessmentRun. Implement a scheduled Amazon CloudWatch Events rule that triggers Step Functions once each day.
- **B. Install the Amazon Inspector agent in each AMI. Configure AWS Step Functions to launch an Amazon EC2 instance for each operating system from the hardened AMI, and tag the instance with SecurityCheck: True. Once EC2 instances have booted up, Step Functions will trigger an Amazon Inspector assessment for all instances with the tag SecurityCheck: True. Implement a scheduled Amazon CloudWatch Events rule that triggers Step Functions once each day.**
- C. Tag each AMI with SecurityCheck: True. Implement a scheduled Amazon Inspector assessment to run once each day for all AMIs with the tag SecurityCheck: True. Amazon Inspector should automatically launch an Amazon EC2 instance for each AMI and perform a security assessment.
- D. Tag each instance with SecurityCheck: True. Implement a scheduled Amazon Inspector assessment to run once each day for all instances with the tag SecurityCheck: True. Amazon Inspector should automatically perform an in-place security assessment for each AMI.

Answer: B

NEW QUESTION # 100

A company is using AWS Organizations to create separate AWS accounts for each of its departments. It needs to automate the following tasks:

Updating the Linux AMIs with new patches periodically and generating a golden image
Installing a new version of Chef agents in the golden image, if available
Enforcing the use of the newly generated golden AMIs in the department's account
Which option requires the LEAST management overhead?

- A. Write a script to launch an Amazon EC2 instance from the previous golden AMI, apply the patch updates, install the new version of the Chef agent, generate a new golden AMI, and then modify the AMI permissions to share only the new image with the departments' accounts.
- B. Use AWS Systems Manager Automation to update the Linux AMI from the previous golden image, provide the URL for the script that will update the Chef agent, and then share only the newly generated AMI with the departments' accounts.
- C. Use an AWS Systems Manager Run Command to update the Chef agent first, use Amazon EC2 Systems Manager Automation to generate an updated AMI, and then assume an IAM role to copy the new golden AMI into the departments' accounts.
- **D. Use AWS Systems Manager Automation to update the Linux AMI using the previous image, provide the URL for the script that will update the Chef agent, and then use AWS Organizations to replace the previous golden AMI into the departments' accounts.**

Answer: D

NEW QUESTION # 101

A company has containerized all of its in-house quality control applications. The company is running Jenkins on Amazon EC2, which requires patching and upgrading. The Compliance Officer has requested a DevOps Engineer begin encrypting build artifacts since

they contain company intellectual property.

What should the DevOps Engineer do to accomplish this in the MOST maintainable manner?

- A. Deploy Jenkins to an Amazon ECS cluster and copy build artifacts to an Amazon S3 bucket with default encryption enabled.
- **B. Leverage AWS CodePipeline with a build action and encrypt the artifacts using AWS Secrets Manager.**
- C. Automate patching and upgrading using AWS Systems Manager on EC2 instances and encrypt Amazon EBS volumes by default.
- D. Use AWS CodeBuild with artifact encryption to replace the Jenkins instance running on Amazon EC2.

Answer: B

NEW QUESTION # 102

What is required to achieve gigabit network throughput on EC2? You already selected cluster-compute, 10GB instances with enhanced networking, and your workload is already network-bound, but you are not seeing 10 gigabit speeds.

- A. Enable bplex networking on your servers, so packets are non-blocking in both directions and there's no switching overhead.
- B. Select PIOPS for your drives and mount several, so you can provision sufficient disk throughput.
- C. Ensure the instances are in different VPCs so you don't saturate the Internet Gateway on any one VPC.
- **D. Use a placement group for your instances so the instances are physically near each other in the same Availability Zone.**

Answer: D

Explanation:

Explanation

A placement group is a logical grouping of instances within a single Availability Zone. Placement groups are recommended for applications that benefit from low network latency, high network throughput, or both. To provide the lowest latency, and the highest packet-per-second network performance for your placement group, choose an instance type that supports enhanced networking. For more information on Placement Groups, please visit the below URL:

* <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/placement-groups.html>

NEW QUESTION # 103

.....

As we all know, it is a must for all of the candidates to pass the exam if they want to get the related AWS-DevOps certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you.
