Valid 156-582 Test Simulator, Latest 156-582 Exam Test

In today's highly competitive CheckPoint market, having the 156-582 certification is essential to propel your career forward. To earn the CheckPoint 156-582 certification, you must successfully pass the 156-582 Exam. However, preparing for the CheckPoint 156-582 exam can be challenging, with potential hurdles like exam anxiety and time constraints.

CheckPoint Check Point Certified Troubleshooting Administrator - R81.20 Sample Questions (Q72-Q77):

NEW QUESTION # 72

You want to print the status of WatchDog-monitored processes. What command best meets your needs?

- A. cpplc print
- B. tcpdump
- C. cpwd_admin list
- D. cppcap

Answer: C

Explanation:

The cpwd_admin list command is used to display the status of processes monitored by the WatchDog service in Check Point. WatchDog ensures that critical processes are running and restarts them if they fail, maintaining the stability and security of the gateway.

NEW QUESTION # 73

What is the correct process for GUI connectivity issues with SmartConsole troubleshooting?

- A. Processes (FWM and CPM), Connectivity, GUI clients, Certificate, Authentication
- B. Connectivity, Processes (FWM and CPM), GUI clients, Certificate, Authentication
- C. Reinstall the SmartConsole and check if it's running properly
- D. First troubleshoot Authentication and then the rest

Answer: B

Explanation:

The correct troubleshooting process for GUI connectivity issues with SmartConsole involves the following steps in order:

- * Connectivity: Ensure that the network connection between SmartConsole and the Management Server is stable.
- * Processes (FWM and CPM): Verify that critical processes like FWM (Firewall Manager) and CPM (Check Point Management) are running correctly.
- * GUI Clients: Check the client-side configurations and ensure that SmartConsole is properly installed and configured.
- * Certificate: Ensure that the necessary certificates for secure communication are valid and correctly installed.
- * Authentication: Confirm that user authentication mechanisms are functioning as expected.

Following this structured approach ensures that all potential issues are systematically addressed.

NEW QUESTION # 74

Application Control and URL Filtering update files are located in which directory?

- A. SFWDIR/conf/update
- **B. SFWDIR/appi/update/**
- C. SCPDIR/apci/update
- D. SCPDIR/appi/update

Answer: B

Explanation:

Update files for Application Control and URL Filtering are typically stored in the SFWDIR/appi/update/ directory. This location houses the latest updates and definitions required for the proper functioning of these security features, ensuring that the gateway can effectively control applications and filter URLs based on the latest threat intelligence.

NEW QUESTION # 75

You need to switch the active log file on the Security Gateway. What is the correct command?

- A. fw switchlog
- **B. fw logswitch**
- C. fw -p -o <log file> switch
- D. Install security policy

Answer: B

Explanation:

The fw logswitch command is used to switch the active log file on a Check Point Security Gateway. This command forces the gateway to start writing logs to a new file, which is useful for log management and troubleshooting purposes. Other options listed are either incorrect or do not perform the log-switching function.

NEW QUESTION # 76

Which of the following would be the most appropriate command in debugging a HideNAT issue?

- **A. fw ctl zdebug + xlate xltrc nat**
- B. fw ctl zdebug + fwn allnat
- C. fw ctl zdebug + fwalloc hidenat
- D. fw ctl zdebug + dynamic natips natports

Answer: A

Explanation:

For debugging Hide NAT issues, the fw ctl zdebug + xlate xltrc nat command is the most appropriate. This command provides detailed tracing of NAT translations, including those related to Hide NAT configurations.

It allows administrators to monitor how internal IP addresses are being translated to external addresses, facilitating effective troubleshooting.

NEW QUESTION # 77

.....
