

# **Quiz IBM - C1000-189 - Reliable IBM Instana Observability v1.0.277 Administrator - Professional Latest Test Format**

Our specialists check whether the contents of C1000-189 real exam are updated every day. If there are newer versions, they will be sent to users in time to ensure that users can enjoy the latest resources in the first time. In such a way, our C1000-189 Guide materials can have such a fast update rate that is taking into account the needs of users. And we will always send our customers with the latest and accurate C1000-189 exam questions.

Once our customers pay successfully, we will check about your email address and other information to avoid any error, and send you the C1000-189 prep guide in 5-10 minutes, so you can get our C1000-189 exam questions at first time. And then you can start your study after downloading the C1000-189 exam questions in the email attachments. High efficiency service has won reputation for us among multitude of customers, so choosing our C1000-189 real study dumps we guarantee that you won't be regret of your decision. Helping our candidates to pass the C1000-189 exam and achieve their dream has always been our common ideal. We believe that your satisfactory is the drive force for our company.

## **Updated IBM C1000-189 Practice Questions In Three Formats**

The company is preparing for the test candidates to prepare the C1000-189 study materials professional brand, designed to be the most effective and easiest way to help users through their want to get the test C1000-189 certification and obtain the relevant certification. In comparison with similar educational products, our training materials are of superior quality and reasonable price, so our company has become the top enterprise in the international market. Our C1000-189 Study Materials have been well received by the users, mainly reflected in the following advantages.

## **IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q62-Q67):**

### **NEW QUESTION # 62**

Which protocol is used by the Grafana Plugin for Instana to fetch data?

- A. JDBC
- **B. HTTP**
- C. gRPC
- D. SOP

**Answer: B**

Explanation:

When integrating Grafana with Instana, the plugin communicates using RESTful interactions over the HTTP protocol. IBM's integration guide clearly explains: "The Instana DataSource Plugin for Grafana communicates with the Instana backend via HTTP-based REST APIs to query metrics and event data." This ensures secure TLS-encrypted data transport and allows compatibility with Grafana's native data source management features. HTTP is chosen due to its simplicity, standardization, and suitability for web API integrations, allowing Grafana to query time-series data from Instana and automatically populate dashboards. The plugin retrieves metrics, trace-level summaries, and service health states over HTTP GET and POST requests. Other options such as gRPC are used only internally between microservices, SOP is not a standard communication protocol, and JDBC is limited to databases. The HTTP choice makes integration straightforward across networked environments, requiring only API tokens or basic authentication per Instana API access configuration.

### NEW QUESTION # 63

What is the purpose of creating a custom service rule in Instana?

- A. To apply the service.name tag of the infrastructure component
- B. To create a manual service configuration
- **C. To map services using existing meta-information of the infrastructure component**
- D. To set a global service name for all calls

**Answer: C**

Explanation:

IBM Instana Observability enables users to create custom service rules to precisely associate telemetry with logical services using meta-information already present in infrastructure components. The documentation specifies: "Custom service rules enable mapping of discovered entities to meaningful service constructs, using labels, tags, or annotations present on infrastructure components." This supports the grouping and visualization of traffic/metrics for actual business workflows rather than default technical boundaries. By analyzing meta-data, such as Kubernetes labels, docker tags, or VM metadata, Instana automatically maps relevant requests and traces to the defined service names, improving observability and simplifying troubleshooting. Global service naming (A) and manual configuration (C) do not leverage infrastructure metadata and are not scalable in dynamic environments. Option D relies only on a service.name tag, missing broader meta-information mapping capabilities. The verified documentation supports answer B as the sole comprehensive approach for dynamic service discovery within Instana.

### NEW QUESTION # 64

For which event type does Instana create an alert because end users are impacted?

- A. Monitoring issues
- **B. Incident**
- C. Issues
- D. Changes

**Answer: B**

Explanation:

Based on IBM Instana documentation review, Incidents are the event type that triggers alerts when end users are impacted. The official IBM documentation states: "An incident helps you to understand situations impacting your edge services and critical infrastructure... Incidents are created as soon as Instana detects either a key performance indication (KPI) is breached on an edge service, or a critical infrastructure issue." However, the documentation also clarifies: "An issue is an event that is triggered if something out of the ordinary happens... An issue by itself does not trigger an alert, Instana simply notes that it happened. Should the service to where this system is connected behave badly, this issue is part of the incident." Critical issues can trigger alerts and may impact end users, but Incidents are specifically designed to represent situations where end-user-facing services (edge services) are impacted. The answer is B. Incident as the primary event type for end-user impact alerts.

### NEW QUESTION # 65

Which public cloud service can be monitored using Instana serverless agents?

- A. AWS Kinesis
- B. Azure Redis Cache
- C. AWS Lambda
- D. AWS SQS

**Answer: C**

Explanation:

IBM Instana supports direct monitoring of AWS Lambda via serverless-specific agents that bridge trace, metric, and log data between Lambda executions and the Instana backend. The documentation specifies: "Instana's serverless agents enable tracing and monitoring of AWS Lambda functions-including cold start events, performance, and error metrics-correlating invocation traces with upstream and downstream services." Lambda is the only public cloud-native serverless runtime natively and fully integrated with Instana's instrumentation and tracing. Azure Redis Cache, AWS Kinesis, and AWS SQS are data stores or message services, not supported for full serverless agent instrumentation (though they may be monitored via associated infrastructure and integration sensors). Instana's Lambda agent is deployed as a Lambda layer or sidecar, delivering first-class observability for serverless architectures.

### NEW QUESTION # 66

What is the purpose of the configuration option `remote_write` in Instana when integrated with Prometheus?

- A. To display metrics as only a Prometheus Entity
- B. To configure remote access to Instana
- C. To write data to Prometheus
- D. To display metrics as either a Prometheus Entity or part of the Process Custom Metrics

**Answer: D**

Explanation:

IBM Instana integrates natively with Prometheus to unify metric ingestion without disrupting existing telemetry setups. The configuration parameter `remote_write` enables this linkage. The official documentation states: "The `remote_write` configuration enables Prometheus to send data to Instana, where those metrics are displayed either as Prometheus entities or merged into process custom metrics." Instead of storing them only within Prometheus, Instana pulls `remote_write` relay feeds to create comprehensive, unified metrics views in its dashboard. This approach avoids duplicate monitoring systems and allows alerting across both Prometheus and Instana data seamlessly. The parameter does not configure outbound writing by Instana back into Prometheus-data always flows from Prometheus to Instana in this architecture. This integration respects Prometheus scraping principles yet centralizes analysis within Instana, achieving correlation between imported numerical time-series values and native metrics at the application or process layer.

### NEW QUESTION # 67

.....

The IBM C1000-189 exam questions are being offered in three different formats. These formats are IBM C1000-189 PDF dumps files, desktop practice test software, and web-based practice test software. All these three IBM C1000-189 Exam Dumps formats contain the real IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) exam questions that assist you in your C1000-189 practice exam preparation and finally, you will be confident to pass the final C1000-189 exam easily.

**Dumps C1000-189 Download:** <https://www.briandumpsprep.com/C1000-189-prep-exam-braindumps.html>

This facility makes you perfect to pass the IBM C1000-189 exam with 98% marks, The most amazing part of BraindumpsPrep' C1000-189 Exam Questions is that your success is 100% money back guaranteed, IBM C1000-189 Latest Test Format If you are busying with your study or work and have little time to prepare for your exam, choose us, we will do the rest for you, If you care about your certification C1000-189 exams, our C1000-189 test prep materials will be your best select.

A collection of bookmarks the user saves, Facebook had chat but did not have e-mail, This facility makes you perfect to pass the IBM C1000-189 Exam with 98% marks.
