ISTQB CTAL_TM_001 Exam | Test CTAL_TM_001 Dumps Demo - Excellent Website for CTAL_TM_001: ISTQB Certified Tester Advanced Level - Test Manager Exam

As you know, today's society is changing very fast. We also need new knowledge to fill in as we learn. And our CTAL_TM_001 learning prep can suit you most in this need for you will get the according certification as well as the latest information. CTAL_TM_001 Exam simulation is selected by many experts and constantly supplements and adjust our questions and answers. When you use our CTAL_TM_001 study materials, you can find the information you need at any time.

ISTQB CTAL_TM_001 Exam Syllabus Topics:

Topic	Details

Topic 1	Managing the Product: This section of the exam measures the skills of a Test Analyst and focuses on the artefacts under test and the metrics that describe them. Examinees show how to define and collect test metrics to monitor quality and progress, estimate effort and resources for different test scopes, and organize defect management workflows that fit sequential, iterative, or hybrid lifecycles. The aim is to ensure test outcomes align with objectives and inform stakeholders through clear reporting, while using estimation techniques and defect data to guide ongoing test and process improvements.
Topic 2	Managing the Test Activities: This section of the exam measures the skills of a Test Manager and covers the end-to-end coordination of testing work. Candidates must demonstrate how to plan testing—defining objectives, scope, resources, schedule, and risk treatments—then how to monitor progress against those plans, control deviations through corrective actions, and conclude testing with completion reports, archival of testware, and lessons-learned sessions. The syllabus also explores tailoring test activities to project context, applying risk-based testing to focus effort where it matters most, shaping a coherent project test strategy, leading process-improvement initiatives, and selecting and managing test tools throughout their lifecycle.
Topic 3	Managing the Team: This section of the exam measures the skills of a Test Lead and addresses the human side of test management. Candidates must demonstrate how to identify the skills required for each project, assess and develop team competence, and apply motivating leadership practices. The syllabus also covers stakeholder relationship management, understanding interests and influence, articulating the business case for testing, and balancing cost-of-quality considerations to ensure testing is properly resourced, communicated, and valued within the wider project.

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q49-Q54):

NEW QUESTION # 49

Your organization is considering using open-source tools. You have been told you need to be aware of the terms of the GNU general public license.

What is the basic concept of this license? [1]

- A. If you're going to distribute the software, you need to do so with the same terms as were applied when you received the software.
- B. A small license fee must be paid to the supplier of the software.
- C. You are allowed to use the software internally, but it cannot be incorporated into any product for which you will receive a profit.
- D. Anyone can use the software anytime for any reason.

Answer: A

Explanation:

The GNU General Public License (GPL) is a free, copyleft license that allows users to change and share all versions of a program. The basic concept of the GPL is that if you distribute the software, you must do so under the same license terms as when you received it. This ensures that the freedoms to use, study, share, and modify the software are preserved¹.

NEW QUESTION # 50

You have been seeing a high number of rejections of defect reports. The developers are complaining that they do not understand what the problem is, even though they have been supplied with screenshots. You have checked a number of the 'problem' defect reports and have not found any information that is missing. The descriptions are very detailed and include all the necessary information in a long descriptive paragraph.

What change should you recommend that should help with the developer's problems?

- A. With the problem reports highlight all the information and then walk through it with the developers so they see it is all there
- **B. Separate out the steps to reproduce the defect in the description so it is clearer for the developers and easier to find**
- C. In addition to attaching the screenshots to the defect report, ask the testers to also email them to the developer
- D. Instruct your team to make all defects high priority so the developers have more urgency behind making the fixes

Answer: B

Explanation:

Context Analysis:

Long descriptive paragraphs are difficult to parse, even if they contain all necessary information. Developers need concise, structured information for quick understanding.

Evaluation of Options:

A . Instruct your team to make all defects high priority:

Incorrect. Changing priority does not address the clarity issue in defect reports.

B . Highlight all the information and walk through it with the developers:

Incorrect. This is time-consuming and not scalable as a general solution.

C . Email screenshots to developers in addition to attaching them to defect reports:

Incorrect. Duplication of information does not solve the clarity problem.

D . Separate out the steps to reproduce the defect in the description so it is clearer for the developers and easier to find:

Correct. Structuring defect reports improves clarity and makes them easier to process.

Syllabus Alignment:

ISTQB recommends clear and concise defect reports to facilitate understanding and resolution (TM-2.3.5).

ISTQB Advanced Level Test Management Syllabus (TM-2.3.5)

NEW QUESTION # 51

You have directed one of your testers to construct a "smoke test" to execute against new builds prior to starting formal testing. This is an example of which software development lifecycle activity?

[1]

- A. Project management
- B. Software development and maintenance
- **C. Change and configuration management**
- D. Technical support

Answer: C

Explanation:

The correct answer is C. Change and configuration management. This is because a smoke test is a type of test that checks the basic functionality and stability of a new build before proceeding to more detailed testing. A smoke test is an example of change and configuration management, which is the activity of controlling and tracking the changes made to the software and its configuration items throughout the software development lifecycle. NEW QUESTION # 52

As part of the improvement program, the organization is also looking at tool support. Which type of tool could be used to ensure higher quality of the code to be reviewed? 1 credit

- **A. Static analysis tool**
- B. Test execution tool
- C. Review tool
- D. Test design tool

Answer: A

NEW QUESTION # 53

You are interviewing a candidate for the position of test analyst. At one stage of the interview, you are looking specifically for skills in the area of professional competence. Which of the following skills would demonstrate this?

- A. Black box test design
- B. Analytical ability
- C. Communication
- D. Ability to delegate

Answer: A

Explanation:

Professional competence in the context of a test analyst refers to the technical knowledge and abilities directly related to testing. Designing tests using black-box techniques is a core part of the test analyst role and is clearly classified under professional (technical) competence. This skill involves understanding the system's external behavior and deriving test conditions based on that - a hallmark of functional testing.

Reference: ISTQB CTFL Syllabus section 4.2 on black-box techniques.
