NEW QUESTION # 73

Which Nutanix Disaster Recovery component or feature provides the best Recovery Time Objective (RTO)?

- A. NearSync
- B. Async
- **C. Metro Availability**
- D. Availability Zone

Answer: C

Explanation:

Nutanix Metro Availability provides the best Recovery Time Objective (RTO) because it enables synchronous replication between two sites. In the event of a failure at one site, VMs can be instantly restarted on the other site with minimal disruption. This setup ensures zero data loss and near-instantaneous recovery.

- * A. Async: Provides high RPO (Recovery Point Objective) but has a longer RTO compared to synchronous replication methods.
- * B. Availability Zone: This term refers to a general site setup, not specific to recovery objectives.
- * C. Metro Availability: Correct, as it uses synchronous replication for near-zero RTO.
- * D. NearSync: Provides better RPO than Async but does not match the RTO of Metro Availability.

- * It must run the same hypervisor as the existing nodes.
- * The SO node does not host VMs but participates in the storage layer to increase capacity and performance.
- * Nutanix currently does not support mixed hypervisors (e.g., combining AHV with ESXi) within the same cluster, even for storage-only nodes.
