

Quiz Network Appliance - NS0-528 - Implementation Engineer - Data Protection Exam Latest Reliable Exam Cram

What's more, part of that FreeDumps NS0-528 dumps now are free: <https://drive.google.com/open?id=1FZy9frVxZlmTug6FshAKxNpNvM8rPG>

The pass rate of the NS0-528 training materials is 99%, we pass guarantee, and if you can't pass, money guarantee for your failure, that is money will return to your account. You just need to send the participation and the failure scanned, money will be returned. We can ensure that your money will be returned, either the certification or the money back. Besides the NS0-528 Training Materials include the question and answers with high-quality, you will get enough practice.

Network Appliance NS0-528 Exam Syllabus Topics:

Topic	Details
Topic 1	NetApp ONTAP Core Data Protection Features: This section of the exam measures the skills of Systems Administrators and validates core knowledge of data protection and redundancy within the ONTAP environment. It encompasses understanding how data efficiencies impact protection strategies and the practical knowledge required to deploy these data protection solutions effectively in a hybrid cloud infrastructure.
Topic 2	Troubleshooting and Testing: This section of the exam measures the skills of Support Engineers and focuses on the practical skills needed to maintain data integrity. It involves troubleshooting common data protection configuration issues, executing well-defined Disaster Recovery (DR) procedures, and performing data restore operations to recover from data loss.
Topic 3	NetApp ONTAP Business Continuity Solutions: This section of the exam measures the skills of Disaster Recovery Specialists and covers advanced business continuity technologies. This includes the configuration and operation of SnapMirror active sync for continuous data replication and the execution of SVM-DR (Storage Virtual Machine Disaster Recovery) operations to ensure high availability.
Topic 4	NetApp Data Protection Software: This section of the exam measures the skills of DevOps Engineers and focuses on the deployment and administration of NetApp's proprietary data protection software. A key part of this domain involves applying these solutions to protect modern containerized applications running in Kubernetes environments.

Topic 5	• Data Protection Solutions: This section of the exam measures the skills of Storage Architects and covers the foundational principles of designing data protection solutions. It focuses on creating comprehensive design documentation, understanding the various components involved, and identifying all critical solution dependencies to ensure a robust and reliable data protection strategy.

NS0-528 Exam Dumps Free - Reliable NS0-528 Exam Blueprint

Do you upset about the difficulty of Network Appliance practice questions? Do you disappointed at losing exam after long-time preparation? We can help you from these troubles with our Latest NS0-528 Learning Materials and test answers. You will find valid NS0-528 real questions and detailed explanations in FreeDumps, which ensure you clear exam easily.

Network Appliance Implementation Engineer - Data Protection Exam Sample Questions (Q131-Q136):

NEW QUESTION # 131

What is a SVM in NetApp ONTAP?

- A. A compressed volume that takes up less storage space
- B. A volume that is optimized for data access speed
- **C. A storage virtual machine that provides access to storage resources**
- D. A volume that is encrypted to protect data

Answer: C

NEW QUESTION # 132

An administrator wants to use SnapCenter 4.2 to back up and restore both their VMware Horizon environment and Microsoft SQL attached database.

In this scenario, which service account role should be configured to accomplish this task?

- A. operator
- B. administrator
- C. backup
- **D. sysadmin**

Answer: D

NEW QUESTION # 133

An administrator has SnapMirror active sync configured to protect Oracle databases between data centers. The configuration has multiple databases stored on each LUN. A database administrator (DBA) asks the administrator to restore a single database on the source cluster.

Which two parameters must be provided by the DBA? (Choose two.)

- **A. ending byte offset**
- B. byte-range lock
- **C. starting byte offset**
- D. byte count

Answer: A,C

Explanation:

When multiple databases are stored on the same LUN and a single database needs to be restored using SnapMirror active sync, the restore process must target the specific byte range corresponding to that database. This requires the starting byte offset and the ending byte offset.

These define the exact data region on the LUN to be restored without affecting the other databases.

NEW QUESTION # 134

You need to protect an entire SVM and all of its data volumes and have decided to use SnapMirror SVM. The DR cluster uses a different subnet from the production cluster, and the destination SVM has the added requirement of also being online and serving data as read-only.

What option would you set to achieve both goals?

- A. Use the **-identity-preserve** option set to **false** in the **snapmirror create** command.
- B. Set the **-discard-configs** option to **network** in the applied **snapmirror** policy.
- C. Use the **-identity-preserve** option set to **true** in the **snapmirror create** command.
- D. Set the **-type** option to **automated-failover** in the applied **snapmirror** policy.

Answer: A

Explanation:

Setting **-identity-preserve false** allows the destination SVM to have a different network configuration, which is required since the DR site uses a different subnet. It also enables the destination SVM to be online and serve data in read-only mode, which meets the requirement for data availability during normal operation without promoting the SVM.

NEW QUESTION # 135

A VMware Administrator needs to restore a VM after a recent server patch update has corrupted the VM operating system.

What is the quickest way to restore the VM?

- A. From vCenter vSphere client, use SnapCenter Plug-In for VMware vSphere to restore the VM
- B. From ONTAP System Manager, rollback the datastore volume containing multiple VMs to a previous Snapshot
- C. **From ONTAP System Manager, create a FlexClone of a Snapshot before the patch update, and mount to vSphere**
- D. From the SnapCenter Server, use SnapCenter Plug-In for VMware vSphere to restore the VM

Answer: C

Explanation:

Creating a FlexClone from a pre-patch Snapshot is the quickest, space-efficient method to restore a single VM without affecting others in the datastore. It enables immediate access to the VM's previous state without a full restore or rollback of the entire volume.

NEW QUESTION # 136

.....

Attending FreeDumps, you will have best exam dumps for the certification of NS0-528 exam tests. We offer you the most accurate NS0-528 exam answers that will be your key to pass the certification exam in your first try. There are the best preparation materials for your NS0-528 Practice Test in our website to guarantee your success in a short time. Please totally trust the accuracy of questions and answers.
