

# Quiz Salesforce Pass-Sure Analytics-Admn-201 - Exam Salesforce Certified Tableau Server Administrator Introduction

Knowledge is defined as intangible asset that can offer valuable reward in future, so never give up on it and our Analytics-Admn-201 exam preparation can offer enough knowledge to cope with the exam effectively. To satisfy the needs of exam candidates, our experts wrote our Analytics-Admn-201 practice materials with perfect arrangement and scientific compilation of messages, so you do not need to study other numerous materials to find the perfect one anymore. Our Analytics-Admn-201 Exam Quiz will offer you the best help. And our Analytics-Admn-201 training material will never let you down.

Our product boosts many merits and high passing rate. Our products have 3 versions and we provide free update of the Salesforce exam torrent to you. If you are the old client you can enjoy the discounts. Most important of all, as long as we have compiled a new version of the Analytics-Admn-201 Exam Questions, we will send the latest version of our Salesforce exam questions to our customers for free during the whole year after purchasing. Our product can improve your stocks of knowledge and your abilities in some area and help you gain the success in your career.

>> Exam Analytics-Admn-201 Introduction <<

## Pass Guaranteed 2025 Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Unparalleled Exam Introduction

Similarly, TestKingIT provides you 1 year free updates after your purchase of Salesforce Analytics-Admn-201 practice tests. These updates will help you prepare well if the content of the exam changes. The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) demo of the practice exams is totally free and it helps you in examining the Analytics-Admn-201 study materials.

### Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Migration &amp; Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>

## Salesforce Certified Tableau Server Administrator Sample Questions (Q32-Q37):

### NEW QUESTION # 32

When you use trusted tickets in Tableau Server, users can:

- A. Access embedded views without being prompted for credentials
- B. Encrypt database connections
- C. Save and edit workbooks
- D. Embed database credentials

**Answer: A**

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

\* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.

\* Tableau Server issues a temporary ticket (a unique string).

\* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).

\* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.

\* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.

\* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions-those depend on the user's site role and permissions.

\* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases-database credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" ([https://help.tableau.com/current/server/en-us/trusted\\_auth.htm](https://help.tableau.com/current/server/en-us/trusted_auth.htm)).

### NEW QUESTION # 33

Which three data sources support Kerberos delegation with Tableau Server? (Choose three.)

- A. SAP HANA
- B. SQL Server
- C. PostgreSQL
- D. Teradata

**Answer: A,B,D**

Explanation:

Kerberos delegation allows Tableau Server to pass a user's Kerberos credentials to a data source for seamless authentication (SSO)-let's explore which sources support it:

\* Kerberos Overview:

\* Used with Active Directory (AD) for SSO in Windows environments.

\* Tableau Server delegates the user's ticket to the data source, avoiding embedded credentials.

\* Requires:

\* Data source support for Kerberos.

\* Proper configuration (e.g., SPN, constrained delegation).

\* Supported Data Sources: Per Tableau's documentation:

\* Option A (Teradata): Correct.

\* Details: Supports Kerberos delegation-common in enterprise data warehouses.

\* Config: Enable in TSM (tsm authentication kerberos configure) and set SPN for Teradata.

\* Option C (SQL Server): Correct.

\* Details: Fully supports Kerberos-widely used with AD-integrated SQL Server instances.

\* Config: Requires AD setup and "Trustworthy" delegation in SQL Server.

\* Option D (SAP HANA): Correct.

\* Details: Supports Kerberos SSO via delegation-popular in SAP ecosystems.

\* Config: Needs HANA Kerberos setup (e.g., keytab) and Tableau Server integration.

\* Option B (PostgreSQL): Incorrect.

\* Why: Supports Kerberos authentication natively, but Tableau Server doesn't enable delegation to PostgreSQL-users must embed credentials or use other methods (e.g., OAuth).

Why This Matters: Kerberos delegation enhances security by avoiding stored passwords-knowing supported sources ensures SSO feasibility.

Reference: Tableau Server Documentation - "Kerberos Delegation" ([https://help.tableau.com/current/server/en-us/kerberos\\_delegation.htm](https://help.tableau.com/current/server/en-us/kerberos_delegation.htm)), "Supported Connectors" (<https://help.tableau.com/current/server/en-us/datasource.htm>).

### NEW QUESTION # 34

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Limitation on storage space
- B. Limitation on number of users
- C. Ability to embed credentials
- D. Language and locale

**Answer: A,D**

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

\* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

\* Option B (Limitation on storage space): Correct.

\* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

\* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.

\* Impact: Prevents one site from monopolizing resources in multi-site deployments.

\* Option D (Language and locale): Correct.

\* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).

\* How: Site settings UI-e.g., "Language: French, Locale: France."

- \* Impact: Tailors the user experience per site's audience.
- \* Option A (Ability to embed credentials): Incorrect.
- \* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.
- \* Option C (Limitation on number of users): Incorrect.
- \* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.

Reference: Tableau Server Documentation - "Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

### NEW QUESTION # 35

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Run the tsm register command
- B. Edit tabsvc.yml
- C. Reinstall Tableau Server
- **D. Run the tsm reset command**

**Answer: D**

Explanation:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the tsm reset command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset -- username <new-username> --password <new-password>.

Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.

Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.

Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.

Reference: Tableau Server Documentation - "TSM Reset Command" ([https://help.tableau.com/current/server/en-us/cli\\_reset.htm](https://help.tableau.com/current/server/en-us/cli_reset.htm)).

### NEW QUESTION # 36

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Click the Performance link in the toolbar at the top of the view
- B. Type :record\_performance=yes& at the end of the view URL, immediately before the session ID
- **C. Type :record\_performance=yes& at the end of the view URL, immediately after the session ID**
- D. Delete the session ID in the URL and reload the view

**Answer: C**

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append :record\_performance=yes& to the view URL, immediately after the session ID. For example:

\* Original

URL: <http://server/##/site/my-site/views/workbook/view?.iid=1>

\* Modified

URL: [http://server/##/site/my-site/views/workbook/view?.iid=1:record\\_performance=yes&](http://server/##/site/my-site/views/workbook/view?.iid=1:record_performance=yes&)

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

\* Option B (Type :record\_performance=yes& at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

\* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

\* Option C (Type :record\_performance=yes& immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., :iid=1) to function correctly.

\* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" ([https://help.tableau.com/current/server/en-us/perf\\_record.htm](https://help.tableau.com/current/server/en-us/perf_record.htm)).

## NEW QUESTION # 37

.....

Our Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps comes in three formats: Salesforce Analytics-Admn-201 PDF dumps file, desktop-based practice test software, and a web-based practice exam. These versions are specially designed to make Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) preparation for users easier. Analytics-Admn-201 Questions in these formats of TestKingIT's material are enough grasp every test topic in the shortest time possible.
