resources to pass this challenging C_CPI_2506 exam. You should also keep in mind that to get success in the SAP C_CPI_2506 exam is not an easy task.

SAP Certified Associate - Integration Developer Sample Questions (Q44-Q49):

NEW QUESTION # 44
On which standards is OData based?

- A. TCP, AtomPub, and JSON
- B. SOAP, AtomPub, and JSON
- C. HTTP, AtomPub, and JSON

Answer: C

Explanation:
OData (Open Data Protocol) is a REST-based protocol standardized by OASIS and adopted widely in SAP systems.
It builds on HTTP as the communication protocol.
It uses AtomPub (Atom Publishing Protocol) and JSON as payload representation formats.
SOAP is not used for OData; instead, OData relies on REST principles.
TCP is the underlying transport layer, but OData is explicitly defined over HTTP.
Thus, the correct basis for OData is HTTP, AtomPub, and JSON.

NEW QUESTION # 45
What is the most crucial factor for ensuring robust security in the integration of this SAP landscape, while maintaining optimal performance and scalability?

- A. Centralizing all SAP system administration to a single, highly secure data center.
- B. Employing a highly skilled security team with extensive SAP experience.
- C. Implementing a well-defined security architecture that encompasses authentication, authorization, and data encryption.
- D. Prioritizing the latest SAP security patches above all other considerations.

Answer: C

Explanation:
For robust security in SAP integration landscapes:
A security architecture must cover:
Authentication # Verifying the identity of users/systems (OAuth 2.0, SAML, certificates).
Authorization # Role-based access control.
Encryption # TLS/SSL for data in transit, strong encryption for data at rest.
This ensures end-to-end security without sacrificing performance or scalability.
Other options:
Skilled teams and security patches are important but are operational measures, not the foundation of integration security.
Centralizing system administration is organizational, not architectural.
Thus, the key is a well-defined security architecture.

NEW QUESTION # 46
Where can you find more information about APIs, policies, and integrations?

- A. SAP Business Accelerator Hub
- B. Open Connectors capability within SAP Integration Suite
- C. Cloud Integration capability within SAP Integration Suite

Answer: A

Explanation:
You can find more information about APIs, policies, and integrations in the SAP Business Accelerator Hub. The SAP Business Accelerator Hub is a central place where you can discover, explore, and consume pre-built integrations, APIs, and best practices for various business scenarios and industries. Reference: Integration Software | SAP Integration Suite, Modernize Integration with

NEW QUESTION # 47
Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Point-to-point and multicast messaging
- B. Publish/subscribe and point-to-point messaging
- C. Publish/subscribe and request/reply messaging
- D. Request/reply messaging and multicast messaging

Answer: B

Explanation:
SAP Event Mesh supports two key asynchronous messaging patterns:
Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.
Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.
Other options are incorrect:
Request/Reply # Synchronous pattern, not the focus of Event Mesh.
Multicast messaging # Not explicitly supported; handled through Pub-Sub.
Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

NEW QUESTION # 48
Which expression language can you use to access the content of a message in an integration flow?

- A. Spring expression language
- B. Simple expression language
- C. XML expression language
- D. JavaScript expression language

Answer: B

Explanation:
To access the content of a message in an integration flow, you can use the Simple expression language. The Simple expression language is a subset of the expressions defined in Camel Simple Expression Language, which is a language for accessing and manipulating message contents and exchange properties in Apache Camel integration framework. The Simple expression language supports various built-in variables, functions, operators, and literals that can be used to construct expressions for different purposes, such as routing conditions, content modification, variable assignment, and so on. You can use the Simple expression language when configuring components that support expressions, such as content modifier, router, filter, write variables, and so on.
