Realistic Valid SPLK-1004 Exam Dumps | Amazing Pass Rate For SPLK-1004 Exam | Effective SPLK-1004: Splunk Core Certified Advanced Power User

The best way of passing Splunk actual test is choosing accurate exam braindumps. Actual4Labs has latest test questions and accurate exam answers to ensure you clear SPLK-1004 Real Exam. You just need spend your spare time to practice Splunk top questions and review the key points of study guide, it will be easy to clear exam.

Splunk Core Certified Advanced Power User Sample Questions (Q85-Q90):

NEW QUESTION # 85
Which of the following is true about Log Event alerts?

- A. They must be used with other alert actions.
- B. They cannot use tokens to reference event fields.
- C. They require at least Power User role.
- D. They create new searchable events.

Answer: D

Explanation:
Log Event alerts in Splunk are designed to create new events in the index when specific conditions are met.
These events are then searchable like any other event, allowing for further analysis and correlation.
This functionality is particularly useful for tracking occurrences of specific conditions over time or triggering additional workflows based on the logged events.
Reference:Splunk Documentation on Alert Actions

NEW QUESTION # 86
When would a distributable streaming command be executed on an indexer?

- A. If some of the preceding search commands are executed on the indexer, and a timerchart command is used.
- B. If any of the preceding search commands are executed on the search head.
- C. If all preceding search commands are executed on the indexer.
- D. If all preceding search commands are executed on the indexer, and a streamstats command is used.

Answer: C

NEW QUESTION # 87
Which function of the stats command creates a multivalue entry?

- A. makemv
- B. mvcombine
- C. eval
- D. list

Answer: D

Explanation:
The list function of the stats command creates a multivalue entry, combining multiple occurrences of a field into a single multivalue field.

NEW QUESTION # 88
Which of the following is true about a KV Store Collection when using it as a lookup?

- A. Each collection must have at least 2 fields, none of which need to match values of a field in your event data.
- B. Each collection must have at least 3 fields, one of which needs to match values of a field in your event data.
- C. Each collection must have at least 2 fields, one of which needs to match values of a field in your event data.
- D. Each collection must have at least 3 fields, none of which need to match values of a field in your event data.

Answer: C

Explanation:
Comprehensive and Detailed Step by Step Explanation:
When using a KV Store Collection as a lookup in Splunk,each collection must have at least 2 fields, andone of these fields must match values of a field in your event data. This matching field serves as the key for joining the lookup data with your search results.
Here's why this works:
* Minimum Fields Requirement: A KV Store Collection must have at least two fields: one to act as the key (matching a field in your event data) and another to provide additional information or context.
* Key Matching: The matching field ensures that the lookup can correlate data from the KV Store with your search results. Without this, the lookup would not function correctly.
Other options explained:
* Option A: Incorrect because a KV Store Collection does not require at least 3 fields; 2 fields are sufficient.
* Option C: Incorrect because at least one field in the collection must match a field in your event data for the lookup to work.
* Option D: Incorrect because a KV Store Collection does not require at least 3 fields, and at least one field must match event data.
Example: If your event data contains a fielduser_id, and your KV Store Collection has fieldsuser_idand user_name, you can use thelookupcommand to enrich your events withuser_namebased on the matching user_id.

NEW QUESTION # 89
Which of the following Is valid syntax for the split function?

- A. ...| eval areaCodes = split (phonNumber, "_"
- B. ...| eval split phoneNUmber by "_" as areaCodes.
- C. ...| eval phoneNumber split("-", 3, areaCodes)
- D. ...| eval split (phone-Number, "_", areaCodes)

Answer: A

Explanation:
The valid syntax for using the split function in Splunk is ... | eval areaCodes = split(phoneNumber, "_") (Option B). The split function divides a string into an array of substrings based on a specified delimiter, in this case, an underscore. The resulting array is stored in the new field areaCodes.

NEW QUESTION # 90
