Authoritative Simulation Ethics-In-Technology Questions & Passing Ethics-

In-Technology Exam is No More a Challenging Task

The WGU Ethics In Technology QCO1 certification exam is one of the top-rated career advancement certification exams. The WGU Ethics-In-Technology certification exam can play a significant role in career success. With the WGU Ethics In Technology QCO1 (Ethics-In-Technology) certification, you can gain several benefits such as validation of skills, career advancement, competitive advantage, continuing education, and global recognition of your skills and knowledge.

WGU Ethics In Technology QCO1 Sample Questions (Q43-Q48):

NEW QUESTION # 43

A data scientist selects publicly available demographic data from a limited group of familiar zip codes when training an algorithm. What are two ethical concerns with this approach? Choose 2 answers.

- A. Predictive coding
- B. Privacy violation
- C. Proxy discrimination
- D. Small sample size

Answer: C,D

Explanation:

The data scientist's approach raises two key ethical concerns:

- * Proxy Discrimination (C) - Using demographic data from limited zip codes may create biased AI models that discriminate against certain racial, economic, or social groups. Zip codes often reflect historical segregation, leading to unfair predictions.
 - * Small Sample Size (D) - Training an AI model on a limited set of familiar zip codes introduces selection bias, reducing the model's ability to generalize across diverse populations. This affects fairness and accuracy.
 - * Algorithmic Fairness & Bias (FAT/ML Guidelines) - AI models must avoid using biased proxies and ensure diverse training data.
 - * Privacy & Ethical AI (GDPR, CCPA) - AI decisions must not indirectly discriminate based on location, race, or socioeconomic status.
 - * Utilitarian Ethics (Maximizing Fairness & Inclusivity) - AI should benefit all groups equally, not just selected demographics.
 - * IEEE & ACM AI Ethics Standards - Encourage transparent, unbiased data selection to prevent discrimination.
- Relevant Ethical References in Technology: Thus, the correct answers are C. Proxy discrimination and D. Small sample size, as both contribute to bias in AI models.

NEW QUESTION # 44

An underage actor is admitted to a local hospital. A nurse from another department wants to know what the patient's ailment is. The nurse accesses the patient's medical record and is subsequently flagged for unauthorized access. Which law has the nurse violated?

- A. Health Insurance Portability and Accountability Act (HIPAA)
- B. Children's Online Privacy Protection Act (COPPA)
- C. Electronic Communications Privacy Act (ECPA)
- D. Gramm-Leach-Bliley Act (GLBA)

Answer: A

NEW QUESTION # 45

What is a Gramm-Leach-Bliley Act (GLBA) financial privacy rule that presents a threat to data privacy?

- A. Opt-in
- B. Pretexting
- C. Opt-out
- D. Safeguard

Answer: C

NEW QUESTION # 46

An auto manufacturer is developing a new line of autonomous vehicles. Multiple accidents, including fatalities, involving competitors' autonomous vehicles have already occurred. Management is concerned about potential liability, reputational damage, and financial loss. In response, the system safety engineer conducts a review at each stage of the software development process to record, assess, and account for detected issues.

Which type of log is the system safety engineer using?

- A. Change
- B. Risk
- C. Defect
- **D. Hazard**

Answer: D

Explanation:

A hazard log is a structured record of potential dangers, risks, and safety concerns identified throughout the development of a system-particularly in high-risk industries like autonomous vehicles. The system safety engineer is tracking issues that could lead to accidents, fatalities, or legal consequences, which aligns with hazard logging.

Unlike risk logs (which document broader business risks) or defect logs (which track software bugs), a hazard log focuses specifically on safety risks.

* ISO 26262 (Automotive Safety Standard) - Requires systematic hazard logging in autonomous vehicle development.

* Utilitarian Ethics & Public Safety - Tracking hazards minimizes harm to the public and ensures ethical AI deployment.

* Product Liability & Ethics (Tort Law) - Ethical and legal responsibility requires addressing known safety concerns.

* ACM & IEEE Safety Standards - Developers must document hazards and mitigate risks in AI- driven systems.

Relevant Ethical References in Technology: Thus, the correct answer is C. Hazard, as the engineer is recording and assessing safety risks in autonomous vehicles.

NEW QUESTION # 47

An organization decides to provide its employees with additional parental leave benefits that exceed legal requirements. Which concept is the organization acting on to support employees?

- **A. Corporate social responsibility**
- B. Supply chain sustainability
- C. Integrity
- D. Ethics code

Answer: A

NEW QUESTION # 48

.....

Maybe you can find the data on the website that our Ethics-In-Technology training materials have a very high hit rate, and as it should be, our pass rate of the Ethics-In-Technology exam questions is also very high. Maybe you will not consciously think that it is not necessary to look at the data for a long time to achieve such a high pass rate? While Ethics-In-Technology practice quiz give you a 99% pass rate, you really only need to spend very little time.
