- B. ipv6 multicast
- C. ipv6 unicast-routing
- D. ipv6 nd proxy

Answer: C

NEW QUESTION # 50
What is the maximum number of software images that can be stored simultaneously on an ICX switch?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
RUCKUS ICX switches are designed to store multiple software images simultaneously, allowing network administrators to manage firmware versions effectively. The maximum number of software images that can be stored on an ICX switch is three.
Image Storage Structure:
* Primary Image:
* The main firmware image that the switch loads during the boot process.
* Secondary Image:
* An alternative firmware image that can be used for redundancy or testing purposes.
* Tertiary (or Additional) Image:
* A third firmware image slot available for further flexibility in image management.
Managing Software Images:
* Viewing Stored Images:
* To display the software images stored on the switch, use the following command:
sql
Copy code
show flash
* This command lists all firmware images present in the switch's flash memory.
* Setting Boot Preferences:
* To specify which image the switch should load on the next reboot, use:
sql
Copy code
boot system flash primary
* Replace primary with secondary or tertiary as needed.
* Upgrading Firmware:
* When upgrading the switch firmware, you can upload the new image to any of the available slots (primary, secondary, or tertiary) without overwriting existing images, providing a fallback option if needed.
Best Practices:
* Maintain Multiple Images:
* Keeping multiple firmware images allows for quick recovery in case of issues with the current running image.
* Regular Updates:

* Ensure that the stored images are up-to-date to maintain security and feature enhancements.
* Consistent Configuration:
* After uploading a new image, verify that the switch configuration is compatible with the firmware version to prevent potential issues.

NEW QUESTION # 53
Which configuration steps will add untagged ethernet ports 1/1/1 and 1/1/2 and tagged ethernet port 1/2/1 to VLAN 10?

- A. untagged ethernet 1/1/1 to 1/1/2 vlan 10
  tagged ethernet 1/2/1 vlan 10
- B. vlan 10
  no tagged ethernet 1/1/1 to 1/1/2
  tagged ethernet 1/2/1
- C. vlan 10
  untagged ethernet 1/1/1 to 1/1/2
  tagged ethernet 1/2/1
- D. untagged ethernet 1/1/1 to 1/1/2
  tagged ethernet 1/2/1
  vlan 10

Answer: C

Explanation:
To configure RUCKUS ICX switch ports 1/1/1 and 1/1/2 as untagged members of VLAN 10, and port 1/2/1 as a tagged member of VLAN 10, follow these steps:
* Access the Switch's Command Line Interface (CLI):
* Use SSH or a direct console connection to access the switch's CLI.
* Enter Global Configuration Mode:
* At the prompt, enter:
bash
Copy code
enable
configure terminal

* Create or Select VLAN 10:
* Ensure VLAN 10 exists. If not, create it:
Copy code
vlan 10
* Assign Ports 1/1/1 and 1/1/2 as Untagged in VLAN 10:
* Within VLAN 10 configuration, assign the ports:
css
Copy code
untagged ethernet 1/1/1 to 1/1/2
* Assign Port 1/2/1 as Tagged in VLAN 10:
* Still within VLAN 10 configuration, assign the port:
Copy code
tagged ethernet 1/2/1
* Exit Configuration Mode and Save Changes:
* Exit to the previous mode:
bash
Copy code
exit
* Save the configuration to ensure changes persist after a reboot:
arduino
Copy code
write memory
* VLAN Configuration:
* The command vlan 10 selects VLAN 10 for configuration. If VLAN 10 does not exist, this command creates it.
* Untagged Ports:
* The command untagged ethernet 1/1/1 to 1/1/2 assigns ports 1/1/1 and 1/1/2 as untagged members of VLAN 10. Untagged ports are typically used for end devices that do not tag their own traffic.
* Tagged Ports:
* The command tagged ethernet 1/2/1 assigns port 1/2/1 as a tagged member of VLAN 10. Tagged ports are commonly used for trunk links between switches or other network devices that handle multiple VLANs.
* Command Syntax:
* The sequence of commands in option D correctly follows the RUCKUS ICX switch configuration syntax, ensuring that the ports are appropriately assigned to VLAN 10.
