NEW QUESTION 1
An engineer configures a WLAN with fast transition enabled Some legacy clients fail to connect to this WLAN. Which feature allows the legacy clients to connect while still allowing other clients to use fast transition based on then OLTIs?

A. over the DS
B. adaptive R
C. 802.11V
D. 802.11k

Answer: B

NEW QUESTION 2
Which description of an SD-Access wireless network infrastructure deployment is true?

A. The access point is part of the fabric underlay.
B. The WLC is part of the fabric underlay.
C. The access point is part the fabric overlay.
D. The wireless client is part of the fabric overlay.

Answer: C

NEW QUESTION 3
Which PAgP mode combination prevents an Etherchannel from forming?

A. auto/auto
B. desirable/desirable
C. auto/desirable
D. desirable

Answer: A

NEW QUESTION 4
Which statement about VXLAN is true?

Test4Engine offers updated and real RUCKUS RCWA Exam Dumps for RUCKUS Certified Wi-Fi Associate Exam (RCWA) test takers who want to prepare quickly for the RCWA examination. These actual RCWA exam questions have been compiled by a team of professionals after a thorough analysis of past papers and current content of the RCWA test. If students prepare with these valid RCWA questions, they will surely become capable of clearing the RCWA examination within a few days.

Perhaps now you are one of the candidates of the RCWA exam, perhaps now you are worried about not passing the exam smoothly. Now we have good news for you: our RCWA study materials will solve all your worries and help you successfully pass it. With the high pass rate as 98% to 100%, you will find that we have the best RCWA learning braindumps which contain the most accurate real exam questions.

RCWA Latest Braindumps | Pass-Sure RCWA: RUCKUS Certified Wi-Fi Associate Exam

IT certification exam cost is really large cost for most candidates in the whole world. Passing exam at first attempt will be everyone's goal. Now our RUCKUS RCWA valid exam cram review can help you achieve your goal. Recent years we are engaging in providing 100% pass-rate RCWA Valid Exam Cram review for buyers from all over the world, and help thousands of candidates go through exam every year. If you have doubt in your test, let us help you pass exam for sure.

RUCKUS Certified Wi-Fi Associate Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

A network administrator has saved a backup file using the default file name "RUCKUS- Unleashed_db_082719_ll_07.bak". Which three actions can be taken with this backup file? (Choose three.)

- A. Restore all configuration.
- B. Restore all configuration except system name and IP address.
- C. Restore SmartZone controller system settings.
- D. Display the startup-config as cleartext.
- E. Restore only WLAN settings.
- F. Restore configuration of an ICX switch managed by Unleashed.

Answer: A,B,E

Explanation:
AnUnleashed backup file(e.g., RUCKUS-Unleashed_db_082719_ll_07.bak) contains a comprehensive snapshot of theUnleashed network configuration, including SSIDs, WLAN policies, AP settings, and network parameters. According to theRUCKUS One Online Help - Backup and Restoresection, administrators can use this file to:
* Restore all configuration settings(A), re-establishing the network's operational state.
* Restore only WLAN settings(B), providing flexibility when preserving SSID configurations while leaving system details unchanged.
* Restore all configuration except the system name and IP address(E), allowing recovery to a new system without IP conflicts.
The backup file cannot display the configuration ascleartext, as it is encrypted for security. It also cannot restoreSmartZonecontroller configurations orICX switch settingsdirectly-those require separate management mechanisms.
Thus, the valid operations areA,B, andE.

NEW QUESTION # 22
Which factor primarily determines the maximum theoretical throughput of a Wi-Fi link?

- A. Signal-to-noise ratio (SNR)
- B. Beacon interval timing
- C. Channel width and MCS rate
- D. Transmit power level

Answer: C

Explanation:
The maximum theoretical throughput of a Wi-Fi link is primarily defined by the channel width (e.g., 20, 40, 80, or 160 MHz) and the Modulation and Coding Scheme (MCS) rate selected by the device.
As stated in the RUCKUS One Online Help - PHY and Data Rate Concepts, throughput increases with wider channels and higher modulation (e.g., 1024-QAM in Wi-Fi 6). However, achieving these rates depends on sufficient SNR, which influences the MCS level that can be sustained.
RUCKUS Analytics collects PHY rate metrics to validate link efficiency and helps determine whether MCS downgrades are caused by environmental noise or interference.
Transmit power and beacon timing affect stability, not raw throughput.

NEW QUESTION # 23
When planning a Wi-Fi network in RUCKUS Wi-Fi Planner, what is the primary purpose of defining attenuation values for wall materials?

- A. To adjust AP channel width automatically
- B. To calculate client RSSI thresholds
- C. To determine DHCP lease distribution zones
- D. To simulate RF signal loss for coverage prediction

Answer: D

Explanation:
InRUCKUS Wi-Fi Planner, definingattenuation valuesfor wall materials enables the simulation ofRF signal lossacross physical barriers such as drywall, concrete, or glass.
According toRUCKUS One Online Help - Wi-Fi Planner RF Modeling, accurate wall attenuation data allows the planner to predict signal propagation and coverage maps with greater accuracy. This ensures optimal AP placement and reduces coverage overlap or dead zones.
TheRUCKUS Analytics 3.5 User Guide - RF Validation Reportsconfirms that modeling real-world materials provides reliable pre-deployment visibility of expected SNR and throughput performance.
Other options-like RSSI thresholds or DHCP zoning-are not part of RF prediction modeling.

NEW QUESTION # 24
Which three external proxy and non-proxy authentication services are available in SmartZone?
(Choose three.)

- A. OAuth
- B. LDAP
- C. SAML
- D. RADIUS
- E. TACACS+
- F. AD

Answer: B,D,F

Explanation:
SmartZone controllerssupport a range ofexternal authentication servicesfor bothproxy (via controller)and non-proxy (direct-to-AAA)authentication mechanisms. According to theRUCKUS One Online Help - Authentication Services Configuration, the supported external services include:
* Active Directory (AD) (A):Used for domain-based user authentication and group policy enforcement.
* Lightweight Directory Access Protocol (LDAP) (B):Provides user authentication through directory lookup, commonly used for enterprise identity systems.
* RADIUS (E):A widely used AAA protocol that integrates with external servers such as FreeRADIUS, Cisco ISE, or Microsoft NPS for centralized authentication and accounting.
WhileSAMLandOAuthare used inRUCKUS Cloud and RUCKUS Onefor SSO (Single Sign-On) and API authentication, they arenot used for WLAN or AAA authenticationwithin SmartZone.TACACS+is not supported as an external client authentication method in SmartZone (it is only used for admin login on some platforms).
Therefore, the correct authentication services areA (AD),B (LDAP), andE (RADIUS).

NEW QUESTION # 25
Which statement accurately describes the relationship between SNR and data rate in Wi-Fi networks?

- A. Lower SNR allows higher modulation rates.
- B. Higher SNR supports higher modulation rates.
- C. SNR only affects transmit power, not throughput.
- D. SNR has no effect when using OFDMA.

Answer: B

Explanation:
Signal-to-Noise Ratio (SNR)directly influences themodulation and coding scheme (MCS)that can be used between a Wi-Fi client

and AP. A higher SNR allows the AP to select higher-order modulations (e.g., 256- QAM or 1024-QAM), which increases throughput efficiency.
According toRUCKUS One Online Help - RF Signal and SNR Concepts, an SNR of around 25 dB or greater is typically required for high-rate modulation such as MCS 9 or above.
RUCKUS Analytics 3.5 User Guide - PHY Metricsconfirms that RUCKUS APs continuously adapt MCS levels based on SNR, optimizing link performance dynamically.
Lower SNR conditions force modulation downshifts (e.g., QPSK or BPSK), reducing data rates for reliability.
