## 2025 Updated 1z0-1073-24 – 100% Free Real Torrent | Oracle Inventory Cloud 2024 Implementation Professional Exam Overviews

With the development of society, Oracle industry has been tremendously popular. And more and more people join Oracle 1z0-1073-24 certification exam and want to get Oracle certificate that make them go further in their career. This time you should be thought of ActualTestsIT website that is good helper of your exam. ActualTestsIT powerful exam dumps is experiences and results summarized by 1z0-1073-24 experts in the past years, standing upon the shoulder of predecessors, it will let you further access to success.

## Oracle Inventory Cloud 2024 Implementation Professional Sample Questions (Q42-Q47):

### NEW QUESTION # 42

Set Up Back-to-Back Transfer Flow

The topic explains what you need to do for setting up back-to-back transfer flow.

In the Oracle Product Information Management, ensure that the Item is Back-to-Back enabled.

In Oracle Global Order Promising:

- 1.Set up a global sourcing rule with Type as Transfer from. Set the organization as the organization requesting the transfer (example, Warehouse 1).
- 2.Set up a local sourcing rule for the organization (in this example, Warehouse 1) Type as Transfer from, from the organization that has the stock from which the transfer will take place (example, Warehouse 2).
- 3.Set up an ATP rule with the Promising Mode as Supply chain availability search.
- 4.Ensure that the Supply chain availability search attributes are enabled according to your requirements. For example, you might want the application to search components and resources to include on-hand or in-transit Supply Types or fulfillment lines Demand

Types.

5. Set the ATP Rule Assignment as required.

6. Set the sourcing assignments for the sourcing rules that you defined in steps 1 and 2.

7. Ensure that the assignment level used for the global sourcing rule doesn't include any Organization.

8. Refresh and restart the Order Promising Server for ATP Rules and Sourcing.

With this setup:

\* The global rule is used to source the item from Warehouse 1 if there is stock available to reserve.

\* If there's no stock on hand, Global Order Promising uses the local rule to transfer the item from Warehouse 2 to Warehouse 1.

### Answer:

Explanation:

See the Explanation for the complete solution.

Explanation:

Set Up Back-to-Back Transfer Flow in Oracle Cloud

The Back-to-Back (B2B) Transfer Flow allows organizations to move inventory from one warehouse (source) to another warehouse (destination) when stock is unavailable in the fulfillment location. This setup ensures that Oracle Global Order Promising (GOP) can automatically determine the best supply source and execute the transfer process efficiently.

1. Prerequisites: Enable Back-to-Back for Items

Before setting up the transfer flow, ensure that the item is Back-to-Back enabled in Oracle Product Information Management (PIM):

\* Navigate to Oracle Product Information Management (PIM).

\* Search for the item you want to enable for back-to-back fulfillment.

\* In the item definition, enable the "Back-to-Back Enabled" attribute.

\* Save and publish the item updates.

# This ensures that the item can participate in the B2B fulfillment process.

2. Configure Global Order Promising (GOP) for Back-to-Back Transfer Flow In Oracle Global Order Promising (GOP), configure the system to determine the best transfer source when fulfilling back-to-back orders.

Step 1: Create a Global Sourcing Rule (Type: Transfer From)

\* Navigate to Oracle Global Order Promising (GOP).

\* Create a Global Sourcing Rule with the following details:

\* Type: "Transfer From"

\* Source Organization: Warehouse 1 (Requesting warehouse or fulfillment location).

# This rule ensures that items are sourced from Warehouse 1 whenever stock is available.

Step 2: Create a Local Sourcing Rule (Type: Transfer From)

\* Create a Local Sourcing Rule for Warehouse 1 as follows:

\* Type: "Transfer From"

\* Source Organization: Warehouse 2 (Stock-holding warehouse).

# This rule ensures that if Warehouse 1 does not have stock, the system transfers items from Warehouse 2.

Step 3: Set Up an ATP Rule for Availability Check

\* Create an ATP Rule (Available-to-Promise Rule) with the following parameters:

\* Promising Mode: "Supply Chain Availability Search".

\* Enable attributes for supply chain availability search based on business needs.

\* Configure ATP search to consider on-hand stock, in-transit inventory, components, and resources if needed.

# This ensures that GOP can evaluate stock levels across multiple locations.

Step 4: Assign ATP Rule to Organizations

\* Assign the ATP Rule to the appropriate organizations.

\* Ensure that the rule applies to Warehouse 1 and Warehouse 2 based on their roles in the sourcing process.

# This enables availability checking when processing sales orders.

Step 5: Assign Sourcing Rules to Organizations

\* Assign the Global Sourcing Rule to the enterprise-wide sourcing assignment.

\* Assign the Local Sourcing Rule to Warehouse 1, specifying Warehouse 2 as the sourcing location.

\* Ensure that the assignment level for the global sourcing rule does not include a specific organization (it should apply at a broader level).

# This ensures that Oracle GOP prioritizes sourcing stock from Warehouse 1 first and transfers from Warehouse 2 if needed.

Step 6: Refresh and Restart Order Promising Server

\* Once the sourcing rules and ATP configurations are in place:

\* Refresh Oracle Global Order Promising (GOP) Rules.

\* Restart the Order Promising Server to apply sourcing and ATP rule changes.

# This step ensures that all updates take effect and are used in future order promising decisions.

3. Expected Behavior After Setup

\* If Warehouse 1 has stock # GOP reserves inventory and processes the sales order immediately.

\* If Warehouse 1 does not have stock # GOP triggers a transfer order to move stock from Warehouse 2 to Warehouse 1.  
 \* Once the transfer order is fulfilled and received, the sales order is shipped to the customer.  
 # This ensures automated order fulfillment with minimal manual intervention.  
 4. Benefits of Back-to-Back Transfer Flow in Oracle Cloud  
 # Optimized Inventory Utilization - Uses stock efficiently across multiple warehouses.# Automated Stock Transfers - Eliminates manual intervention by automatically moving stock when needed.# Reduced Procurement Costs - Moves existing inventory instead of purchasing new stock.# Faster Order Fulfillment  
 - Reduces lead times by sourcing from internal stock before procurement.# Seamless Oracle Cloud Integration - Works across Oracle Order Management, Inventory, GOP, and Supply Chain Orchestration.

#### NEW QUESTION # 43

Your warehouse manager is unable to find the transfer order in the return receipt task. What could be the reason for this?

- A. The transfer is to an inventory destination.
- B. The transfer is between organizations.
- C. Only requestors can create returns.
- D. The transfer type is Direct. (\*)

**Answer: D**

#### NEW QUESTION # 44

On the Manage Supply Request Exception page, your supply line is in exception due to missing data. Which action can be performed on this supply line?

- A. The supply line can be made inactive.
- B. Changes can be made on the supply line and it can be resubmitted for processing.
- C. The supply line can be cancelled.

**Answer: C**

#### NEW QUESTION # 45

Your quality department wants to return some of the items to the supplier. However, you are unable to find the corresponding purchase orders to create the return. What could be the reason?

- A. The receipt includes consigned items.
- B. Receipt Close Point is set to Delivered.
- C. The purchase order is in the Finally Closed status.

**Answer: C**

#### NEW QUESTION # 46

You created a consigned agreement with a supplier. The supplier shipped the goods, which you received in your receiving area. After two days, you transferred the goods from receiving into your inventory and used it for your interorganization transfer order. Where is the ownership of the goods?

- A. The ownership is with the supplier because the supplier has not sent the consumption advice.
- B. The ownership changes from the supplier to the buyer as soon as the goods are received in the receiving area.
- C. The ownership is with the buyer due to interorganization consigned inventory movement.
- D. The ownership is with the supplier because the goods are not yet consumed.

**Answer: C**
