Those who are ambitious to obtain Designing and Implementing Secure Cloud Access for Users and Endpoints certification mainly include office workers; they expect to reach a higher position and get handsome salary, moreover, a prosperous future. Through our 300-740 test torrent, we expect to design such an efficient study plan to help you build a high efficient learning attitude for your further development. Our study materials are cater every candidate no matter you are a student or office worker, a green hand or a staff member of many years' experience, 300-740 Certification Training is absolutely good choices for you. Therefore, you have no need to worry about whether you can pass the exam, because we guarantee you to succeed with our technology strength.

What is more difficult is not only passing the Financials in Designing and Implementing Secure Cloud Access for Users and Endpoints (300-740) certification exam, but the acute anxiety and the excessive burden also make the candidate nervous to qualify for the Designing and Implementing Secure Cloud Access for Users and Endpoints (300-740) certification. If you are going through the same tough challenge, do not worry because Prep4cram is here to assist you.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.
Topic 2	Network and Cloud Security: This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.
Topic 3	Application and Data Security: This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
Topic 4	Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 5	Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.
Topic 6	Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 7	SAFE Key Structure: This section of the exam measures skills of Network Security Designers and focuses on the SAFE framework's key structural elements. It includes understanding 'Places in the Network'—the different network zones—and defining 'Secure Domains' to organize security policy implementation effectively.
Topic 8	User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 9	SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.

Cisco Designing and Implementing Secure Cloud Access for Users and

Endpoints Sample Questions (Q81-Q86):

NEW QUESTION # 81

OIDC (OpenID Connect) is primarily utilized for:

- A. Monitoring user activities
- B. Increasing network latency
- C. Disconnecting user sessions
- **D. Authenticating users via an identity provider**

Answer: D

NEW QUESTION # 82

Refer to the exhibit. An engineer must block internal users from accessing Facebook and Facebook Apps. All other access must be allowed. The indicated policy was created in Cisco Secure Firewall Management Center and deployed to the internet edge firewall; however, users still can access Facebook. Which two actions must be taken to meet the requirement? (Choose two.)

- A. Set Applications to Facebook and Facebook Apps for rule 2.
- **B. Set Destination Zones to outside for rule 1.**
- **C. Set Source Zones to inside for rule 1.**
- D. Set Destination Zones to outside for rule 2.
- E. Set Source Zones to inside for rule 2.

Answer: B,C

Explanation:

In the provided screenshot of Cisco Secure Firewall Management Center (FMC), the rule labeled "Block Facebook" is intended to block access to Facebook and Facebook Apps. However, the rule lacks correct zone configurations, which is why the block is ineffective.

Per Cisco's best practices outlined in the Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT) documentation and Cisco Secure Firewall documentation:

The source zone should reflect where the traffic is originating from—in this case, from internal users.

Therefore, Source Zone must be set to inside (Answer: E).

The destination zone should reflect where the traffic is headed—in this case, towards the internet. So, Destination Zone must be set to outside (Answer: D).

Without properly defining source and destination zones, FMC rules may not match the traffic correctly, resulting in traffic being incorrectly allowed.

NEW QUESTION # 83

Cloud security attack tactics often include:

- A. Exploiting misconfigured cloud storage
- B. Social media marketing strategies
- C. Physical security breaches
- D. Enhancing cloud service offerings

Answer: A

NEW QUESTION # 84

A network administrator uses Cisco Umbrella to protect internal users from malicious content. A customer is using an IPsec tunnel to connect to an Umbrella Organization. The administrator was informed about a zero-day vulnerability that infects user machines and uploads sensitive data through the RDP port. The administrator must ensure that no users are connected to the internet using the RDP protocol. Which Umbrella configuration must the administrator apply?

- A. DNS policy to block Remote Desktop Manager application type
- B. Data loss prevention policy to block all file uploads with RDP application mime type
- C. Firewall policy and set port 3389 to be blocked for all outgoing traffic
- D. Web policy to block Remote Desktop Manager application type

Answer: C

Explanation:

The Remote Desktop Protocol (RDP) uses TCP port 3389. Cisco Umbrella includes a cloud-delivered firewall that can be used to block outbound traffic by port. In this case, since the RDP communication needs to be prevented regardless of application name resolution, the best approach is to use a Firewall policy in Umbrella to block port 3389 traffic across the tunnel.

NEW QUESTION # 85

How does Cisco XDR perform threat prioritization by using its visibility across multiple platforms?

- A. By using a fixed priority system for all platforms
- B. By prioritizing threats based on their frequency across platforms
- C. By assigning priority based on the detection platform
- D. By correlating detection risk and asset value at risk

Answer: D

Explanation:

Cisco Extended Detection and Response (XDR) leverages telemetry from Cisco Secure Endpoint, Secure Email, Secure Network Analytics, and other sources to correlate threat detections with contextual data, such as asset value and business impact. This allows Cisco XDR to prioritize threats not only by the risk of the detection but also by the importance of the affected asset-essentially assessing the risk to business. This dynamic and context-aware prioritization method enables security teams to address the most impactful threats first.
