Real 800-150 Dumps - 800-150 Upgrade Dumps

We provide a wide range of learning and preparation methodologies to the customers for the 800-150 complete training. After using the 800-150 products, success would surely be the fate of customer because, self-evaluation, highlight of the mistakes, time management and sample question answers in comprehensive manner, are all the tools which are combined to provide best possible results. We are also offering 100% money back guarantee to the customers in case they don't achieve passing scores in the Cisco 800-150 in the first attempt.

The itPass4sure wants to win the trust of Supporting Cisco Devices for Field Technicians 800-150 exam candidates at any cost. To achieve this objective the itPass4sure is offering 800-150 exam passing money-back guarantee. Now your investment with itPass4sure is secured from any risk. If you fail the Supporting Cisco Devices for Field Technicians 800-150 Exam despite using PMI Dumps, you can claim your paid amount. Thanks and best of luck in your exam and career!

Free PDF 800-150 - Unparalleled Real Supporting Cisco Devices for Field Technicians Dumps

The evergreen field of Cisco is so attractive that it provides non-stop possibilities for the one who passes the Cisco 800-150 exam. So, to be there on top of the Cisco sector, earning the Supporting Cisco Devices for Field Technicians (800-150) certification is essential. Because of using outdated 800-150 study material, many candidates don't get success in the Supporting Cisco Devices for Field Technicians (800-150) exam and lose their resources.

Cisco 800-150 Exam Syllabus Topics:

Topic	Details
Topic 1	• Cisco Hardware Replacement: This section of the exam measures the skills of a Technical Support Engineer and teaches how to safely and correctly replace Cisco hardware. It explains safety procedures such as creating safe work zones and handling electrostatic discharge. Students learn the step-by-step processes to replace a wide range of Cisco devices, from switches and routers to firewalls, UCS servers, and collaboration endpoints. It also covers configuring Cisco NX-OS software, including understanding operating modes, boot procedures, and password recovery, and introduces Cisco collaboration endpoint solutions like IP phones and video systems.

Topic 2	• Cisco Infrastructure and Collaboration Infrastructure: This section of the exam measures the skills of a Collaboration Engineer and focuses on Cisco infrastructure devices, endpoints, and collaboration technologies. It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions.
Topic 3	• Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements.
Topic 4	• Networking Foundations: This section of the exam measures the skills of a Network Engineer and covers the basic building blocks of computer networking. It explains different types of networks like local area networks and wireless networks, and introduces lightweight wireless LANs. It describes the layers of communication models like the OSI model and TCP • IP stack, and explains how data moves across networks. It also discusses the physical cabling used in networks, such as Ethernet and fiber optics. Students will learn about network switching, IP addressing, subnetting, and routing at Layer 3. The section also introduces Cisco's campus network devices, data center switches, UCS servers, and collaboration devices, describing their roles and functions in the network.
Topic 5	• Cisco UCS and Data Center Architecture: This section of the exam measures the skills of a Data Center Engineer and introduces Cisco's UCS and data center solutions. It explains the devices found in a data center, including switches, UCS servers, and director switches, and describes different server deployment models. Students will also learn about virtualization components like virtual machines, hypervisors, cloud computing concepts, and deployment models. The section covers how Cisco UCS devices fit into campus networks, edge locations, and data centers, and explains the key components and connections used in UCS architecture.

Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q49-Q54):

NEW QUESTION # 49
Which command is used to specify the source for the Cisco IOS software image to load during the boot process?

- A. boot source
- B. boot system
- C. boot image
- D. boot ios

Answer: B

Explanation:
The boot system command is used in global configuration mode to specify the source and filename of the Cisco IOS software image that should be loaded during the device's boot process. This command ensures that the device loads a specific IOS image, whether it's stored locally in flash or fetched from a TFTP server.
Syntax example:
boot system flash:c1900-universalk9-mz.SPA.157-3.M3.bin
* boot image, boot ios, and boot source are invalid or non-existent in standard Cisco IOS.

NEW QUESTION # 50
Which pod-based deployment model provides the most flexibility and scalability in a modern data center topology?

- A. Fabric Extender model
- B. End of Row (EoR)
- C. Top of Rack (ToR)
- D. Spine-and-Leaf

Answer: D

Explanation:
TheSpine-and-Leafarchitecture is the preferredpod-based deployment modelin modern data centers because of itshigh scalability and flexibility. In this topology:
* Leaf switchesconnect to servers and act as the access layer.
* Spine switchesfunction as the core layer, interconnecting all leaf switches.
This non-blocking, highly redundant model supportspredictable latency, easy horizontal scaling, and load balancing, making it ideal for cloud-scale and virtualized environments.
* Top of Rack (ToR)andEnd of Row (EoR)are physical cabling layouts that do not inherently provide the same level of architectural scalability.
* Fabric Extender modelsextend switch ports but depend on upstream switches for intelligence, limiting flexibility.

NEW QUESTION # 51
Refer to the exhibit. Which replaceable components are highlighted on the three different series of Cisco UCS servers?

- A. fan modules
- B. power supplies
- C. GPU sockets
- D. storage modules

Answer: A

Explanation:
The highlighted components in all three Cisco UCS server models (5108 B-Series Blade Server Chassis, X9508 X Series Modular Server Chassis, and C225 M6 Rack Server) are fan modules, which are field- replaceable units responsible for cooling the system.
The highlighted components in the images correspond tocooling fans- these are essential for maintaining optimal thermal conditions within each Cisco UCS server type.Here's a breakdown of what's visible in each:
* Cisco UCS 5108 B-Series Blade Server Chassis: The highlighted vertical rectangular components are fan modules, which provide high-efficiency airflow for the densely packed blades.
* Cisco UCS X9508 X-Series Modular Server Chassis: The front-facingfan traysare clearly marked, used to cool the modular nodes and shared infrastructure.
* Cisco UCS C225 M6 Rack Server: The highlighted components on the side of the motherboard are alsofan modules, directly responsible for cooling the CPU, memory, and other internal components.
These fans arefield-replaceable units (FRUs)and are routinely accessed by technicians during preventive maintenance or fault replacement.

NEW QUESTION # 52
Which hardware platform is Cisco UnifiedCommunications Manager typically deployed on?

- A. Cisco UCS C-Series servers
- B. Cisco Catalyst switches
- C. Cisco ISR routers
- D. Cisco ASR routers

Answer: A

Explanation:
Cisco Unified Communications Manager (CUCM) is typically deployed onCisco UCS C-Series servers.
These rack-mount servers provide the necessary computing resources to support CUCM's call control and session management functions in enterprise environments. The UCS C-Series servers offer scalability, reliability, and integration capabilities essential for unified communications deployments.
Options A (Cisco ASR routers), B (Cisco Catalyst switches), and C (Cisco ISR routers) are networking devices designed for

routing and switching functions and are not intended as platforms for deploying CUCM.
Reference:Supporting Cisco Devices for Field Technicians (FLDTEC) - Cisco Equipment and Related Hardware

NEW QUESTION # 53
What is the primary function of a wireless LAN controller in a Cisco Unified Wireless Network solution?

- A. To provide wireless connectivity to LAN devices
- B. To manage and configure associated access points centrally
- C. To operate at Layer 3 of the OSI model
- D. To translate data into a frame format for transmission

Answer: B

Explanation:
TheWireless LAN Controller (WLC)plays a central role in Cisco's Unified Wireless Network solution by providing centralized management, configuration, and monitoring for multiple access points (APs). It allows for streamlined policy enforcement, seamless mobility, load balancing, and security management across wireless networks.
While WLCs facilitate wireless connectivity indirectly, their main role is tocentrally manage and control access points - not to function as Layer 3 routers or format data frames.
Reference:Supporting Cisco Devices for Field Technicians (FLDTEC) - Wireless Device Support Explanation:
The primary function of a wireless LAN controller (WLC) in a Cisco Unified Wireless Network is to centrally manage, configure, and monitor multiple access points, simplifying administration and enhancing scalability.

NEW QUESTION # 54
......

I believe that people want to have good prospects of career whatever industry they work in. Of course, there is no exception in the competitive IT industry. IT Professionals working in the IT area also want to have good opportunities for promotion of job and salary. A lot of IT professional know that Cisco Certification 800-150 Exam can help you meet these aspirations. itPass4sure is a website which help you successfully pass Cisco 800-150.
