

Real Cisco 500-710 Dumps—Attempt the Exam in the Optimal Way

DOWNLOAD the newest Lead1Pass 500-710 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1mGpCVZWt4mqftownE3R81EOaKZbilUze>

To help people pass exam easily, we bring you the latest 500-710 exam prep for the actual test which enable you get high passing score easily in test. Our study materials are the up-to-date and all 500-710 Test Answers you practiced are tested by our professional experts. Once you have well prepared with our 500-710 dumps collection, you will go through the formal test without any difficulty.

Obtaining the Cisco 500-710 Certification provides candidates with a strong foundation in the implementation of video infrastructure products. Cisco Video Infrastructure Implementation certification demonstrates a candidate's ability to install, configure, maintain, and troubleshoot videoconferencing infrastructure products from Cisco. By obtaining this certification, candidates will be able to leverage their skills in the ever-growing videoconferencing industry, and contribute to their organization's collaboration and communication needs.

Exam Cisco 500-710 Outline, 500-710 Pdf Demo Download

People who appear in the test of the Cisco Video Infrastructure Implementation (500-710) certification face the issue of not finding up-to-date and real exam questions. Lead1Pass is here to resolve all of your problems with its actual and latest Cisco 500-710 Questions. You can successfully get prepared for the 500-710 examination in a short time with the aid of these Cisco Video Infrastructure Implementation (500-710) exam questions.

Cisco 500-710 Certification Exam consists of 60-70 multiple-choice questions that must be completed within 90 minutes. 500-710 exam is available in English and Japanese and can be taken at Pearson VUE testing centers worldwide. The cost of the exam varies by location, but typically ranges from \$300 to \$350 USD. Candidates must achieve a passing score of 70% or higher to earn the certification.

Cisco Video Infrastructure Implementation Sample Questions (Q20-Q25):

NEW QUESTION # 20

An engineer must match any incoming call to the Expressway that is searching for an E.164 address of only 6 digits and append the domain cisco.com to the end. Which pattern match and replace string using regular expressions accomplish this task? (Choose two.)

- A. pattern match: ({5}\d)
- B. replace string: \6@cisco.com
- C. pattern match: ({6}\d)
- D. replace string: \1@cisco.com
- E. replace string: \\${cisco.com}

- F. pattern match: ({6}*)

Answer: C,D

NEW QUESTION # 21

What is the maximum network latency allowed between peers in a cluster?

- A. 30 ms total
- B. 100 ms one way
- C. 300 ms total
- D. 150 ms one-way

Answer: A

NEW QUESTION # 22

Which two administrative functions can a Cisco Spark Partner reseller perform from the Cisco Spark Management portal? (Choose two.)

- A. Quickly start customer trials.
- B. Determine Single Sign-On customer usage reports.
- C. Help to manage the customer accounts.
- D. Enable Single Sign-On and Directory sync through corporate LDAP services on-premises.
- E. Determine role-based access and view usage reports.

Answer: A,C

Explanation:

A Cisco Spark Partner reseller can perform the following administrative functions from the Cisco Spark Management portal:

* Quickly start customer trials: A partner can create a trial account for a customer and assign licenses and services to the trial users. The partner can also monitor the trial status and usage from the portal.

* Help to manage the customer accounts: A partner can view and edit the customer account details, such as the company name, address, and domain. The partner can also add or remove licenses and services, assign administrators, and manage billing and payment information.

The other options are not correct because:

* Determine Single Sign-On customer usage reports: This function is not available from the Cisco Spark Management portal. The partner can only enable or disable Single Sign-On for a customer account, but not view the usage reports.

* Enable Single Sign-On and Directory sync through corporate LDAP services on-premises: This function is not available from the Cisco Spark Management portal. The partner can only enable or disable Single Sign-On and Directory sync for a customer account, but not configure them through corporate LDAP services on-premises.

* Determine role-based access and view usage reports: This function is not available from the Cisco Spark Management portal. The partner can only assign administrators to a customer account, but not determine the role-based access. The partner can also not view the usage reports of the customer account.

NEW QUESTION # 23

Which two statements about the assignment of endpoints to a subzone are true? (Choose two.)

- A. A registration restriction rule must be configured that matches the endpoint's alias or IP subnet.
- B. A subzone membership rule must be configured that matches the endpoint's alias or IP subnet.

- C. By default, all endpoints are registered to the neighbor subzone.
- D. Endpoints making a traversal call must be registered to the traversal subzone.
- E. By default, all endpoints are registered to the default subzone.

Answer: A,B

Explanation:

- * A subzone is a logical grouping of endpoints within a zone that allows the Expressway to apply different policies and bandwidth controls to different sets of endpoints¹.
- * An endpoint is a device that can make or receive calls, such as a video conferencing system, a phone, or a soft client².
- * When an endpoint registers with the Expressway, it is assigned to a subzone based on the following criteria³:
- * If the endpoint is making a traversal call (a call that crosses a firewall or a network boundary), it is assigned to the traversal subzone. A traversal call requires a traversal client zone on the Expressway that initiates the call and a traversal server zone on the Expressway that receives the call.
- * If the endpoint is not making a traversal call, it is assigned to a subzone based on the subzone membership rules. These rules specify the range of IP addresses or alias pattern matches for each subzone. If an endpoint's IP address or alias does not match any of the membership rules, it is assigned to the default subzone.
- * If the endpoint is not allowed to register with the Expressway, it is rejected based on the registration restriction rules. These rules specify the IP addresses or aliases of the endpoints that are denied or allowed to register with the Expressway.
- * Therefore, the two statements that are true about the assignment of endpoints to a subzone are:
- * A. A registration restriction rule must be configured that matches the endpoint's alias or IP subnet. This statement is true because the registration restriction rules are used to filter out the endpoints that are not allowed to register with the Expressway based on their alias or IP subnet³.
- * E. A subzone membership rule must be configured that matches the endpoint's alias or IP subnet. This statement is true because the subzone membership rules are used to assign the endpoints that are allowed to register with the Expressway to the appropriate subzone based on their alias or IP subnet³.
- * The other options are incorrect because:
- * B. Endpoints making a traversal call must be registered to the traversal subzone. This statement is false because the traversal subzone is not a subzone that endpoints can register to, but a subzone that endpoints are assigned to when they make a traversal call³.
- * C. By default, all endpoints are registered to the default subzone. This statement is false because not all endpoints are registered to the default subzone, only those that do not match any subzone membership rules or make a traversal call³.
- * D. By default, all endpoints are registered to the neighbor subzone. This statement is false because the neighbor subzone is not a subzone that endpoints can register to, but a subzone that represents a neighbor zone (a logical connection to another Expressway or a third-party device) on the Expressway.

NEW QUESTION # 24

Integrated Development Environment helps you to develop, test, and build an application. Which option is an IDE tool that can be used with Cisco Spark?

- A. Pythonanywhere
- **B. GitHub**
- C. OSX: Atom
- D. Linux: Brackets
- E. Windows: Notepad++

Answer: B
