EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

Question:

An IT team needs to connect a compute system to a switch in their SAN. What is the port type?

- A. E_Port
- B. N_port
- C. F_port
- D. G_port

Answer: C

Explanation:

An F_port (Fabric port) is used on a Fibre Channel switch to connect N_ports (Node ports) on end devices like servers and storage arrays.

* N_port: On the compute system (HBA).

* F_port: On the switch, accepting N_port connections.

* E_port: For switch-to-switch ISL (Inter-Switch Link) connections.

* G_port: A generic port that can operate as either an F_port or an E_port (not the direct answer in this scenario).

NEW QUESTION # 30

Question:

What is a key benefit for deploying a remote data protection and recovery solution in a data center environment?

- A. Avoids security risks that expose business data
- B. Reduces the cost of protecting data
- C. Reduces required maintenance time for IT resources
- **D. Maximizes application and information availability**

Answer: D

Explanation:

Remote data protection and recovery solutions, like replication and cloud-based backup, are primarily designed to ensure maximum application and information availability. They protect data in the event of:

* Local failures (disk, server, or site outages)

* Natural disasters (floods, fires)

* Ransomware attacks

By having off-site copies and failover options, businesses maintain continuous access to critical data.

NEW QUESTION # 31

Question:

What is the main advantage of 5G technology over previous generations of mobile networks?

- **A. Increased speed and capacity**
- B. Reduced distance
- C. Lower cost
- D. Increased bandwidth

Answer: A

Explanation:

5G represents the fifth generation of mobile networks and offers several significant advantages over 4G, 3G, and earlier generations:

* Increased speed: 5G delivers data speeds up to 100 times faster than 4G LTE.

* Enhanced capacity: Supports more devices per square kilometer, crucial for IoT and smart cities.

* Low latency: Reduces delay in data transmission, enabling real-time applications like remote surgeries or autonomous vehicles.

* Increased bandwidth (Option B) is part of the overall increased capacity.

* Reduced distance (Option C) is incorrect; 5G uses shorter wavelengths, meaning shorter range.

* Lower cost (Option D) is not a key advantage of 5G technology itself.

NEW QUESTION # 32

Question:

A company is experiencing slow write performance on its RAID 6 array. What is the most likely cause of this performance bottleneck?

- A. Write penalty associated with dual parity calculations
- B. High read I/O load on the array
- C. Increased network latency between the server and the storage array
- D. Insufficient storage on the RAID controller

Answer: A

Explanation:

RAID 6 uses dual parity to provide fault tolerance, which requires additional calculations during write operations. This introduces a write penalty, as the system must compute and write two sets of parity data for each write operation, leading to slower write performance compared to other RAID levels.

* Insufficient storage on the RAID controller: Would affect storage capacity, not write performance.

* High read I/O load on the array: Impacts read performance, not write performance.

* Increased network latency: Affects data transfer times but not the internal write operations of the RAID array.

* Write penalty associated with dual parity calculations: The most likely cause of slow write performance in RAID 6.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: RAID.

NEW QUESTION # 33

Question:

What is a read miss in cache operations?

- A. Fetching requested data that is already in cache
- B. Fetching data that is not in cache
- C. Deleting data from the cache
- D. Writing data to the cache

Answer: B

Explanation:

A read miss occurs when the data requested by the host is not available in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.

* Cache hit: Data is already in cache # faster response.

* Cache miss (read miss): Data not in cache # fetched from the disk.
