The world is rapidly moving forward due to the prosperous development of information. Our company is also making progress in every side. The first manifestation is downloading efficiency. A lot of exam candidates these days are facing problems like lacking of time, or lacking of accessible ways to get acquainted with high efficient SC-100 Guide question like ours. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our SC-100 exam dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

The ActualPDF is committed to making the Channel Partner Program SC-100 exam preparation journey simple, smart, and swift. To meet this objective the ActualPDF is offering Microsoft SC-100 practice exam questions with top-rated features. These features are updated and real Microsoft Cybersecurity Architect SC-100 exam questions, availability of Channel Partner Program Microsoft Cybersecurity Architect SC-100 Exam real questions in three easy-to-use and compatible formats, three months free updated Microsoft Cybersecurity Architect SC-100 exam questions download facility, affordable price and 100 percent Microsoft Cybersecurity Architect SC-100 exam passing money back guarantee.

Free PDF Quiz 2025 Microsoft Efficient Valid Dumps SC-100 Book

Compared to other products in the industry, our SC-100 actual exam has a higher pass rate. If you really want to pass the exam, this must be the one that makes you feel the most suitable and effective. According the data which is provided and tested by our loyal customers, our pass rate of the SC-100 Exam Questions is high as 98% to 100%. It is hard to find such high pass rate in the market. And the quality of the SC-100 training guide won't let you down.

Microsoft Cybersecurity Architect Sample Questions (Q220-Q225):

NEW QUESTION # 220
Your company is migrating data to Azure. The data contains Personally Identifiable Information (Pll). The company plans to use Microsoft Information Protection for the Pll data store in Azure. You need to recommend a solution to discover Pll data at risk in the Azure resources.
What should you include in the recommendation? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

To connect the Azure data sources to
Microsoft Information Protection: ▼

| Azure Purview |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud Apps |
| Microsoft Information Protection |

To triage security alerts related to
resources that contain PII data: ▼

| Azure Monitor |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud |
| Microsoft Defender for Cloud Apps |

Answer:

Explanation:

To connect the Azure data sources to
Microsoft Information Protection: ▼

| Azure Purview |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud Apps |
| Microsoft Information Protection |

To triage security alerts related to
resources that contain PII data:

| Azure Monitor |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud |
| Microsoft Defender for Cloud Apps |

Explanation:
Graphical user interface, text, application Description automatically generated

To connect the Azure data sources to Microsoft Information Protection:

| Azure Purview |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud Apps |
| Microsoft Information Protection |

To triage security alerts related to resources that contain PII data:

| Azure Monitor |
| Endpoint data loss prevention |
| Microsoft Defender for Cloud |
| Microsoft Defender for Cloud Apps |

Prioritize security actions by data sensitivity, https://docs.microsoft.com/en-us/azure/defender-for-cloud /information-protection. As to Azure SQL Database Azure SQL Managed Instance Azure Synapse Analytics (Azure resources as well): https://docs.microsoft.com/en-us/azure/azure-sql/database/data-discovery-and- classification-overview?view=azuresql

NEW QUESTION # 221
You have a Microsoft 365 E5 subscription.
You are designing a solution to protect confidential data in Microsoft SharePoint Online sites that contain more than one million documents.
You need to recommend a solution to prevent Personally Identifiable Information (PlI) from being shared.
Which two components should you include in the recommendation? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. data loss prevention (DLP) policies
- B. sensitivity label policies
- C. retention label policies
- D. eDiscovery cases

Answer: A,B

Explanation:
Explanation
Data loss prevention in Office 365. Data loss prevention (DLP) helps you protect sensitive information and prevent its inadvertent disclosure. Examples of sensitive information that you might want to prevent from leaking outside your organization include financial data or personally identifiable information (PII) such as credit card numbers, social security numbers, or health records. With a data loss prevention (DLP) policy, you can identify, monitor, and automatically protect sensitive information across Office 365.
Sensitivity labels from Microsoft Purview Information Protection let you classify and protect your organization's data without hindering the productivity of users and their ability to collaborate.Plan for integration into a broader information protection scheme. On top of coexistence with OME, sensitivity labels can be used along-side capabilities likeMicrosoft Purview Data Loss Prevention (DLP) and Microsoft Defender for Cloud Apps.

NEW QUESTION # 222
Your company has an Azure App Service plan that is used to deploy containerized web apps. You are designing a secure DevOps strategy for deploying the web apps to the App Service plan. You need to recommend a strategy to integrate code scanning tools into a secure software development lifecycle. The code must be scanned during the following two phases:

Uploading the code to repositories Building containers

Where should you integrate code scanning for each phase? To answer, select the appropriate options in the answer area.

Answer Area

Uploading code to repositories:
- Azure Boards
- Azure Pipelines
- GitHub Enterprise
- Microsoft Defender for Cloud

Building containers:
- Azure Boards
- Azure Pipelines
- GitHub Enterprise
- Microsoft Defender for Cloud

Answer:

Explanation:

Answer Area

Uploading code to repositories:
- Azure Boards
- Azure Pipelines
- GitHub Enterprise
- Microsoft Defender for Cloud

Building containers:
- Azure Boards
- Azure Pipelines
- GitHub Enterprise
- Microsoft Defender for Cloud

Explanation

Uploading code to repositories: GitHub Enterprise

Building containers: Azure Pipelines

NEW QUESTION # 223

Hotspot Question

You have an Azure subscription that contains a virtual network named VNet1. VNet1 contains a

10-node virtual machine scale set that hosts a web search app named App1. Customers access App1 from the internet. The nodes establish outbound HTTP and HTTPS connections to the internet.

You need to recommend a network security solution for App1. The solution must meet the following requirements:

- Inbound connections to App1 that contain security threats specified

in the Core Rule Set (CRS) from the Open Web Application Security

Project (OWASP) must be blocked.

- Outbound HTTP and HTTPS connections from the virtual machine scale

set that contain security threats identified by the Microsoft Defender

Threat Intelligence (Defender TI) feed must be blocked.

What should you include in the recommendation? To answer, select the options in the answer area.

NOTE: Each correct answer is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Azure Web Application Firewall (WAF)

Inbound connections to App1 that contain security threats specified in the Core Rule Set (CRS) from the Open Web Application Security Project (OWASP) must be blocked.

The Azure Web Application Firewall (WAF) on Azure Application Gateway actively safeguards your web applications against common exploits and vulnerabilities. As web applications become more frequent targets for malicious attacks, these attacks often exploit well-known vulnerabilities such as SQL injection and cross-site scripting.

WAF on Application Gateway is based on the Core Rule Set (CRS) from the Open Web Application Security Project (OWASP).

Box 2: Azure Firewall

Outbound HTTP and HTTPS connections from the virtual machine scale set that contain security threats identified by the Microsoft Defender Threat Intelligence (Defender TI) feed must be blocked.

Azure Firewall threat intelligence-based filtering

You can enable Threat intelligence-based filtering for your firewall to alert and deny traffic from/to known malicious IP addresses, FQDNs, and URLs. The IP addresses, domains and URLs are sourced from the Microsoft Threat Intelligence feed, which includes multiple sources including the Microsoft Cyber Security team. Intelligent Security Graph powers Microsoft threat intelligence and uses multiple services including Microsoft Defender for Cloud.
