SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q61-Q66):

NEW QUESTION # 61

(When customers build a custom AI solution on a hyperscaler, what are some of the complexities they would have to deal with?

Note: There are 3 correct answers to this question.)

- A. Management of GPU clusters
- B. Data replication
- C. Integration of identity management
- D. Choice of the wrong LLM
- E. Implementation of security measures

Answer: A,C,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Building custom AI solutions directly on hyperscalers introduces complexities such as implementing security measures to ensure compliance and data protection, integrating identity management for secure access control, and managing GPU clusters for scalable AI training and inference. These challenges arise from the need to handle infrastructure, integration, and operations manually, which SAP BTP mitigates by providing a standardized, hyperscaler-agnostic platform.

Exact extracts supporting this:

"Transitioning to a hyperscaler can help, but may still require dealing with integration and security complexities." learning.sap.com SAP AI Core is "designed to manage the execution and operations of AI assets in a standardized, scalable, and hyperscaler-agnostic manner," implying complexities like GPU management on hyperscalers. help.sap.com community.sap.com Integration challenges include "typical integration challenges and the integration journey in a multi-cloud environment," encompassing identity management. community.sap.com Other options are incorrect because:

Option C: While selecting an appropriate LLM is important, the complexity is not specifically "choice of the wrong LLM" but rather model management; SAP emphasizes broader operational issues.

Option E: Data replication is a data management task but not highlighted as a primary complexity in hyperscaler AI builds; focus is on security, integration, and infrastructure.

NEW QUESTION # 62

Which protocol enables autonomous AI agents to discover each other, delegate tasks, and collaborate across platforms?

- A. Agent-to-Orchestrator (A2O)
- B. Agent2Agent (A2A)
- C. Agent Hub
- D. Model Context Protocol (MCP)

Answer: B

Explanation:

The Agent2Agent (A2A) protocol enables autonomous AI agents to discover each other, delegate tasks, and collaborate across platforms, as detailed in SAP Business AI documentation. This protocol facilitates direct communication and coordination between AI agents, allowing them to share tasks and data seamlessly within and across SAP ecosystems. This ensures efficient, decentralized collaboration for complex workflows. The Agent-to-Orchestrator (A2O) protocol focuses on orchestration, not direct agent collaboration. The Model Context Protocol (MCP) and Agent Hub are not defined protocols in SAP's framework for this purpose. A2A's design supports scalable, autonomous AI operations, enhancing enterprise agility and interoperability.

NEW QUESTION # 63

Your customer wants to deploy a generative AI model to summarize customer feedback across channels?

Which AI Foundation component is best suited for this task?

- A. SAP Document AI
- B. SAP Knowledge Graph
- C. Joule Studio
- D. Generative AI hub

Answer: D

NEW QUESTION # 64

With respect to AI agents, which functionalities are offered by the executive dashboard in SAP LeanIX? Note: There are 3 correct answers to this question.

- A. Deployment opportunities
- B. Business impact
- C. Adoption trends
- D. Automation gaps
- E. Skill shifts

Answer: B,C,E

NEW QUESTION # 65

(What is Machine Learning?)

- A. A form of deep learning that utilizes foundation models, like large language models, to create new content, including text, images, sound, and videos, based on the data it was trained on.
- B. AI systems that use self-supervised learning on vast data to perform a variety of tasks, such as writing documents or creating images.
- C. A technology that equips machines with human-like capabilities such as problem-solving, visual perception, speech recognition, decision-making, and language translation.
- D. A subset of AI that focuses on enabling computer systems to learn and improve from experience or data, incorporating elements from fields like computer science, statistics, and psychology.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Machine Learning is defined as a subset of AI that enables computer systems to learn and improve from experience or data, incorporating elements from fields like computer science, statistics, and psychology. This distinguishes it from general AI, generative AI, or foundation models, focusing on data-driven learning without explicit programming.

Exact extracts supporting this:

"Machine learning is a subset of artificial intelligence (AI) in which computers learn from data and improve with experience without being explicitly programmed."sap.com

"Machine learning (ML) is a subset of AI that enables computer systems to learn and improve from experience or data, and incorporates elements from fields like computer science, statistics, and psychology."sap.com

"Machine learning is a subset of artificial intelligence (AI). It is focused on teaching computers to learn from data and to improve with experience - instead of ..."learning.sap.com Other options are incorrect because:

Option A: This describes foundation models or generative AI systems that use self-supervised learning for multi-task performance, not specifically machine learning.

Option C: This refers to generative AI, a specific application of deep learning using foundation models for content creation.

Option D: This defines artificial intelligence in general, encompassing human-like capabilities beyond just learning from data.
