Oracle 1z0-1057-24 Questions For Guaranteed Success [2025]

Our 1z0-1057-24 exam braindumps have become a brand that is good enough to stand out in the market. The high quality product like our 1z0-1057-24 study quiz has no need to advertise everywhere, and exerts influential effects which are obvious and everlasting during your preparation. The exam candidates of our 1z0-1057-24 Study Materials are the best living and breathing ads. Just look at the comments on the 1z0-1057-24 training guide, you will know that how popular they are among the candidates.

Oracle Project Management Cloud 2024 Implementation Professional Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which three Cost Collection Flexfield core attributes can be derived during import if not explicitly entered in a transaction document? (Choose three.)

- **A. Expenditure Type**
- **B. Capitalizable Flag**
- C. Funding Source
- **D. Billable Flag**
- E. Work Type

Answer: A,B,D

Explanation:

The Cost Collection Flexfield is a descriptive flexfield that captures additional information about project costs. It has three core attributes that are required for every cost transaction: Billable Flag, Expenditure Type, and Capitalizable Flag. These attributes can be derived during import if not explicitly entered in a transaction document, based on various rules and sources such as expenditure type defaults, project type defaults, transaction source defaults, etc. Funding Source and Work Type are not core attributes of the Cost Collection Flexfield, but context-sensitive segments that can be optionally enabled for certain transaction sources or business units. These segments capture additional information about how the costs are funded or what type of work is performed.

NEW QUESTION # 55

Which three are valid password complexity criteria while setting up password policies? (Choose three.)

- **A. Very Complex: At least 8 characters, 1 uppercase, 1 number, and 2 special characters**
- **B. Complex: At least 8 characters, 1 uppercase, and 1 number**
- C. Very Complex: At least 6 characters, 1 uppercase, 1 number, and 1 special character

- D. Simple: At least 8 characters and 1 number
- E. Very Complex: At least 8 characters, 1 uppercase, 1 number, and 1 special character

Answer: A,B,E

Explanation:

Password complexity criteria are criteria that determine how strong or secure a password must be for a user account. Password complexity criteria can include requirements such as minimum length, uppercase letters, lowercase letters, numbers, special characters, etc. Three of the valid password complexity criteria while setting up password policies are:

* Complex: At least 8 characters, 1 uppercase, and 1 number

* Very Complex: At least 8 characters, 1 uppercase, 1 number, and 2 special characters

* Very Complex: At least 8 characters, 1 uppercase, 1 number, and 1 special character Simple: At least 8 characters and 1 number is not a valid password complexity criterion while setting up password policies, as this criterion does not meet the minimum security standards for Oracle Cloud applications.

Very Complex: At least 6 characters, 1 uppercase, 1 number, and 1 special character is also not a valid password complexity criterion while setting up password policies, as this criterion does not meet the minimum length requirement of 8 characters for Oracle Cloud applications. NEW QUESTION # 56

Which precedence order is used by the system for labor schedules to distribute payroll cost?

- A. Assignment > Element > Assignment Element
- B. Assignment > Assignment Element > Element
- C. Element > Assignment Element > Assignment
- D. Assignment Element > Element > Assignment

Answer: B

Explanation:

The precedence order that is used by the system for labor schedules to distribute payroll cost is Assignment > Assignment Element > Element. This means that the system first looks for a labor schedule that is assigned to the employee assignment, then for a labor schedule that is assigned to the payroll element of the employee assignment, and finally for a labor schedule that is assigned to the payroll element itself. The system uses the first labor schedule that it finds in this order to distribute the payroll cost to projects and tasks based on the hours and rates defined in the schedule. NEW QUESTION # 57

Which step within the functional setup manager helps you to move your verified setup data from the test environment to a production environment?

- A. Deploying
- B. Planning
- C. Opting In
- D. Maintaining
- E. Setting Up

Answer: A

Explanation:

The Deploying step within the functional setup manager helps you to move your verified setup data from the test environment to a production environment. This step allows you to export and import setup data across instances using spreadsheets or configuration packages. You can also compare and validate setup data across instances using reports and dashboards.

NEW QUESTION # 58

After completing setups in a source environment, your customer wants to move the setup data to a target environment. Identify the

two statements related to task list scope, which you must consider before taking a decision based on the customer requirement. (Choose two.)

- A. A task list can be segmented by a scope value and a task can be performed for each qualifying value of the selected object.
- B. Exported setup data can be filtered by specific scope values if the business object has scope enabled for the setup data export.
- C. Exported setup data cannot be filtered by specific scope values if the business object has scope enabled for the setup data export.
- D. A scope value is used to assign users who can perform a task within an implementation project.

Answer: A,B
