C_IBP_2502 Pdf Braindumps, C_IBP_2502 Lead2pass Review

We declare that we can ensure you 100% pass, because we have the real exam questions for the C_IBP_2502 actual test. All the questions of SAP C_IBP_2502 test pdf are taken from current pool of actual test, then after refined and checked, compiled into the complete dumps. Furthermore, the answers are correct and verified by our IT experts with decades of hands-on experience. So the high quality and accuracy of C_IBP_2502 Cert Guide are without any doubt. With our 100 % pass rate history & money back guarantee, you can rest assured to choose our C_IBP_2502 vce files.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q25-Q30):

NEW QUESTION # 25
Which unified planning processes' data is commonly reviewed in SAP IBP for sales and operations? Note:
There are 2 correct answers to this question.

- A. Consensus Demand Plan
- B. Global Demand Plan
- C. Constrained Demand Plan
- D. Inventory Plan

Answer: A,D

Explanation:

SAP IBP for Sales and Operations Planning (S&OP) unifies demand, supply, and inventory processes, with key data reviewed in the S&OP cycle, per SAP IBP's S&OP documentation.
* Option A: Global Demand PlanThis is incorrect. "Global Demand Plan" is not a standard term in SAP IBP S&OP; it's typically "Consensus Demand Plan" after collaboration.
* Option B: Constrained Demand PlanThis is incorrect. Constrained demand is more relevant to supply planning or response, not the unified S&OP review process.
* Option C: Inventory PlanThis is correct. The Inventory Plan (e.g., safety stock, target inventory) is reviewed in S&OP to ensure alignment with demand and supply, a key unified process, per SAP IBP's documentation.
* Option D: Consensus Demand PlanThis is correct. The Consensus Demand Plan, finalized after S&OP collaboration, is a central data point reviewed to balance supply and inventory, per SAP IBP's S&OP workflow.
Thus, C and D are commonly reviewed in S&OP, per SAP IBP's official processes.

NEW QUESTION # 26
You need to work in two separate sessions for two different SAP IBP tenants. What can help you differentiate the appearance of their user interfaces? Note: There are 2 correct answers to this question.

- A. Set a separate theme for the Home page in the Web UI
- B. Define a different default planning area via the User Preferences
- C. Add the system name and tenant information from the About section to the Home pages
- D. Have a different set of tiles in the Home group of apps

Answer: A,D

Explanation:
SAP IBP supports multiple tenants (e.g., development, test, production), and users may need to distinguish between them when working in parallel sessions, typically via the Fiori-based Web UI. Customization of the UI is a key feature to enhance usability.
* Option A: Define a different default planning area via the User PreferencesThis is incorrect. While users can set a default planning area in their preferences, this affects functionality (e.g., which planning area loads first), not the visual appearance of the UI. It doesn't help differentiate tenants visually.
* Option B: Have a different set of tiles in the Home group of appsThis is correct. In the SAP IBP Fiori launchpad, the Home page displays app tiles (e.g., Planner Workspaces, Manage Analytics Stories). Administrators or users with appropriate roles can customize the tile layout per tenant, creating distinct sets of tiles. This visual difference helps users identify which tenant they're in, as per SAP IBP' s Fiori UI customization options.
* Option C: Set a separate theme for the Home page in the Web UIThis is correct. SAP Fiori supports theming (e.g., colors, logos) via the UI Theme Designer or tenant-specific settings. By applying a unique theme to each tenant's Web UI, users can visually distinguish them. This is a standard SAP capability leveraged in IBP to enhance user experience.
* Option D: Add the system name and tenant information from the About section to the Home pagesThis is incorrect. The "About" section provides system details (e.g., tenant ID), but there's no standard feature to dynamically display this on the Home page as a customizable UI element. Manual workarounds (e.g., custom tiles) are possible but not a native option.
Thus, B and C are practical, supported methods to differentiate tenant UIs in SAP IBP's Webinterface.

NEW QUESTION # 27
Model configuration allows the attributes of a master data type to be assigned as key figures. Which feature is relevant for this type of object?

- A. This object contains user-defined criteria that monitor the running of business plans
- B. This object usually provides a single value for a unique planning combination
- C. This type of key figure is not usually stored and it cannot be editable
- D. This type of key figure has better performance than a time-independent key figure

Answer: B

Explanation:
In SAP IBP, the "Attribute as Key Figure" feature allows master data attributes (e.g., Product Category) to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.
* Option A: This type of key figure is not usually stored and it cannot be editableThis is incorrect.
Attribute key figures are stored (sourced from master data) and can be editable if configured as such, not inherently non-editable.
* Option B: This type of key figure has better performance than a time-independent key figureThis is incorrect. Performance depends on usage, not a guaranteed advantage over other time-independent key figures.

* Option C: This object usually provides a single value for a unique planning combinationThis is correct. An attribute key figure (e.g., Product Price) provides one static value per planning combination (e.g., PERPROD), a defining feature, per SAP IBP's configuration guides.
* Option D: This object contains user-defined criteria that monitor the running of business plans This is incorrect. This describes alerts or KPIs, not attribute key figures.
Thus, C is the relevant feature, per SAP IBP's official definition.

NEW QUESTION # 28

You are reviewing the master data types that are often used for supply and inventory planning. Which master data types are compound master data types? Note: There are 2 correct answers to this question.

* A. SOURCECUSTOMER
* B. SOURCEPRODUCTION
* C. SOURCELOCATION
* D. SOURCECUSTGROUP

Answer: A,C

Explanation:
In SAP IBP, master data types are classified as simple (standalone) or compound (combining multiple simple types). Compound master data types link related entities (e.g., source and target) and are critical for supply and inventory planning to define relationships.
* Option A: SOURCEPRODUCTIONThis is incorrect. SOURCEPRODUCTION is not a standard compound master data type in SAP IBP. Production relationships are modeled via Production Source of Supply (e.g., Production Source Header/Item), not a compound type named SOURCEPRODUCTION.
* Option B: SOURCECUSTOMERThis is correct. SOURCECUSTOMER is a compound master data type combining Source ID (e.g., Location or Product) and Customer ID. It defines sourcing relationships (e.g., which customers are served from which sources) and is used in supply and inventory planning to allocate demand.
* Option C: SOURCELOCATIONThis is correct. SOURCELOCATION is a compound master data type linking Source Location and Target Location (e.g., via Transportation Lane). It's essential for modeling supply chain networks in inventory and supply planning.
* Option D: SOURCECUSTGROUPThis is incorrect. There's no standard compound master data type called SOURCECUSTGROUP in SAP IBP. Customer groups might be attributes, but they don't form a compound type.
Thus, B and C (SOURCECUSTOMER, SOURCELOCATION) are compound master data types in SAP IBP, as per official master data configuration documentation.

NEW QUESTION # 29

What are some of the key capabilities of SAP Integrated Business Planning for demand? Note: There are 3 correct answers to this question.

* A. Determination of coefficient of variation (CV)
* B. Classifying demand into zones
* C. Statistical analysis using the predictive analytics tools
* D. Embedded, on-the-fly demand analytics
* E. Automated, exception-based processing

Answer: A,D,E

Explanation:
SAP IBP for Demand enhances demand planning with advanced features, per SAP IBP's demand module documentation.
* Option A: Automated, exception-based processingThis is correct. Automated forecasting with exception handling (e.g., alerts for outliers) is a core capability, per SAP IBP's demand planning features.
* Option B: Statistical analysis using the predictive analytics toolsThis is incorrect. Predictive analytics (e.g., machine learning) is available via SAP HANA integration, not a native IBP Demand tool.
* Option C: Determination of coefficient of variation (CV)This is correct. CV (variability measure) is calculated in ABC/XYZ segmentation and demand analysis, a standard feature, per SAP IBP's documentation.
* Option D: Classifying demand into zonesThis is incorrect. "Zones" is not a standard demand classification in SAP IBP; ABC/XYZ segmentation is used instead.
* Option E: Embedded, on-the-fly demand analyticsThis is correct. Real-time analytics (e.g., in Excel or Planner Workspaces)

provide instant demand insights, per SAP IBP's demand capabilities.

Thus, A, C, and E are key capabilities, per SAP IBP's official demand planning scope.

NEW QUESTION # 30

......

If you still worry too much about purchasing professional C_IBP_2502 test guide on the internet, I can tell that it is quite normal. Useful certification C_IBP_2502 guide materials will help your preparing half work with double results. If you consider about our C_IBP_2502 exam questoins quality, you can free downlaod the demo of our C_IBP_2502 Exam Questions. We have thought of your needs and doubts considerately on the C_IBP_2502 study guide. Our certification C_IBP_2502 guide materials are collected and compiled by experience experts who have worked in this line more than 10 years.

C_IBP_2502 Pdf Braindumps: https://www.actualcollection.com/C_IBP_2502-exam-questions.html

Both of the content and the displays are skillfully design on the purpose that C_IBP_2502 actual exam can make your learning more targeted and efficient, For later review, our Test Engine provides an option to save SAP Certified C_IBP_2502 ActualCollection exam notes, If you really want to get an international certificate, C_IBP_2502 training quiz is really your best choice, SAP C_IBP_2502 Latest Test Report Please submit a support ticket if you are having activation problems and provide as much information as you can so that we can assist you quickly.

Start small and build up, David Chisnall: There C_IBP_2502 Valid Braindumps Book are lots of rumours about what will be announced at the keynote this year, Both of the content and the displays are skillfully design on the purpose that C_IBP_2502 Actual Exam can make your learning more targeted and efficient.
