Useful CCFA-200b – 100% Free Practice Questions | CCFA-200b Study Guides

After the client pay successfully they could receive the mails about CCFA-200b guide questions our system sends by which you can download our test bank and use our study CCFA-200b STUDY materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the CCFA-200b Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our product satisfies the client's needs to download and use our CCFA-200b practice engine immediately.

CrowdStrike Falcon Administrator Sample Questions (Q176-Q181):

NEW QUESTION # 176

Assume the Falcon Sensor was installed on a Virtual Machine template using the installation parameter NO_START=1. Afterward, the Virtual Machine template is rebooted. What is the effect on the Falcon Sensor after reboot?

- A. The Falcon Sensor would not automatically start on reboot. It would have to be manually started
- B. The Falcon Sensor would start at reboot and generate an Agent ID.
- C. The Falcon Sensor would disable BIOS checks at startup
- D. The Falcon Sensor would start, but only send a heartbeat to the Falcon console

Answer: A

NEW QUESTION # 177

The Falcon sensor uses certificate pinning to defend against man-in-the-middle attacks. Which statement is TRUE concerning Falcon sensor certificate validation?

- A. Common sources of interference with certificate pinning include protocol race conditions and resource contention
- B. SSL inspection should be configured to occur on all Falcon traffic
- C. HTTPS interception should be enabled to proceed with certificate validation
- **D. Some network configurations, such as deep packet inspection, interfere with certificate validation**

Answer: D

Explanation:

The statement that some network configurations, such as deep packet inspection, interfere with certificate validation is true concerning Falcon sensor certificate validation. The Falcon sensor uses certificate pinning to defend against man-in-the-middle attacks, which means that it verifies that the server certificate presented by the Falcon cloud matches a hard-coded certificate embedded in the sensor. Some network configurations, such as deep packet inspection, SSL inspection, or HTTPS interception, may attempt to modify or replace the server certificate, which will cause the sensor to reject the connection and generate an error.

NEW QUESTION # 178

When creating new IOCs in IOC management, which of the following fields must be configured?

- A. Hash, Description, Filename
- **B. Hash, Platform and Action**
- C. Hash, Action and Expiry Date
- D. Filename, Severity and Expiry Date

Answer: B

Explanation:

When creating new IOCs in IOC management, the administrator must configure the Hash, Platform and Action fields. The Hash field is the value of the IOC, such as MD5, SHA1 or SHA256. The Platform field is the operating system that the IOC applies to, such as Windows, Linux or Mac. The Action field is the action that Falcon will take when detecting the IOC, such as Detect, Block or Allow. The other fields are either optional or not available.

NEW QUESTION # 179

Which of the following options is a feature found ONLY with the Sensor-based Machine Learning (ML)?

- A. Adware and Potentially Unwanted Program detection and prevention
- **B. Identification and analysis of unknown executables**
- C. Next-Gen Antivirus (NGAV) protection
- D. Real-time offline protection

Answer: B

Explanation:

According to documentation (documentation/detections/technique/sensor-based-ml-cst0007):

CrowdStrike sensor-based machine learning (ML) identifies and analyzes unknown executables as they run on hosts. This technique is triggered by files and file attributes associated with known malware. This is similar to the [Cloud-based ML] (/support/documentation/detections/technique/cloud-based-ml) technique. Cloud-based ML is informed by global analysis of executables that classifies and identifies malware. The key difference is that it doesn't run on hosts when they're offline.

NEW QUESTION # 180

How can a Falcon Administrator configure a pop-up message to be displayed on a host when the Falcon sensor blocks, kills or quarantines an activity?

- A. By selecting "Enable pop-up messages" from the User configuration page
- **B. By turning on the "Notify End Users" setting at the top of the Prevention policy details configuration page**
- C. By enabling "Upload quarantined files" in the General Settings configuration page

- D. By ensuring each user has set the "pop-ups allowed" in their User Profile configuration page

Answer: B

Explanation:

A Falcon Administrator can configure a pop-up message to be displayed on a host when the Falcon sensor blocks, kills or quarantines an activity by turning on the "Notify End Users" setting at the top of the Prevention policy details configuration page. This setting allows users to enable or disable end user notifications for prevention actions taken by Falcon on Windows hosts. The other options are either incorrect or not related to configuring pop-up messages.

NEW QUESTION # 181

.....

Our CrowdStrike dumps files contain the latest CCFA-200b practice questions with detailed answers and explanations, which written by our professional trainers and experts. And we check the updating of CCFA-200b exam pdf everyday to make sure the accuracy of our questions. There are demo of CCFA-200b free vce for you download in our exam page. One week preparation prior to attend exam is highly recommended.
