CompTIA N10-009 Training Solutions, N10-009 Reliable Test Cost

Getting the CompTIA Network+ Certification Exam (N10-009) certification is the way to go if you're planning to get into CompTIA or want to start earning money quickly. Success in the CompTIA Network+ Certification Exam (N10-009) exam of this credential plays an essential role in the validation of your skills so that you can crack an interview or get a promotion in an CompTIA company.

Many people are attempting the CompTIA Network+ Certification Exam (N10-009) test nowadays because its importance is growing rapidly.

CompTIA N10-009 Exam Syllabus Topics:

Topic	Details
Topic 1	Networking Concepts: For network administrators and IT support professionals, this domain covers
Topic 2	Network Implementation: For network technicians and junior network engineers, this section covers Characteristics of routing technologies, Configuration of switching technologies and features, and
Topic 3	Network Operations: For IT operations staff and network operations center (NOC) technicians, this part of the exam covers the purpose of organizational processes and procedures and use of network monitoring technologies.
Topic 4	Network Security: This section of the exam for cybersecurity specialists and network security administrators covers the importance of basic network security concepts, Various types of attacks and their impact on the network, application of network security features, defense techniques, and solutions. Network Troubleshooting: For help desk technicians and network support specialists, this section covers troubleshooting methodology, troubleshooting common cabling and physical interface issues, troubleshooting common issues with network services, and use of appropriate tools or protocols to solve networking issues.
Topic 5	OSI reference model concepts, Comparison of networking appliances, applications, and functions
Topic 6	Cloud concepts and connectivity options, and Common networking ports.

CompTIA Network+ Certification Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

If a switch has port security enabled and a new device with a different MAC address is connected, what will happen?

- A. MAC address of the new card
- B. PoE power budget
- C. Link aggregation settings
- D. BPDU guard settings

Answer: A

Explanation:

If a switch has port security enabled (such as sticky MAC or a configured allowed MAC), the port will only allow the original NIC's MAC address. When a new NIC with a different MAC address is installed, the port rejects traffic, preventing network connectivity.

* B. BPDU guard protects against rogue switches, not end hosts.

* C. Link aggregation applies when bundling multiple uplinks, not a single PC connection.

* D. PoE budget applies to powered devices like APs, not PCs.

NEW QUESTION # 39

A network technician is troubleshooting the connection to the company website. The traceroute command produces the following output:

Traceroute to www.mysite.com (8.8.8.8) over a maximum of 30 hops

0 10.1.1.1 <1 ms 2. * <1 ms <1 ms

k k

k k Traceroute complete Which of the following should the technician do to identify the path to the server?

- A. Enable LLDP.

- B. Perform an nslookup.
- C. Execute netstat.
- D. Review the router's ACL.

Answer: B

Explanation:

When traceroute shows asterisks (timeouts) instead of IP addresses or hostnames, it may indicate that intermediate routers are dropping ICMP packets. However, performing an nslookup will reveal the IP address associated with the domain name, confirming that DNS resolution is correct and helping identify the path to the target server. The document states:

"nslookup is used to query DNS servers to retrieve IP address information associated with a domain name, which helps confirm DNS resolution is working correctly even when traceroute results show timeouts."

NEW QUESTION # 40

A user called the help desk after business hours to complain that files on a device are inaccessible and the wallpaper was changed. The network administrator thinks that this issue is an isolated incident, but the security analyst thinks the issue might be a ransomware attack. Which of the following troubleshooting steps should be taken first?

- A. Identify the problem
- B. Establish a theory
- C. Document findings
- D. Create a plan of action

Answer: A

Explanation:

The first step in any troubleshooting process is to identify the problem. This includes gathering information from the user, reviewing logs, and observing the symptoms. In this case, identifying the scope and nature of the issue (e.g., signs of ransomware) is critical before forming any theories or plans.

From Andrew Ramdayal's guide:

"The troubleshooting methodology begins with identifying the problem. This step involves questioning users, identifying user changes, and determining the symptoms."

NEW QUESTION # 41

Which protocol typically uses TCP port 443?

- A. SNMP
- B. Telnet
- C. SMTP
- D. HTTPS

Answer: D

Explanation:

TCP port 443 is reserved for HTTPS (Hypertext Transfer Protocol Secure), which uses TLS encryption to secure web traffic. It is the standard port for encrypted web communications.

* A. Telnet uses TCP port 23.

* B. SMTP commonly uses TCP ports 25, 465, or 587.

* D. SNMP typically uses UDP ports 161 (queries) and 162 (traps).

NEW QUESTION # 42

A network administrator configured a router interface as 10.0.0.95 255.255.255.240. The administrator discovers that the router is not routing packets to a web server with IP 10.0.0.81/28. Which of the following is the best explanation?

- A. The IP address space is a class A network.
- B. The web server is in a different subnet.

- C. The subnet is in a private address space.
- D. The router interface is a broadcast address.

Answer: D

Explanation:

- * Understanding Subnetting:
- * The subnet mask 255.255.255.240 (or /28) indicates that each subnet has 16 IP addresses (14 usable addresses, 1 network address, and 1 broadcast address).
- * Calculating the Subnet Range:
- * Subnet Calculation: For the IP address 10.0.0.95 with a /28 subnet mask:
- * Network address: 10.0.0.80
- * Usable IP range: 10.0.0.81 to 10.0.0.94
- * Broadcast address: 10.0.0.95
- * Router Interface Configuration:
- * Broadcast Address Issue: The IP address 10.0.0.95 is the broadcast address for the subnet 10.0.0.80/28. Configuring a router interface with the broadcast address will cause routing issues as it is not a valid host address.
- * Comparison with Other Options:
- * The web server is in a different subnet: The web server (10.0.0.81) is within the same subnet range (10.0.0.80/28).
- * The IP address space is a class A network: While 10.0.0.0 is a Class A network, this does not explain the routing issue caused by the broadcast address.
- * The subnet is in a private address space: The private address space designation (RFC 1918) does not impact the routing issue related to the broadcast address configuration.
- * Resolution:
- * Reconfigure the router interface with a valid host IP address within the usable range, such as 10.0.0.94.

NEW QUESTION # 43

Improvement in N10-009 science and technology creates unassailable power in the future construction and progress of society. As we can see, the rapid progression of the whole world is pushing people forward and the competitiveness among people who are fighting on the first line is growing intensely. N10-009 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our N10-009 Training Materials have become the most widely-lauded and much-anticipated products in industry. We will look to build up R&D capacity by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing N10-009 practice test.
