# VMware vSphere 8.x Advanced Design Sample Questions (Q71-Q76):

**NEW QUESTION # 71**
Which four factors should an architect consider when calculating the number of hosts required for a new multi-site vSphere-based solution that utilizes external storage? (Choose four.)

- A. The future physical location of any workloads
- B. The hardware specification of the underlying infrastructure
- C. The workload profile (CPU and memory) of each workload
- D. The amount of resources required for virtual machine (VM) swap and VM snapshots
- E. The number of existinq workloads that will be miqrated onto the new solution
- F. The number of existinq workloads that will be decommissioned prior to the completion of project
- G. The number of network connections per physical host server

**Answer: A,C,E,F**

**NEW QUESTION # 72**
During a requirements gathering workshop, the customer provides the following requirement (REQ) and constraints (CON):
- REQ01: The customer is looking for a way to limit database virtual machine (VM) placement to save on CPU licensing costs.
- CON01: There is a single cluster with no budget to scale.
- CON02: All virtual machines must run on the consolidated cluster.
Which two design decisions should the architect make to meet the customer requirement? (Choose two.)

- A. The solution must use VM-VM anti-affinity rules
- B. The solution must use VM-Host affinity rules
- C. The solution must use vSphere DRS in manual mode
- D. The solution must use vSphere VM and host DRS groups
- E. The solution must use a vRealize Orchestrator workflow for VM placement

**Answer: B,D**

**NEW QUESTION # 73**
What is the primary function of vCenter Server in a vSphere environment?

- A. To manage and monitor virtual machines and ESXi hosts
- B. To provide licensing for vSphere products
- C. To manage and secure the physical network infrastructure
- D. To provide a platform for virtual machine storage

**Answer: A**

**NEW QUESTION # 74**
What is a use case for a VMware Cloud Foundation consolidated architecture model?

- A. Deploy a large-scale environment with multiple vCenter instances for workload isolation.
- B. Implement a dedicated management domain for high availability of management workloads.
- C. Run customer workloads in separate virtual infrastructure workload domains for scalability and autonomous licensing.
- D. Deploy an SDDC for a small-scale environment that can be extended later.

**Answer: D**

Explanation:
The VMware Cloud Foundation consolidated architecture model is designed to support small-scale environments with the ability to scale as needed. In this model, management and workload domains are deployed on the same hardware, which is suitable for environments that start small but may need to expand later. It provides a simplified, cost-effective setup for organizations that want to implement a software-defined data center (SDDC) with flexibility to grow in the future.

**NEW QUESTION # 75**

An architect is designing a new vSphere-based solution for a customer.

During a requirements gathering workshop, the following information is provided:

0The solution must have a primary and secondary (isolated) environment

The solution must support orchestration to address application dependencies The isolated environment must be able to scale on demand in case of a DR scenario The solution is managed through a single interface Which solution should the architect include in this design?

- A. A dedicated fault domain
- B. Disaster Recovery with VMware Cloud on AWS
- C. Site Recovery Manager with dedicated hardware
- D. vSAN stretched cluster

**Answer: B**

Explanation:

This solution aligns with the requirements of having a primary and secondary isolated environment, orchestration of application dependencies, the ability to scale on demand in a disaster recovery (DR) scenario, and a single interface for management. VMware Cloud on AWS integrates with VMware's vSphere environment and offers orchestration for DR, as well as the flexibility to scale resources on demand in the event of a DR scenario. It also provides a unified management interface through vCenter.
