

Receive free updates for the Microsoft GH-200 Exam Dumps

Our GH-200 exam questions boost 3 versions: PDF version, PC version, APP online version. You can choose the most suitable method to learn. Each version boosts different characteristics and different using methods. For example, the APP online version of GH-200 guide torrent is used and designed based on the web browser and you can use it on any equipment with the browser. It boosts the functions of exam simulation, time-limited exam and correcting the mistakes. There are no limits for the amount of the using persons and equipment at the same time. The PDF version of our GH-200 Guide Torrent is convenient for download and printing. It is simple and suitable for browsing learning and can be printed on papers to be convenient for you to take notes. Before you purchase our GH-200 test torrent please visit the pages of our product on the websites and carefully understand the product and choose the most suitable version of GH-200 exam questions.

Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.
Topic 2	• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.

Topic 3	• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.
Topic 4	• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.

100% Pass Microsoft GH-200 - Fantastic GitHub Actions Reliable Exam Topics

Most of our clients found our GH-200 exam questions and answers amazing. All they learned from DumpsTorrent is that the Microsoft GH-200 practice test questions were accurately similar to the actual questions they faced on their GitHub Actions exam. It made them utterly confident to go through the whole process of the GitHub Actions. Feel free to compare our quality of Microsoft GH-200 Exam Questions dumps with other courses. Nothing can help people pass their Microsoft GH-200 certification exam more than we do. Even people who were on their first time taking Microsoft Target GH-200 certification can pass their GitHub Actions exam with DumpsTorrent's help.

Microsoft GitHub Actions Sample Questions (Q93-Q98):

NEW QUESTION # 93

What menu options in a repository do you need to select in order to use a starter workflow that is provided by your organization?

- A. Actions > New workflow
- B. Workflow > Load workflow
- C. Actions > Load workflow
- D. Workflow > New workflow

Answer: A

Explanation:

To use a starter workflow provided by your organization, you need to go to the Actions tab in the repository and select New workflow. This option allows you to either create a new workflow or select from a list of available workflow templates, including starter workflows provided by your organization.

NEW QUESTION # 94

Which of the following scenarios requires a developer to explicitly use the GITHUB_TOKEN or github.token secret within a workflow? (Choose two.)

- A. making an authenticated GitHub API request
- B. passing the GITHUB_TOKEN secret to an action that requires a token as an input
- C. checking out source code with the actions/checkout@v3 action
- D. assigning non-default permissions to the GITHUB_TOKEN

Answer: A,B

Explanation:

Some actions may require a GITHUB_TOKEN as an input to authenticate and perform specific tasks, such as creating issues,

commenting on pull requests, or interacting with the GitHub API. In such cases, you would need to explicitly pass the token to the action.

When making an authenticated GitHub API request, the GITHUB_TOKEN is required to authenticate the request. This token is automatically provided by GitHub in the workflow, and it must be explicitly used when interacting with the GitHub API.

NEW QUESTION # 95

Which step is using the dbserver environment variable correctly?

- A. steps:
- name: Hello world
run: echo \$dbserver
environment:
dbserver: orgserver1
- B. steps:
- name: Hello world
run: echo \$dbserver
env:
dbserver: orgserver1
- C. steps:
- name: Hello world
run: echo \$dbserver
variables:
dbserver: orgserver1
- D. steps:
- name: Hello world
run: echo \$dbserver
env:
- name: dbserver
value: orgserver1

Answer: B

Explanation:

Store information in variables

GitHub sets default variables for each GitHub Actions workflow run. You can also set custom variables for use in a single workflow or multiple workflows.

Defining environment variables for a single workflow

To set a custom environment variable for a single workflow, you can define it using the env key in the workflow file. The scope of a custom variable set by this method is limited to the element in which it is defined. You can define variables that are scoped for:

The entire workflow, by using env at the top level of the workflow file.

The contents of a job within a workflow, by using jobs.<job_id>.env.

A specific step within a job, by using jobs.<job_id>.steps[*].env.

NEW QUESTION # 96

As a developer, you need to make sure that only actions from trusted sources are available for use in your GitHub Enterprise Cloud organization. Which of the following statements are true?

(Each correct answer presents a complete solution. Choose three.)

- A. Actions can be restricted to only those available in the enterprise.
- B. GitHub-verified actions can be collectively enabled for use in the enterprise.
- C. Actions created by GitHub are automatically enabled and cannot be disabled.
- D. Specific actions can individually be enabled for the organization, including version information.
- E. Individual third-party actions enabled with a specific tag will prevent updated versions of the action from introducing vulnerabilities.
- F. Actions can be published to an internal marketplace.

Answer: B,D,F

Explanation:

[A] Internal Actions Marketplace

The reason for having an internal actions marketplace is to have a central location for all the actions that can be used inside our production organization. This is to prevent any actions from the public marketplace from being used in our production organization, without being checked for security risks first.

[B] Allow Marketplace actions by verified creators: You can allow all GitHub Marketplace actions created by verified creators to be used by workflows. When GitHub has verified the creator of the action as a partner organization, the badge is displayed next to the action in GitHub Marketplace.

[C] You can enable specific actions for the organization by identifying them and providing version control, ensuring only trusted versions are used in workflows.

NEW QUESTION # 97

As a developer, which of the following snippets will enable you to run the commands `npm ci` and `npm run build` as part of a workflow?

- A. - run:
 `npm ci`
 `npm run build`
- B. - shell: |
 `npm ci`
 `npm run build`
- C. - shell:
 `npm ci`
 `npm run build`
- D. - run: |
 `npm ci`
 `npm run build`
 `shell: nodejs`
- E. - run: |
 `npm ci`
 `npm run build`

Answer: E

Explanation:

Use the `run:` keyword only, not the `shell` keyword.

Use the special character `|`.

Note: There are two ways to run commands one after another on Github Actions.
