

Relevant JN0-481 Exam Dumps - Pass4sure JN0-481 Exam Prep

BTW, DOWNLOAD part of Prep4sureExam JN0-481 dumps from Cloud Storage: <https://drive.google.com/open?id=1ZYc-BczqzilqlhC8Ww0j8dBLXTfGC96L>

Our JN0-481 preparation materials are global products that have been tested by users worldwide. You can be absolutely assured about the quality of our JN0-481 training quiz. And you can just take a look at the hot hit about our JN0-481 Exam Questions, you will know how popular and famous they are. And the pass rate of our JN0-481 learning braindumps is high as 98% to 100%, this data is also proved that our excellent quality.

Our Prep4sureExam JN0-481 exam certification training materials are real with a reasonable price. After you choose our JN0-481 exam dumps, we will also provide one year free renewal service. Before you buy Prep4sureExam JN0-481 certification training materials, you can download JN0-481 free demo and answers on probation. If you fail the JN0-481 exam certification or there are any quality problem of JN0-481 exam certification training materials, we guarantee that we will give a full refund immediately.

Pass4sure JN0-481 Exam Prep - Latest JN0-481 Exam Cram

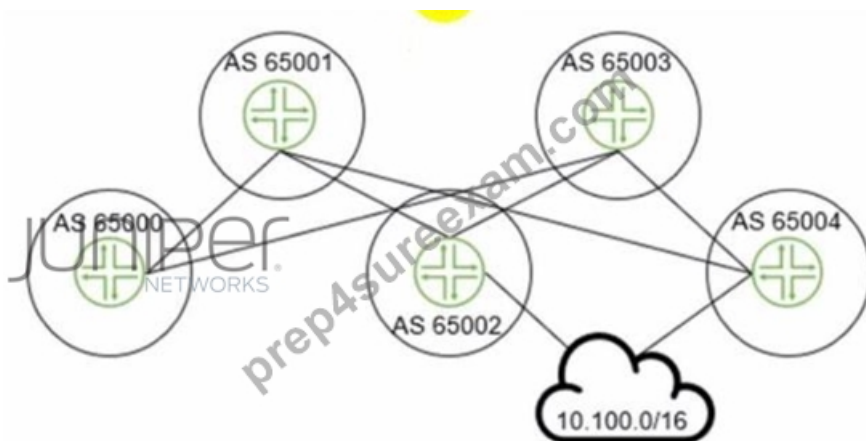

In a new era of talent gradually saturated win their own advantages, how to reflect your ability? Perhaps the most intuitive way is to get the test JN0-481 certification to obtain the corresponding qualifications. However, the JN0-481 qualification examination is not so simple and requires a lot of effort to review. How to get the test certification effectively, I will introduce you to a product—the JN0-481 Learning Materials that tells you that passing the JN0-481 exam in a short time is not a fantasy. We have helped tens of thousands of candidates pass their JN0-481 exam with 99% pass rate.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q13-Q18):

NEW QUESTION # 13

The 10.100.0.0/16 route is being advertised into your BGP IP fabric. ECMP load balancing has been properly enabled on all devices.

In this scenario, how many routes will the leaf device in AS 65000 receive for the 10.100.0.0/16 prefix?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The leaf device in AS 65000 will receive three routes for the 10.100.0.0/16 prefix, one from each spine device in AS 65001, AS 65002, and AS 65003. Since ECMP load balancing is enabled, the leaf device will install all three routes in its routing table and distribute the traffic among them.

NEW QUESTION # 14

Referring to the exhibit, how do you display the IPv6 subnets for all of the listed VXLANs?

Name	Routing Zone	Type	VNI ID	Assigned to	DHCP Service	IPv4 Connectivity	IPv4 Subnet	Actions
0 selected								
vlan_30_leaf3_v4	default	VLAN	30	1 nodes	Enabled	Enabled	10.1.3.0/24	
red_vxlan_42_v4_one_ep_mlag	red	VXLAN	30011	2 nodes	Enabled	Enabled	10.1.15.0/24	
red_vxlan_41_v4_one_ep	red	VXLAN	30010	3 nodes	Enabled	Enabled	10.1.14.0/24	

- A. IPv6 subnets are shown when each VXLAN is selected individually.
- B. Select all VXLANs, and the IPv6 Subnets column will appear
- C. An IPv6 Subnets column is not shown, indicating that no VXLAN has an assigned IPv6 subnet
- D. Select Columns, then select IPv6 Subnet.

Answer: D

Explanation:

Referring to the exhibit, the image shows a user interface of the Juniper Apstra software application, which is used for network management and configuration. The image shows the Virtual Networks table under the Resources menu, which displays the details of the VLANs and VXLANs in the network. The table has 11 columns, but only 9 are visible in the image. The other two columns are IPv6 Connectivity and IPv6 Subnet, which are hidden by default. To display the IPv6 subnets for all of the listed VXLANs, the user needs to select Columns, then select IPv6 Subnet. This will show the IPv6 Subnet column in the table, which will display the

IPv6 addresses assigned to the VXLANs from the IPv6 pools. For more information, see Virtual Networks (Resources).

NEW QUESTION # 15

Which fabric type should be chosen in a template to create a five-stage Clos?

- A. rack-based
- B. circuit switched
- C. pod-based
- D. collapsed

Answer: C

Explanation:

A five-stage Clos architecture allows for large-scale topologies with an additional aggregation layer that interconnects multiple pods into a single fabric. A pod is a group of racks that share the same spine devices. A rack is a group of leaf devices that connect to the same servers. To create a five-stage Clos network using Juniper Apstra, you need to choose the pod-based fabric type in the template creation wizard. This will allow you to specify the number of pods, planes, spines, and leaves for your network design.

NEW QUESTION # 16

You have recently committed a change after creating a new blueprint in Juniper Apstra. In the main dashboard, you see a number of anomalies related to BGP. What is a likely cause of these anomalies?

- A. You have misconfigured ASNs.
- B. The fabric has not converged yet.
- C. Spine-leaf links are incorrectly set.
- D. A generic system has not been configured.

Answer: B

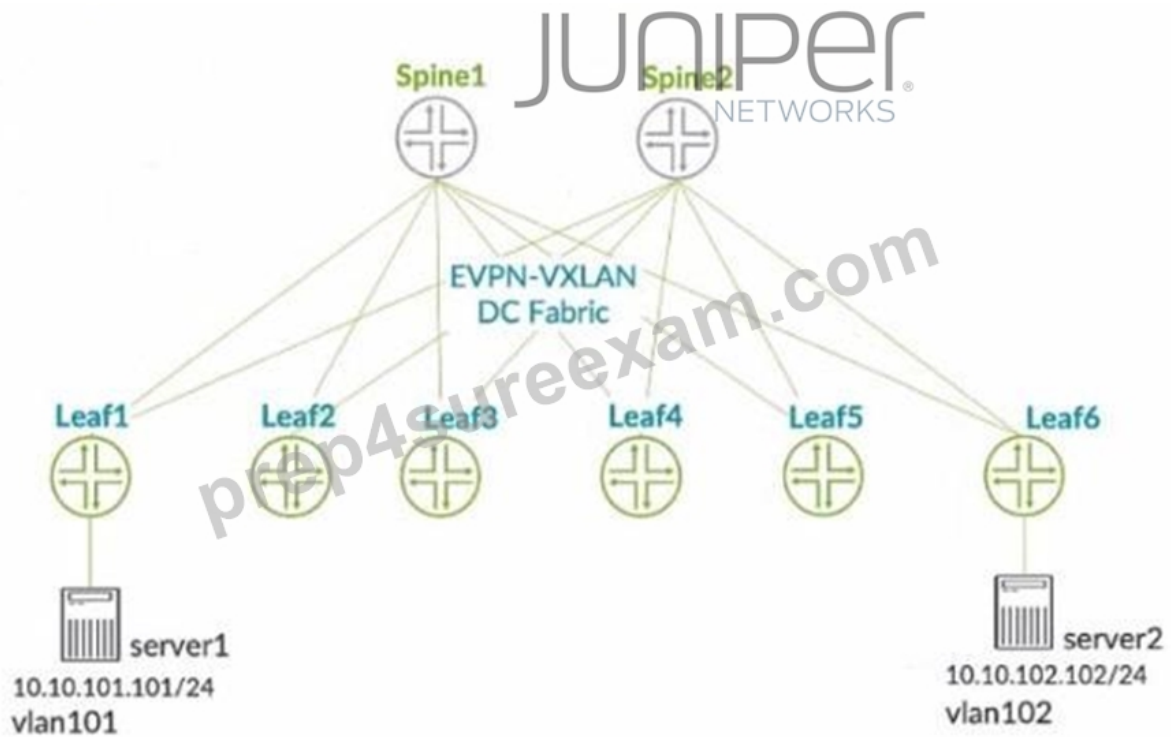

Explanation:

In Juniper Apstra, a blueprint is a logical representation of the network design and configuration.

When you create a new blueprint, you need to commit the changes to apply them to the network devices. However, committing the changes does not mean that the network is immediately updated and operational. It may take some time for the network to converge and reflect the new state of the blueprint. During this time, you may see some anomalies related to BGP in the main dashboard, which indicate that the BGP sessions are not established or stable between the devices. These anomalies are usually temporary and will disappear once the network converges and the BGP sessions are up and running.

NEW QUESTION # 17

You connect two single-homed servers using Juniper Apstra as shown in the exhibit. You are using the ERB design blueprint with two virtual networks in a common routing zone. In this scenario, which two types of VXLAN tunnels will be automatically created by the EVPN control plane? (Choose two.)

- A. EVPN signaled route Type-8 VXLAN tunnels
- B. EVPN signaled route Type-6 VXLAN tunnels
- C. EVPN signaled route Type-3 VXLAN tunnels
- D. EVPN signaled route Type-2 VXLAN tunnels

Answer: C,D

Explanation:

EVPN route Type-3 is used to advertise the IP address of the VTEP and the VNIs that it supports.

This allows the VTEPs to discover each other and form VXLAN tunnels for the VNIs that they have in common. EVPN route Type-2 is used to advertise the MAC and IP addresses of the hosts connected to the VTEPs. This allows the VTEPs to learn the MAC-to-IP bindings and the MAC-to-VTEP mappings for the hosts in the same VNI. Therefore, these two types of VXLAN tunnels will be automatically created by the EVPN control plane when using Juniper Apstra with the ERB design blueprint and two virtual networks in a common routing zone.

NEW QUESTION # 18

.....

To fit in this amazing and highly accepted exam, you must prepare for it with high-rank practice materials like our JN0-481 study materials. Our JN0-481 exam questions are the Best choice in terms of time and money. If you are a beginner, start with the learning guide of JN0-481 Practice Engine and our products will correct your learning problems with the help of the JN0-481 training braindumps.
