Reliable 1Z0-1072-25 Dumps Free | Latest 1Z0-1072-25 Exam Topics

Our company according to the situation reform on conception, question types, designers training and so on. Our latest 1Z0-1072-25 exam torrent was designed by many experts and professors. You will have the chance to learn about the demo for if you decide to use our 1Z0-1072-25 quiz prep. We can sure that it is very significant for you to be aware of the different text types and how best to approach them by demo. At the same time, our 1Z0-1072-25 Quiz torrent has summarized some features and rules of the cloze test to help customers successfully pass their exams.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.
Topic 2	• Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
Topic 3	• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources
Topic 4	• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.

Oracle 1Z0-1072-25 Actual Exam Dumps Materials are the best simulate product - ITExamDownload

Looking for top-notch Implementing and Operating Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam questions? You've come to the right place! ITExamDownload offers a comprehensive and affordable solution for all your 1Z0-1072-25 exam needs. Our 1Z0-1072-25 Exam Questions are regularly updated, and we provide a range of attractive features to enhance your preparation, including PDF format, an online practice test engine.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q18-Q23):

NEW QUESTION # 18
What is the primary function of the Network Path Analyzer (NPA) tool provided by Oracle Cloud Infrastructure (OCI)?

- A. Providing real-time monitoring of network traffic to detect security threats and unauthorized access attempts
- B. Collecting and analyzing network configuration to identify virtual network configuration issues impacting connectivity
- C. Sending actual traffic between source and destination to diagnose connectivity issues
- D. Optimizing network performance by dynamically adjusting routing paths based on traffic patterns

Answer: B

Explanation:
The primary function of the Network Path Analyzer (NPA) tool in Oracle Cloud Infrastructure (OCI) is to help users troubleshoot and diagnose network connectivity issues by analyzing the network path between a source and a destination within OCI. The tool collects and analyzes the configuration of the virtual network, identifying any misconfigurations or issues that might impact connectivity.
NPA Usage: The Network Path Analyzer allows administrators to trace the network path and check for issues such as incorrect security list rules, route table misconfigurations, or any other factors that could prevent network traffic from reaching its destination.
Reference:
Oracle Cloud Infrastructure Documentation: Network Path Analyzer

NEW QUESTION # 19
How would you allow access to FSS for a DB System with read-only permissions?

- A. Create an instance principal for the DB System.
- B. Create an NFS export option that allows READ_ONLY access.
- C. Modify the security list to allow stateless ingress rules.
- D. Modify the security list to allow stateful ingress rules.

Answer: B

Explanation:
To allow access to Oracle Cloud Infrastructure (OCI) File Storage Service (FSS) for a Database (DB) System with read-only permissions, you should create an NFS export option that specifies READ_ONLY access.
NFS Export Options: These options define the access permissions (read/write or read-only) for clients connecting to the file system. By setting the export option to READ_ONLY, you ensure that the DB System can only read from the FSS and cannot modify or delete files.
Reference:
Oracle Cloud Infrastructure Documentation: File Storage Service Export Options

NEW QUESTION # 20
Which statement is true about File System Replication in Oracle Cloud Infrastructure (OCI)?

- A. You cannot specify a replication interval when you create the replication resource.
- B. You can replicate the data in one file system to another file system only in the same region.
- C. Only a file system that has been exported can be used as a target file system.
- D. You can replicate the data in one file system to another file system in the same region or a different region.

Answer: D

Explanation:
File System Replication in Oracle Cloud Infrastructure (OCI) allows you to replicate data from one file system to another either within the same region or across different regions. This capability is particularly useful for disaster recovery, data protection, and global data distribution scenarios.
Cross-Region Replication: The replication feature enables you to create a copy of your file system in a different region, ensuring that your data is available even in the event of a regional failure.
Same-Region Replication: You also have the option to replicate data within the same region, which can be useful for scenarios such as high availability and local backups.
Reference:
Oracle Cloud Infrastructure Documentation: File System Replication

NEW QUESTION # 21
Which is NOT a necessary step to complete this setup for instance principals?

- A. Generate Auth Tokens to enable instances in the dynamic group to authenticate with APIs.
- B. Create a policy granting permissions to the dynamic group to access services in your compartment or tenancy.
- C. Create a dynamic group with matching rules to specify which instances can make API calls against services.
- D. Deploy the application and the SDK to all the instances that belong to the dynamic group.

Answer: A

Explanation:
Instance principals in OCI allow compute instances to directly make API calls against OCI services without requiring a user account.
To set up instance principals, the following steps are necessary:
A . Deploy the application and SDK: The application running on the instances must use the OCI SDK or CLI to make API calls.
B . Create a dynamic group: Define a dynamic group with matching rules to identify which instances can use the API permissions.
C . Create a policy: Write an IAM policy that grants the dynamic group the necessary permissions to access services.
Option D is NOT necessary because instances in a dynamic group use instance principals to authenticate and do not require Auth Tokens, which are used for user authentication with APIs.
Reference:
Oracle Cloud Infrastructure Documentation: Using Instance Principals

NEW QUESTION # 22
Which statement is NOT true about the Oracle Cloud Infrastructure (OCI) Object Storage service?

- A. Object Versioning is enabled at the namespace level.
- B. Immutable option for data stored in Object Storage can be set via retention rules.
- C. Object Storage resources can be shared across tenancies.
- D. Object lifecycle rules can be used to archive or delete objects.

Answer: C

Explanation:
Oracle Cloud Infrastructure (OCI) Object Storage is a scalable, highly durable service that allows you to store any type of data in a secure and cost-effective manner. The correct and incorrect statements regarding OCI Object Storage are as follows:
A . Immutable Option: You can indeed set an immutable option for data in Object Storage using retention rules. This feature ensures that once data is written, it cannot be modified or deleted until the retention period expires, making it ideal for regulatory compliance.
C . Object Lifecycle Rules: Object lifecycle policies allow you to automate the archiving or deletion of objects based on their age or other criteria, helping manage storage costs and data retention efficiently.
D . Object Versioning: Versioning is enabled at the bucket level, not the namespace level. However, once enabled for a bucket, it helps retain, retrieve, and restore every version of every object stored in that bucket.
B . Object Storage Sharing Across Tenancies: This statement is not true. OCI Object Storage buckets and objects are specific to a tenancy and cannot be shared across different tenancies directly. Access to Object Storage resources is controlled within a single tenancy through IAM policies.
Relevant OCI Documentation:
OCI Object Storage Overview
Object Lifecycle Management

These references provide details on how Object Storage functions and the features available.

NEW QUESTION # 23
