Updated 1Z0-770 Valid Test Questions & Passing 1Z0-770 Exam is No More a Challenging Task

In the 21 Century, the 1Z0-770 certification became more and more recognized in the society because it represented the certain ability of examinees. However, in order to obtain 1Z0-770 certification, you have to spend a lot of time preparing for the 1Z0-770 Exam. Many people gave up because of all kinds of difficulties before the examination, and finally lost the opportunity to enhance their self-worth. But our 1Z0-770 exam questions will help you pass the exam for sure.

Oracle APEX Developer Professional Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which two types of pages behave similarly in functionality?

- **A. Faceted Search**
- B. Cards
- C. Map
- **D. Smart Filter**

Answer: A,D

Explanation:

Explanation

A Faceted Search and a Smart Filter are two types of pages that behave similarly in functionality. They both allow users to filter data based on multiple criteria and see the results in real time. They differ in the following aspects:

A Faceted Search uses facets to filter data. A facet is a set of filters based on a column or expression. A facet can be displayed as a list, a range slider, a star rating, or a chart.

A Smart Filter uses conditions to filter data. A condition is a logical expression that evaluates to true or false. A condition can be based on a column, an item, or a function.

The other options are incorrect because:

A Map is a type of region that displays spatial data on an interactive map. It allows users to zoom, pan, and select features on the map.

A Cards is a type of region that displays data in a grid of cards. Each card represents one row of data and can contain text, images, icons, or buttons.

NEW QUESTION # 40

Which statement is true about using SQL Commands?

- A. You can search and filter database objects.
- **B. You can unload data from the database.**
- C. You can design and prototype data models using a markdown-like shorthand syntax.
- D. In SQL Commands, you can view queries saved in Query Builder.

Answer: B

Explanation:

Explanation

Commands allow you to execute SQL statements or PL/SQL blocks to create, edit, view, run, and delete database objects. One of the features of SQL Commands is the ability to unload data from the database to a CSV file. You can do this by clicking the Download button after running a query that returns data. NEW QUESTION # 41

In APEX, you can choose which three of the following Authentication methods?

- **A. No Authentication**
- **B. Built-in Authentication Scheme**
- **C. Custom Authentication Scheme**
- D. Authorization Scheme

Answer: A,B,C

Explanation:

Explanation

In Oracle APEX, you can choose from different authentication methods to establish a user's identity and control access to your application. Authentication may require a user to provide some type of credentials, such as a user name and password, or could involve the use of digital certificates or a secure key. Three of the authentication methods that you can choose in Oracle APEX are: Custom Authentication Scheme: This method allows you to create your own authentication logic using PL/SQL code or an external web service. You can also customize the login page and session management for your application.

No Authentication (using DAD): This method adopts the current database user as the authenticated user.

This approach can be used in combination with a mod_plsql Database Access Descriptor (DAD) configuration that uses basic authentication to set the database session user.

Built-in Authentication Scheme: This method allows you to use one of the preconfigured authentication schemes that ship with Oracle APEX, such as Open Door Credentials, LDAP Directory, Social Sign-In, and so on.

NEW QUESTION # 42

Which statement is true about Theme Styles in Oracle APEX?

- A. Theme Styles in Oracle APEX determine the layout and structure of a webpage.
- **B. When the Is Public attribute is enabled, end users can choose the Theme Style from the runtime environment.**
- C. You can only enable the Is Current attribute when the Theme Style has the Read Only attribute disabled.

Answer: B

Explanation:

Explanation

Theme Styles in Oracle APEX are CSS style sheets that are added to the base CSS of a theme to alter the look and feel of an application. A theme can have multiple theme styles with one style set as current. When the Is Public attribute is enabled for a theme style, end users can choose the theme style from the runtime environment by using the Theme Style Switcher component. This allows end users to customize the appearance of the application according to their preferences. NEW QUESTION # 43

Which two statements are true about the usage of a Remote Server in the context of REST Data Sources?

- A. A single REST Data Source can use multiple remote servers.
- **B. Multiple REST Data Sources can reference a single remote server.**
- **C. The remote server determines the base URL of the REST Data Source.**
- D. The remote server should mandatorily be an APEX instance.

Answer: B,C

Explanation:

Explanation

A remote server in the context of REST Data Sources is a configuration that defines how to connect to an external server that hosts one or more REST services. The remote server determines the base URL of the REST Data Source, which is used to construct the full URL of each REST operation. Multiple REST Data Sources can reference a single remote server, which simplifies the maintenance and security of accessing external REST services.
