# Reliable 2V0-17.25 Test Simulator - 2V0-17.25 Actual Braindumps

Our company always feedbacks our candidates with highly-qualified 2V0-17.25 study guide and technical excellence and continuously developing the most professional 2V0-17.25 exam materials. You can see the high pass rate as 98% to 100%, which is unmarched in the market. What is more, our 2V0-17.25 Practice Engine persists in creating a modern service oriented system and strive for providing more preferential activities for your convenience.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 2	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 3	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 4	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.

Three Formats for VMware 2V0-17.25 Practice Tests: 2V0-17.25 Exam Prep Solutions

There have many shortcomings of the traditional learning methods. If you choose our 2V0-17.25 test training, the intelligent system will automatically monitor your study all the time. Once you study our 2V0-17.25 certification materials, the system begins to record your exercises. Also, we have invited for many volunteers to try our study materials. The results show our products are suitable for them. In addition, the system of our 2V0-17.25 test training is powerful. You will never come across system crashes. The system we design has strong compatibility. High speed running completely has no problem at all.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q43-Q48):

NEW QUESTION # 43
An administrator is tasked with deploying several VMware ESX hosts in a new VMware environment. The administrator wants to understand the general flow of a manual ESX installation and setup process in VMware Cloud Foundation (VCF).
What are the stages of the ESX deployment process?

- A. Install ESX using VCF Installer → Configure host settings → Perform hardware compatibility check → Create datastores
- B. Boot from installation media → Select target disk → Configure management network → Set root password
- C. Install vCenter Server → Configure cluster settings → Deploy ESX using VCF Installer → Create virtual machines
- D. Hardware validation → Network configuration → ESX installation → Join vCenter

Answer: B

Explanation:
The VMware Cloud Foundation 9.0 Deployment Guide and the vSphere 9.0 Installation and Setup documentation describe the standard manual ESXi installation workflow. The steps are as follows:
Boot from installation media: The host is started from the ESXi ISO image, either via physical media, virtual media through iLO/iDRAC, or PXE boot.
Select target disk: During setup, administrators select the disk or device where ESXi will be installed.
Configure management network: After installation, the Direct Console User Interface (DCUI) is used to set up basic network parameters for the management interface (IP address, DNS, gateway).
Set root password: A secure root password is set to complete the initial setup of the host.
The documentation makes it clear that these steps form the foundation before the host can be discovered and commissioned by SDDC Manager in VMware Cloud Foundation.
Option A is incorrect because the VCF Installer is not used for installing ESXi; it is used for deploying management domains and workload domains.
Option B includes "Join vCenter," which happens after commissioning, not during installation.
Option D is incorrect since vCenter Server is installed later, not during the ESXi manual setup.
Therefore, the correct stages of manual ESXi installation are: Boot media → Select disk → Configure management network → Set root password.
Reference:
VMware Cloud Foundation 9.0 Deployment Guide - ESXi Host Preparation section.
VMware vSphere 9.0 Installation and Setup Guide - "Installing ESXi" and "Configuring the Direct Console User Interface (DCUI)."

NEW QUESTION # 44
During a routine check, an administrator observes that several VMs are reporting high memory usage in VMware Aria Operations. They need to verify if the high memory usage is due to memory contention. What actions should be taken in VMware Aria Operations to verify this?

- A. Look al the network throughput.
- B. Check the memory usage and ballooning metrics.
- C. Review the CPU ready time.
- D. Analyze the storage I/O performance.

Answer: B

Explanation:
To verify if high memory usage is due to memory contention, the administrator should check the memory usage and ballooning metrics in VMware Aria Operations. Ballooning occurs when the hypervisor reclaims memory from a virtual machine due to memory contention, and monitoring these metrics can help identify whether the VMs are experiencing memory pressure or being forced to swap memory.

NEW QUESTION # 45
An administrator is preparing to create a new workload domain within an existing VCF instance.
Which two tasks must be completed before starting the deployment workflow? (Choose two.)

- A. Pre-install a supported ESX version onto the server using a valid ISO image.
- B. Commission the new ESX hosts into the existing VCF instance from the management domain vCenter.
- C. Commission the new ESX hosts into the existing VCF instance from VCF Installer.
- D. Commission the new ESX hosts into the existing VCF instance from the new workload domain vCenter.
- E. Pre-install a supported ESX version onto the server with VCF Installer.

Answer: A,B

Explanation:
All ESXi hosts must be installed with a supported ESXi version using a VMware ISO before they are commissioned into SDDC Manager. Commissioning is always performed via the management domain vCenter.

NEW QUESTION # 46
An organization requires a private cloud with robust availability and disaster recovery capabilities.
Which three VMware Cloud Foundation components should be considered for integration to meet these requirements? (Choose three.)

- A. NSX for secure and isolated networking.
- B. VMware Live Site Recovery (VLSR) for orchestrated disaster recovery.
- C. vSphere Replication for VM-level data replication.
- D. vSAN for hyper-converged storage and downtime avoidance.
- E. Aria Operations for Logs for enhanced logging and monitoring.

Answer: A,B,C

Explanation:
NSX provides network virtualization, offering secure, isolated networking that is crucial for ensuring robust availability and disaster recovery. It supports micro-segmentation and advanced network management features.
VMware Live Site Recovery (VLSR) provides orchestrated disaster recovery capabilities, enabling the organization to efficiently recover workloads and applications in case of a disaster.
vSphere Replication enables VM-level data replication, allowing for recovery and continuity of business operations by ensuring data is replicated across sites for high availability and disaster recovery.

NEW QUESTION # 47
An organization is looking to streamline its IT service delivery by automating the deployment of applications and infrastructure across its hybrid cloud environment.
Which VMware Aria Suite component should they use?

- A. Aria Operations
- B. Aria Automation
- C. Aria Operations for Logs
- D. Aria Operations for Networks

Answer: B

Explanation:

Aria Automation (formerly vRealize Automation) is designed to automate the deployment of applications and infrastructure across hybrid cloud environments. It enables the provisioning, management, and orchestration of IT services, helping organizations streamline their service delivery.

NEW QUESTION # 48
......

We know deeply that a reliable 2V0-17.25 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our 2V0-17.25 latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient VMware Cloud Foundation 9.0 Administrator study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our 2V0-17.25 Exam Material (only about 20 to 30 hours practice). High accuracy and high quality are the reasons why you should choose us.
